DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at every examination.	} See General Remarks.	During the morning, detached cumuli, fleecy clouds, and scud, covered about one-half of the sky. In the afternoon and evening it was overcast with cirrostratus and scud.
MON.	Nothing was shewn from 6h. to 8h. a.m., nor at 8h. and 12h. p.m. Positive but tension very weak at other times.	} See General Remarks.	With the exception of a few breaks about noon, and from 6h. to 8h. p.m., the sky was covered with cirrostratus and scud throughout the day. A thin rain was falling occasionally from 6h. to 9h. a.m.
TUES.	Nothing was shewn till 7h. 22m. a.m.: positive and tension very weak from that time till 2h. p.m. Positive and tension moderate from that time till midnight.	} See General Remarks.	Cirrostratus and scud covered the sky till about noon, from which time till 10h. p.m. about one-half was covered with detached cumuli, cirrostratus, and fleecy clouds. It was overcast again about midnight.
WED.	Nothing was shewn from 11h. a.m. to 10h. p.m. Positive and tension very weak at other times.	} See General Remarks.	Cirrostratus, a few light clouds, and occasionally cumuli, were scattered in various directions till 3h. p.m., when the sky became cloudless, and continued generally so till midnight.
THURS.	Positive but very weak throughout the day, except from 8h. a.m. to noon, when nothing was shewn.	} See General Remarks.	The sky was nearly cloudless throughout the day. Flashes of lightning were occasionally visible till 4h. a.m.; and at 3h. a.m. there was a thick fog, which lasted about an hour.
FRID.	Slightly positive from 3h. p.m. to 10h. p.m. Nothing was shewn at any other times.	} See General Remarks.	The sky was generally about one-half covered with detached cumuli, cirrostratus, fleecy clouds, and scud. At 3h. 20m. p.m. the arc of a very faint solar halo was visible. There were occasional flashes of lightning during the evening, some of which were very vivid.
SAT.	Nothing shewn till 2h. p.m. From 3h. p.m. to 6h. p.m. electricity very strong; at times positive, and at other times negative. Sparks abundant, currents frequent.	A cloudy sky. A thunder storm.	Cirrostratus and scud covered the sky till 8h. a.m., from which time till 2h. p.m. about one-third was covered. At 3h. 10m. p.m. rain began to fall, and was followed by the severest storm of thunder, lightning, and hail which has occurred here since the establishment of the Meteorological Observatory. The thunder was almost incessant, the lightning was extremely vivid, and the thunder followed the lightning at times, after an interval of only 1 sec. In the Park the hail stones were not remarked as being particularly large, but at Lewisham many were measured, whose dimensions were very nearly 1 inch in length, and 13 inch to 2 inches in circumference; and nearly all were as large as pigeon's eggs. There were also many irregular pieces of ice, which continued on vegetation for at least an hour after the hail had ceased falling, notwithstanding the temperature was nearly 70° during the time. The peals of thunder were heard with great frequency, many of them resembling the discharge of large pieces of artillery, till 6h. p.m., and Mr. Glushier's house was sensibly shaken many times. A great deal of glass was broken in Lewisham. So dense was the mist afterwards, that at night the lamps at Blackheath could not be seen at the distance of a few yards.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 65°5; and the mean reading at 7h. 30m. P.M., was 71°0; the mean readings at the Royal Observatory for the same times were 64°3 and 70°8 respectively.

† The mean direction of the wind for the first two days is S.W.; for the rest of the week it has been variable, but inclining towards the North.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, August 8th, 1846.*

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 31, (ending Saturday, August 1st).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
F. 3, concussion of the brain—fell from a staircase window, having been put upon the sill by another child, who had been carrying her up stairs on her back	6 hours	M. 4 hrs., injuries received in difficult labour—(no inquest).		F. newborn (unknown), wilful murder by drowning against some person or persons unknown.	
Wife of a carpenter, 67, mortification from a contused wound received by falling down stairs when in liquor	3 weeks	M. 62, { contusion of the liver from external violence	*	Son of a hatter, 10, drowned accidentally, bathing in the River Thames.....	2 days
Wife of a stage-coachman, 36, paralysis from injury to spinal cord, by accidentally falling down stairs	8 days	{ peritoneal inflammation	6 days	<i>(What kind of violence?)</i>	
Son of a coachman, 6, injuries of the body from being run over by a carriage, after falling through missing his hold of a street-cab, which he was following for amusement	*	M. 83, fracture of neck of thighbone (no inq.)	4 weeks	<i>(How was the fracture caused?)</i>	
Daughter of a coalwhipper, 2, concussion of the brain, by accidentally coming in contact with the off-wheel of a brewer's dray	instantly	Wounds:—		<i>(By what means was the abrasion caused?)</i>	
Clerk, 27, accidental death—jammed in between a railway carriage and the platform, in the act of attempting to get upon a carriage of a train in motion—fractured ribs, fractured arm, and contused thigh.....	*	M. 24, abraded cuticle—tetanus (no inquest)	*	<i>(How was the fracture caused?)</i>	
		Drowning:—		Hanging and Suffocation:—	
		Canal boatman, 35, drowning—supposed to have stumbled at the edge in running along the road, and thus to have fallen into the Paddington Canal.		F. 50, hanged herself to a bedpost in temporary insanity—feet not off the ground.	
		M. 23, accidentally drowned while bathing in the Regent's Canal—immersed.....	about 20 minutes	Daughter of a grocer, 3, suffocation from accidentally falling into a privy	
		Son of a coalheaver, 12, found dead in the River Thames, off Whipple's Wharf, Wapping, without marks—how caused no evidence.		M. under 1, suffocation from being accidentally overlaid in bed, lying between the mother and father.	
				M. 3 wks., accidentally suffocated in bed.	
				Poison:—	
				M. 33, temporary insanity—suicide with corrosive sublimate.....	
				Medicine:—	
				In Westminster Hospital, M. 37, paralysis and partial convulsions from the effects of mercury (no inquest).....	

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 69, natural—apoplexy	4 hours	F. from 55 to 60, ulceration of lungs.....	some months	F. 60, natural death from the rupture of a blood-vessel.....	survived between 3 and 4 days
M. 5 wks., natural—congestion of the brain—not under medical treatment—convulsions during past week.		(death supposed to be accelerated by want of proper nourishment and attention (p.m.)		M. 1, natural—suddenly during teething	*
M. 43, natural—pericarditis and pleuro-pneumonia—emphysema—suddenly became insensible in the street, and died instantly.		M. 36, natural—rupture of a bloodvessel while coughing	10 min.	M. 32, natural death from disease of the heart, 6 weeks	*
M. 1, convulsions following severe vomiting	*	F. 9 wks., natural death from enlargement of the mesenteric glands (post mort.)	*	M. 27, natural death—apoplexy	*
		M. 40, natural death from apoplexy	1 hour	M. 56, natural death—convulsions upon an affection of the brain	*

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

M. 56, found insensible—died in 10 hours; (1st attack—no previous illness.)

M. apparently still-born (post mort.).

### TWELVE HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H.:—	duration	Bartholomew's H.:—	duration	London H. (continued):—	duration
unilobular hernia	16 years	M. 61, malignant disease of the liver	5 years	dysentery	5 weeks
F. 51, { strangulation	*	M. 49, tubercular disease of testis, lungs, and kidney	*	M. 36, { chronic ulceration of cæcum, and commencement of colon.	*
{ operation	*	M. 27, supposed ulceration of the mucous membrane of the bowels.....	5 weeks	{ 4 or 5 large hepatic abscesses (p.m.).	*
{ peritonitis (post mort.)	*	M. 34, cholera, with ulceration of the bowels	*	M. 31, phthisis	13 months
Westminster H.:—See deaths by violence.		M. 20, paralysis	*	F. 44, ramollissement of spinal cord	5 months
Charing Cross H.:—		M. 62, paraplegia	10 days	St. Thomas' H.:—	
M. 29, { phthisis pulmonalis	8 months	{ fever	*	M. 23, consumption	*
{ tuberculous ulceration of the larynx.	*	M. 52, { slight effusion into ventricles—old adhesion of pericardium—ulceration of intestines (post mort.).	*	F. 7, scarlet fever	*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	The electricity was very strong from 9h. 10m. a.m. to 9h. 45m. a.m. Sometimes positive, and at other times negative. Currents frequent, sparks abundant. During the remainder of the day no electricity was shewn.	A thunder storm. See General Remarks.	The sky was generally covered with cirrostratus, cumulostrati, and scud till the evening, when it became partially clear. Rain was falling heavily, accompanied with thunder and lightning from 9h. a.m. to 11h. a.m.
MON.	Positive and tension weak throughout the day. The maximum at 3h. 20m. p.m.	See General Remarks.	The sky was generally covered with cirrostratus and scud till 9h. a.m.; about six-tenths were covered with cirrostratus, cumuli, and cumulostrati from that time till 5h., when it became again overcast, and continued nearly so till 11h., when the sky about the Zenith was clear. Rain was falling occasionally from 5h. to 8h. a.m.
TUES.	Positive throughout the day. Tension moderate. The maximum at 9h. 20m. a.m.	See General Remarks.	About 5h. a.m. the sky was nearly clear; with this exception it was mostly covered with cirrostratus and scud till 4h. p.m., and about one-half covered with cloud from that time till midnight. A shower of rain fell about 1h. p.m.
WED.	Nothing was shewn till 5h. a.m. Tension very strong from 6h. a.m. to 9h. 40m. p.m. The changes from positive to negative were rapid. Sparks abundant. Currents frequently shewn. From 1h. p.m. to 6h. p.m. tension very weak. Moderately active from 7h. p.m. to 9h. 30m. p.m.	See General Remarks. A thunder storm. See General Remarks. See General Remarks.	Flashes of lightning were occasionally visible till 4h. a.m. Thunder was frequently heard from 5h. a.m., and at 5h. 20m. a.m. a thunder storm began, which continued almost without intermission until 9h. 50m. p.m. The lightning was generally very vivid, and thunder was frequently heard after an interval of only one second. At 5h. 30m. a.m. rain began to fall, and continued till 9h. 10m. a.m., during which time 0.80 in. fell; it commenced again at about 11h. 45m. a.m., and continued till 9h. 26m. p.m.; between which times 0.63 in. of rain fell. The sky was generally cloudy till 2h. p.m.; variable from that time till 6h. p.m., and nearly cloudless during the remainder of the day. During the afternoon the air was very close.
THURS.	Positive and tension moderate from 11h. a.m. to 1h. p.m. At other times during the day the tension was very weak.	See General Remarks.	The sky was generally overcast with cirrostratus and scud till 11h. a.m.; soon after this time the clouds became broken, and for the remainder of the evening cumulostrati, cirrostrati, and scud were principally distributed. At 8h. 30m. p.m. clouds began to collect, and during the remainder of the day the sky was covered with cirrostratus.
FRID.	Nothing shewn till after 7h. a.m. Positive and tension moderate from 9h. a.m. to 1h. 20m. p.m. At other times the tension was very weak.	See General Remarks.	The clouds were unbroken till 9h. 50m. p.m., when small portions of clear sky were visible around the zenith. During the evening the amount of cloud was variable, cumuli, cumulostrati, and cirrostrati being principally distributed. At 9h. 20m. p.m. the sky became nearly cloudless for a short time, but before 9h. 50m. p.m. every part was overcast, and remained so till midnight.
SAT.	Nothing shewn till 7h. a.m., when it was slightly positive. During the remainder of the day the tension was at times very weak. The maximum at 7h. 20m. p.m.	See General Remarks.	Overcast with slight exceptions till after 2h. p.m. At 3h. p.m. the sky was two-thirds covered with cirrostratus and scud. Shortly after this time it again became overcast, and remained so till 8h. 50m. p.m. The clouds were extensively broken during the remainder of the day, but their amount was very variable.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 63.3; and the mean reading at 7h. 30m. P.M., was 68.8; the mean readings at the Royal Observatory for the same times were 61.6 and 67.1 respectively.

† The direction of the wind for the week was principally S.; but it was variable.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, August 15th, 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 32,

(The tabular abstract on the first page is for the week ending Saturday, Aug. 15th. The following selection of cases is made from the returns for the week ending Aug 9th.)

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging:—	duration
In Bartholomew's Hospital, M. 80, formerly a servant, the effects of fractures of his left elbow and thighbone, caused by being pushed down by a drunken man in Goswell Street (post mort.) .....	20 days	In London Hospital, wife of a weaver, 34, accidental dislocation of tarsal from metatarsal bones, succeeded by hectic fever—run over by a waggon .....	2 months	F. 40, hanged herself to a rail in a temporary state of insanity.	
In London Hospital, porter, 51, accidental—accelerated by a fall .....	*	In London Hospital, labourer, 47, fractured ribs—accidentally run over by a four-wheeled chaise .....	2 days	M. 23, hanging himself by his stockings to a beam in temporary insanity—had been dead several hours when found.	
In London Hospital, brick-heaver, 33, compound fracture of the skull by accidentally falling from a stage into a ship's hold in West India Import Dock, a projecting plank coming in contact with the pier .....	*	In Guy's Hospital, carriage maker to the Croydon Railway Company, 16, fracture of his skull by being knocked down and run over by the down express train, as he was crossing the railway at Croydon almost immediately .....		<b>Burns and Scalds:—</b>	
In London Hospital, warehouseman, 30, fracture of the spine by accidentally falling backward from a ladder, while carrying a sack of flour .....	45 hours	In London Hospital, wax bougie maker, 58, lesion of the brain from injuries to the head, and inflammation of the fore arm—how injuries were caused no sufficient evidence .....	*	In Bartholomew's Hospital, daughter of a horse-hair weaver, 3, burned by her clothes taking fire from a candle placed upon a table (at Beckford Square, St. Luke's) .....	18 hours
In London Hospital, labourer, 42, inflammation from a punctured wound in the nates, by accidentally falling on the sharp end of a punner, in excavating for a sewer .....	5 days	In London Hospital, widow of a tailor, 90, debility from old age—death accelerated by a contused wound in the head—how caused no sufficient evidence .....	*	In London Hospital, M. 7 (occupation not known), burns on divers parts of the body from his clothes accidentally taking fire from a lighted candle .....	18 hours
In London Hospital, waterman's wife, 37, accidental from a fractured thigh by a fall down a cellar .....	*	<b>Wounds:—</b>		In St. Thomas's Hospital, labourer, 32, burnt by his trousers taking fire in Barclay's brewhouse, from a lighted candle (he being intoxicated) .....	11 weeks
In London Hospital, F. servant, 16, accidental fracture of the skull by throwing herself from a second floor window of a house on fire .....	23 hours	In Guy's Hospital, labourer, 62, cutting his throat with a knife (at King Street, Walworth)—temporary insanity .....	14 hours	Daughter of a brick maker, 2, accidental death—scalded by drinking hot water from a tea kettle .....	15 hours
M. 3, injury of the brain—penetrated through the eye by an area spike, from climbing over a balcony railing. lived 3 minutes after the fall .....		<b>Drowning:—</b>		<b>Poison:—</b>	
M. 1, concussion of the brain by an accidental fall through a hole in a floor .....	9 days	M. 10, drowning, while bathing out of depth—unable to swim. (The name of the water should have been added.)		F. under 1, over-excitement of the stomach and brain, from the administration of aniseed cordial (no inquest) .....	24 days
In St. Thomas's Hospital, son of a labourer, 13, injury to his belly by being jammed between a dray and a wall (in Park Street) .....	17 hours	Apprentice to a lighterman, 16, accidentally drowned by falling off a lock-gate in the West India Docks, while walking backwards .....	under water 15 minutes	Clerk in Merchant Seamen's Office, 42, suicide by swallowing essential oil of bitter almonds, in a state of temporary insanity .....	1 hour
In Bartholomew's Hospital, son of a labourer, 15, debility caused by a pony kicking him in the face at Holloway, and rupturing an artery (post mort.) .....	13 days	Apprentice to a cabinet maker, 15, drowned accidentally—going into the Surrey Canal to bathe .....	20 mins.	Wife of a surgeon, 72, overdose of laudanum, taken by mistake .....	24 days
				Domestic servant, 35, suicide by prussic acid, taken while labouring under temporary mental derangement.	

NOTE.—24 cases were returned by the Coroner in which the causes were assigned, and 4 in which they do not appear to have been ascertained.

### TWELVE HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

St. George's II.—	duration	Charing Cross II. (continued):—	duration	Bartholomew's II.—	duration
M. 22, { fever .....	*	F. 55, { acute peritonitis .....	*	M. 3, pneumonia (inquest) .....	*
{ phthisis pulmonalis .....	*	{ double pleurisy .....	*	F. 2, fever (inquest) .....	8 days
{ pneumonia .....	*	{ pericarditis and pneumonia of the right lung (post mort.) .....	*	F. 4, scarlatina (inquest) .....	10 days
{ pneumothorax (post mort.) .....	10 days			See Coroners' Returns.	
{ disease of the heart .....	*	<b>Middlesex II.:—</b>		<b>London II.:—</b>

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each inspection throughout the day.	See General Remarks.	The sky was principally covered with cirrostratus and scud throughout the day. In the afternoon several breaks were seen in the clouds.
MON.	Positive and tension very weak till noon. From noon till 6h. p.m. tension moderately strong. From 6h. p.m. to midnight tension very weak.	See General Remarks.	The sky was covered with cirrostratus and scud throughout the day, with the exception of small intervals of time in the morning and afternoon.
TUES.	Nothing shown till 7h. a.m. During the remainder of the day the tension was moderate. The maximum at 5h. p.m.	See General Remarks.	Generally overcast till 7h. a.m.: from 9h. a.m. till 4h. p.m. about three-fourths of the sky were covered with cirrostratus and scud. A few cirri and cirro-cumuli were also seen between these times. At 5h. p.m., with the exception of a few detached cumuli, the sky was cloudless. Before 7h. p.m. it became overcast, and remained so till midnight. At 9h. 40m. p.m. rain commenced falling; fre- quent dashes of lightning were seen about this time. Showers of rain fell during the morning.
WED.	Positive and tension strong throughout the day.	See General Remarks.	Overcast with rain frequently falling till 1h. p.m.: from that time till 6h. p.m. about one-half of the sky was covered with cumuli, cirrostrati, and scud. Shortly after 6h. p.m. some beautiful spec- imens of the cirrus cloud were visible. During the remainder of the day the amount of cloud was small. Several faint meteors were seen between 4h. 40m. p.m. and 10h. p.m. Occasional dashes of lightning were visible in the N.W.
THURS.	Nothing was shown till 1h. p.m., when it was negative and active. Positive and tension moderately strong at 5h. p.m. Nothing was shown during the remainder of the day.	Rain falling See General Remarks.	About one-third of the sky was covered with cirrostratus, scud, and fleecy clouds till 5h. a.m. During the remainder of the day cumuli, cirri, cirrostratus, and scud were distributed. Showers of rain fell at 1h., 1h. 40m., and between 3h. 30m. p.m. and 5h. 10m. p.m.
FRID.	Positive and tension moderately strong till 5h. p.m. Nothing was shown after this time to midnight.	See General Remarks.	Nearly cloudless to 7h. a.m.: from that time to 1h. p.m. three-fourths of the sky were covered with cirrostrati, cumuli, and scud. At 2h. p.m. the sky was cloudless, and remained so till 7h. 30m. p.m. From 8h. p.m. to midnight three-fourths of the sky were covered with cirrostratus.
SAT.	Nothing was shown till 7h. a.m., when the tension was positive and very weak. It remained so till 2h. p.m. At 3h. p.m. it was positive, and tension moderately strong. At 5h. p.m. negative, and tension active. Nothing was shown after this time.	See General Remarks.	The amount of cloud was variable to 5h. a.m., but shortly before 6h. a.m. it became cloudless, and remained so till 10h. a.m. From that time to 10h. 40m. p.m. the sky was overcast with cirro- stratus and scud. Rain was falling frequently in the afternoon. Before 11h. the clouds suddenly cleared off in several directions. The magnets were disturbed at 11h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 58.2; and the mean reading at 7h. 30m. P.M., was 64.5; the mean readings at the Royal Observatory for the same times were 57.8 and 62.5 respectively.

† The mean direction of the wind for the week is S.S.W.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, August 22nd, 1846.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 33.

(The tabular abstract on the first page is for the week ending Saturday, Aug. 22nd. The following selection of cases is made from the returns for the week ending Aug 15th.)

## CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
In St. George's Hospital, son of a butler, 2, fracture of the skull—fell from a loft in Stratford Mews, Oxford Street, having got through the railings of the loft door. ....	35 days	In St. George's Hospital, daughter of a weaver, 13, inflammation following lacerated wound of the left knee—ran against a horse (one of two drawing a break) in Eccleston Street—the horse trampled upon and kicked deceased ( <i>post mort.</i> ) .....	23 days	M. 13, found dead in the River Thames, without marks—apparently drowned while bathing—how caused unknown ....	immersed about 3 days
In St. George's Hospital, bricklayer, 65, secondary deposits in the lungs, after amputation of left arm—fell from a scaffold when at work at a house in Gloster Terrace, Westminster ( <i>post mort.</i> ) .....	28 days	In Broad-nought Hospital, M. 26, { crushed band ..... 31 days pyæmia ..... 3 weeks hepatization of apex of right lung, purulent deposits in both lungs, and in the joints ( <i>p.m.</i> —no inq.) .....	3 weeks	M. (age not stated), found dead in the River Thames, off entrance to Regent's Canal Basin—how caused no evidence—slight bruise under right eye ....	under water about 2 hours
In St. George's Hospital, stonemason, 42, fracture of the skull and laceration of the brain—fell from a scaffold when at work at a house in Lowndes Square, Chelsea ( <i>post mort.</i> ) .....	4 days	M. 19, { phthisis ..... 11 months injury to knee and chest, with strumous constitution ( <i>no inquest</i> ) .....	*	Apprentice to a gold beater, 14, found dead in the Regent's Canal, without marks, apparently drowned—how caused unknown.	
In St. George's Hospital, M. 15, fracture of the skull—fell from a tree in Hyde Park, by the breaking of a branch, when he got up to see a review ( <i>post mort.</i> ) .....	14 days	In St. George's Hospital, coach painter, 37, compound fracture of right leg and left arm, and clavicle—several ribs broken, and other injuries—knocked down and run over by a carriage of the Great Western Railway Company, at the Paddington Station, when jumping from the tram-road, where he was painting a horse-box, as the train was backing slowly into the departure shed .....	15 mins.	<b>Hanging and Suffocation:—</b> Cooper, 56, hanged himself (in temporary insanity) with a rope, to a rafter of a cooper's shed—found hanging with one foot resting on a cask—had made a previous attempt to hang himself.	
Son of a plasterer, 13, fracture of the spine—fell when at play on a platform of an unfinished house (in Lowndes Square) .....	instantly	Wounds:— In St. George's Hospital, son of a gardener, 14, compound comminuted fracture of the frontal bone—the barrel of an overcharged pistol recoiled on being discharged by deceased, at a mark in a garden adjoining Fulham Road, and struck him—the stock of the pistol shattered to pieces ( <i>post mort.</i> )	13 days	M. 74, hanged himself to a bedstead in temporary insanity.	
In St. George's Hospital, wife of a carpenter and joiner, 57, delirium tremens—from intoxication, and accelerated by a fall down stairs, in Church Street, Chelsea, when intoxicated .....	4 days	In St. George's Hospital, son of a gardener, 14, compound comminuted fracture of the frontal bone—the barrel of an overcharged pistol recoiled on being discharged by deceased, at a mark in a garden adjoining Fulham Road, and struck him—the stock of the pistol shattered to pieces ( <i>post mort.</i> )	13 days	Gentleman's servant, 29, suicide by hanging himself, being insane.	
delirium tremens ( <i>post mort.</i> ) .....	3 days	<b>Drowning:—</b> Son of a cook, 8, drowning—fell into the Grosvenor Canal, when at play with a barge at St. George's Wharf. ....	under water about 25 min.	Son of a ladder-maker, 3 wks., accidentally suffocated by his mother's arms, during sleep.	
In St. George's Hospital, daughter of a labourer, 17, fracture of left arm, and leg, and pelvis; and other injuries—threw herself from a window in Lower Belgrave Street, in a state of temporary insanity, caused by grief, (having been told her mother was dead, <i>p.m.</i> )	50 days	Son of a tripe-boiler, 14, drowned when bathing in a pool of water formed by the foundation of the Old Junction Water Works, in the waste ground adjoining Commercial Road, under water 15 minutes		Daughter of a brickmaker's labourer, 11 mon., accidental suffocation—found dead lying on her face, in the bed of her parents.	
M. 10 wks., { fell on the head ..... 16 days { effusion on the brain ( <i>no inquest</i> ) 13 days		Son of a coalheaver, 6, no evidence as to the cause of death (found dead in the River Thames, off the White Ferry House).		Porter, 25, inhaling noxious gases, generated by charcoal incautiously placed in his bedroom by a servant—supposed to produce apoplexy—(found in an insensible state in his bed)	died in abt. 7 hrs.
Ironmonger, 35, concussion of the brain from falling down stairs when intoxicated. ....	34 hours	Son of a tobacconist, 12, drowning—found in the River Thames—supposed to have fallen from the Adelphi Pier. ....	under water about 2 hours	—(found in an insensible state in his bed)	died in abt. 7 hrs.
Son of an engineer, 15, concussion of and rupture of a vessel on the brain by falling from a house accidentally. ....	*	Labourer, 15, drowned himself, but in what state of mind no evidence ( <i>post mort.</i> )		<b>Burns and Scalds:—</b> Son of a labourer, 5, burn of the body and left arm—bedgown took fire from a fire in the grate, when standing in the fender at play	abt. 16 hrs
Daughter of a shoemaker, 7 mon., concussion of the brain, and shock of system—fell out of the staircase window from the arms of her sister (who tripped, and fell down stairs)	1 day	Sailor, 21, accidentally drowned by falling off the ship "Galina," into the River Thames immersed between 3 and 4 days		M. 1, { scald on the chest ..... 5 weeks { marasmus ( <i>no inquest</i> ) .....	*
In St. George's Hospital, labourer, 50, abscess in the abdomen from ruptured bladder, caused by blows in a fight with John Gibbs, at Fulham, both intoxicated—manslaughter against John Gibbs ( <i>post mort.</i> ) .....	23 days	Wife of a labourer, 29, found drowned—apparently in the water a few minutes		<b>Poison:—</b> Daughter of an ornamental confectioner, 17, suicide by taking Scheele's Green, in temporary insanity. ....	16 hours
In St. George's Hospital, son of an upholsterer, 12, ruptured liver—knocked down and run over by a cabriolet and one horse, when running from the back of a carriage, on which he had been riding ( <i>post mort.</i> ) .....	3 days			Wife of a baker, 51, temporary insanity—suicide with essential oil of bitter almonds (previously attempted to poison herself)	abt. 30 mins.
				Assistant to a surgeon, 30, suicide by morphia, whether of sound mind at the time not known.	
				Wife of a tailor, 21, oxalic acid—not known under what circumstances swallowed—certain predilections of a design to commit suicide .....	*
				Son of a teacher, 9 wks., medicine containing opium, administered by mistake .....	8 hours
				<b>Medicine:—</b> M. 1, death accelerated by repeated doses of opiate, administered in small quantities ..	*

TWELVE HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

<i>St. George's II.:</i> —	<i>duration</i>	<i>University College II. (continued):</i> —	<i>duration</i>	<i>Bartholomew's II. (continued):</i> —	<i>duration</i>
M. 64, dropsy and diseased heart	.....	M. 38, delirium tremens	5 days	F. 45, { strangulated femoral hernia.	*
F. 48, encephaloid tumor of the neck, extending into thorax	.....	M. 45, { bronchitis	1 month	operation	*
F. 24, { continued fever	about 5 weeks	M. 45, { anasarca—ascites	13 weeks	rupture of the intestine and peritonitis	48 hours
ulceration of the bowels ( <i>post mort.</i> )	.....	Bright's disease	*	<i>London II.:</i> —	
F. 33, { scirrhus uteri	10 months	<i>Fever II.:</i> —		hemiplegia	*
low peritonitis ( <i>post mort.</i> )	about 2 weeks	F. 26, { fever	2 weeks	M. 47, { right hemisphere completely broken	*
See Coroners' Returns.		(from Aylesbury Place, Clerkenwell.)		down by effusion of large clot of blood into its substance ( <i>p.m.</i> )	1 day
<i>Westminster II.:</i> —		<i>Small Pox II.:</i> —No deaths registered.		M. 44, ascites	*
M. 21, fever	14 days	<i>King's College II.:</i> —		M. 50, epilepsy	*
M. 65, encephaloid disease of the neck	9 months	M. 31, phthisis	*	<i>St. Thomas' II.:</i> —

F. 20, fever	8 days	<i>Bartholomew's II.:</i> —		cough	1 year
<i>Charing Cross II.:</i> —		M. 53, laryngitis	*	M. 40, phthisis ( <i>post mort.</i> )	20 months
M. 43, disease of the aortic valves, and granular disease of the liver ( <i>post mort.</i> )	1 year	M. 13, { pneumonia	10 days	F. 17, { suppuraton of the glands of the neck	16 months
<i>Middlesex II.:</i> —		{ peritonitis, with pleuritis	3 or 4 days	mortification of bedsores.	
M. 31, apoplexy	*	M. 19, (cause of death unknown.)	*	F. 52, febris—diarrhoea	*
M. 31, (cause of death not yet returned.)	*	M. 46, disease of the knee joint	*	F. 24, phthisis ( <i>post mort.</i> )	*
<i>University College II.:</i> —		F. 37, (cause of death unknown.)	*	F. 17, pneumonia—laryngitis	*
M. 56, { pleuro-pneumonia	12 days	F. 39, cavities in right lung—disease of the kidneys.	ill 2 years	<i>Dreadnought II.:</i> —See Coroners' Returns.	
hepatitis of heart	many years	F. 23, phthisis	*	The Returns from Guy's Hospital are imperfect, and are therefore discontinued for the present.	

DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, ETC.

Small Pox:—	duration	Diarrhœa (continued):—	duration	Other cases of diarrhœa not enumerated under this head in abstract.	Cholera (continued):—	duration
M. 7 weeks, confluent small pox (not vaccinated) .....	10 days	F. 7 mon., diarrhœa .....	3 weeks		In Cross-st. East, New-road, Woolwich, daughter of a smith, 1, cholera .....	5 days
F. 2, variola .....	*	M. 6 mon., natural death from diarrhœa (inquest) .....	5 weeks	F. 27, { phthisis .....	In Greenwich Hospital, pensioner, 73, cholera .....	3 days
F. 1, small pox (not vaccinated) .....	*	F. under 1, diarrhœa .....	3 weeks	F. 45, { chronic bronchitis .....	In St. John's Place, Lower Wandsworth Road, Battersea, widow, 80, cholera .....	2 days
Vaccinia:—		M. 3 mon., diarrhœa .....	3 weeks	F. 45, { diarrhœa .....	apoplexy .....	1 day
F. 5 mon., { vaccination .....	19 days	subsequently inflammation of the leg, and disease of the wrist joint .....	*	M. 69, { diarrhœa .....	Other cases, not assigned to Cholera in abstract:—	
F. 5 mon., { dysentery .....	10 days	M. 40, { diarrhœa .....	3 days	F. 1, { teething followed by whooping-cough, upwards of 6 mo. diarrhœa .....	In Grove-terrace, Kentish-town, spinster, 75, disease of the heart .....	of long standing
Diarrhœa:—		M. 7 weeks, diarrhœa .....	3 days	M. 10 mon., { diseased mesenteric glands .....	English cholera .....	2 days
M. 11 wks., diarrhœa and general atrophy .....	*	M. 1, { teething .....	4 months	M. 1, { inflammation of lungs .....	In New Nichol Street, Hackney Road, daughter of a weaver, 4, pneumonia .....	3 weeks
M. 5, diarrhœa (p.m.) .....	12 days	M. 1, { diarrhœa .....	*	M. 1, { diarrhœa .....	typhus .....	2 weeks
M. 4 mon., violent diarrhœa .....	*	M. 1, diarrhœa .....	*	F. 10 mo., { bronchitis—pertussis .....	English cholera .....	2 days
F. 10 wks., diarrhœa .....	*	F. 17 days, { diarrhœa .....	13 days	F. 7 mo., { diarrhœa—convulsions .....	In Chelsea Workhouse, a female inmate, 43, cholera .....	10 days
M. 20 wks., diarrhœa .....	3 months	M. 4 mon., { diarrhœa .....	1 day	F. 7 mo., { diarrhœa—convulsions .....	chronic enteritis, diseased liver (post mort.) .....	*
F. 53, diarrhœa .....	7 days	M. 4 mon., { diarrhœa .....	1 week	F. 10 wks., { diarrhœa .....	In Tyler-st., district of Golden-sq., wife of a fruiterer, 54, rheumatism .....	*
M. 20 days, diarrhœa and vomiting—exhaustion .....	*	M. 6 mon., { diarrhœa .....	2 months	F. 10 wks., { diarrhœa .....	cholera Anglica .....	2 days
F. 1, diarrhœa—convulsions .....	*	M. 1, diarrhœa .....	2 months	F. 9 mon., { diarrhœa .....	In George Street, Church district, Bethnal Green, labourer, 29, diseased heart .....	*
F. 1, diarrhœa .....	*	M. 4 mon., diarrhœa .....	4 days	F. 8 mon., { diarrhœa .....	cholera (English) .....	1 day
M. 12 wks., diarrhœa .....	4 days	M. 1, { dentition .....	7 days	F. 60, { diarrhœa .....	Syphilis:—	
M. 10 wks., diarrhœa .....	14 days	M. 1, { diarrhœa .....	16 days	F. 60, { diarrhœa .....	F. 4 mon., syphilis .....	from birth
F. 1, { diarrhœa .....	3 weeks	M. 5 mon., diarrhœa .....	1 week	F. 60, { diarrhœa .....	F. 8 days, premature birth—secondary symptoms of venereal disease .....	*
M. 6 mon., diarrhœa .....	5 days	F. 6 mon., fever and diarrhœa, 6 weeks .....	6 weeks	F. 60, { diarrhœa .....	M. 10 wks., { syphilis, syphilitic lepra .....	from birth
E. 73, diarrhœa .....	5 days	F. 4, diarrhœa .....	*	F. 60, { diarrhœa .....	F. 11 wks., { syphilis .....	congenital
M. 1, diarrhœa .....	*	M. 2 mon., diarrhœa .....	*	F. 60, { diarrhœa .....	ulceration about the groin .....	10 days
M. 4 mon., collapse after diarrhœa .....	*	M. 7 weeks, diarrhœa .....	3 days	F. 60, { diarrhœa .....	F. 30, { syphilis .....	1 year
F. 6 mon., diarrhœa caused by teething .....	*	M. 1 mon., diarrhœa .....	1 week	F. 60, { diarrhœa .....	bronchitis .....	4 weeks
M. 14 days, diarrhœa—convulsions .....	4 days	M. 1, diarrhœa .....	2 weeks	F. 60, { diarrhœa .....	Hæmorrhage:—	
M. under 1, diarrhœa .....	*	M. 3 weeks, diarrhœa .....	2 weeks	F. 60, { diarrhœa .....	M. 79, natural—hæmorrhage from the lungs, from the rupture of a blood-vessel (inquest) .....	5 min.
F. 8 mon., { diarrhœa .....	8 days	M. 1, { diarrhœa .....	6 weeks	F. 60, { diarrhœa .....	F. 20, inflammation of the face—violent hæmorrhage .....	4 days
F. 8 mon., { diarrhœa .....	8 days	M. 1, { diarrhœa .....	1 week	F. 60, { diarrhœa .....	Malformation:—	
M. 3 mon., diarrhœa and exhaustion .....	2 or 3 weeks	M. 1, diarrhœa .....	7 weeks	F. 60, { diarrhœa .....	No deaths from this cause.	
F. 10 wks., diarrhœa .....	6 weeks	M. 6 weeks, diarrhœa .....	15 days	F. 60, { diarrhœa .....	Hernia:—	
M. 5 mon., diarrhœa .....	*	M. 4 mon., { diarrhœa .....	5 days	F. 60, { diarrhœa .....	F. 67, femoral hernia .....	*
M. 10 wks., diarrhœa .....	5 days	F. 1, diarrhœa .....	8 days	F. 60, { diarrhœa .....	F. 59, strangulated femoral hernia, 5½ days .....	5½ days
M. 2, diarrhœa .....	14 days	M. 7 mon., { diarrhœa .....	3 weeks	F. 60, { diarrhœa .....	F. 26, rupture—inflammation of the bowels .....	2 days
F. 2 mon., bowel complaint .....	*	F. 62, diarrhœa .....	1 week	F. 60, { diarrhœa .....	effusion on the brain .....	*
M. 77, diarrhœa .....	*	F. 1, { diarrhœa .....	9 weeks	F. 60, { diarrhœa .....	M. 3 mon., { convulsions .....	from birth
M. 3 mon., diarrhœa .....	4 days	M. 75, diarrhœa—old age .....	*	F. 60, { diarrhœa .....	hernia .....	congenital
M. 2 mon., diarrhœa .....	6 weeks	M. 11 mon., diarrhœa .....	4 days	F. 60, { diarrhœa .....	F. 2 days, umbilical hernia .....	*
M. 3 mon., diarrhœa .....	2 weeks	M. 1, diarrhœa .....	3 days	F. 60, { diarrhœa .....	F. 77, strangulated femoral hernia, 7 days .....	7 days
F. 6 mon., diarrhœa .....	14 days	F. 1, { diarrhœa .....	2 days	F. 60, { diarrhœa .....	See Hospitals.	
E. 9 weeks, diarrhœa .....	3 weeks	M. 11 days, diarrhœa .....	7 days	F. 60, { diarrhœa .....	Stone:—	
M. 1, diarrhœa .....	5 weeks	F. 1, diarrhœa .....	2 months	F. 60, { diarrhœa .....	M. 79, granular disease of kidneys, and chronic inflammation of bladder with calculus .....	*
F. 1, diarrhœa .....	*	F. 1, chronic diarrhœa .....	*	F. 60, { diarrhœa .....	Childbirth:—	
F. 10 mon., diarrhœa æstiva .....	*	F. 2 mon., diarrhœa .....	*	F. 60, { diarrhœa .....	exhaustion from excessive vomiting during pregnancy .....	5 months
M. 7 mon., { diarrhœa .....	4 days	F. 36, diarrhœa .....	14 days	F. 60, { diarrhœa .....	F. 38, { puerperal mania, 11 days after confinement .....	11 days
M. 7 mon., { diarrhœa .....	4 days	M. 5, diarrhœa .....	5 months	F. 60, { diarrhœa .....	F. 42, fever after delivery of twins (one born 1st Aug., the other 2nd Aug.), both still born .....	*
M. 8 weeks, diarrhœa .....	10 days	M. 15 days, diarrhœa .....	7 days	F. 60, { diarrhœa .....	diarrhœa on the 9th day after parturition of a child at 8 months .....	8 months
M. 4 mon., diarrhœa .....	*	M. 10 mon., diarrhœa .....	*	F. 60, { diarrhœa .....	diarrhœa (from chronic disease of bowels) .....	6 weeks
M. 11 mon., diarrhœa .....	5 days	F. 5 mon., { diarrhœa .....	4 weeks	F. 60, { diarrhœa .....	F. 33, { parturition .....	9 days

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at 1h. 5m. p.m. The tension was very weak at other examinations.	See General Remarks.	With the exception of some small breaks that occurred occasionally, the sky was overcast throughout the day; the prevailing clouds were cumuli, cirrostrati, and scud.
MON.	Nothing was shown till 9h. a.m., when the electricity was positive and tension moderate. It continued at nearly the same tension till 5h. p.m. The tension was very weak after this time.	See General Remarks.	Till 5h. 20m. a.m. about two-thirds of the sky was covered; from this time till 5h. 30m. p.m. the sky was nearly overcast; cloudless afterwards till 10h. p.m.; then overcast again till midnight; cirrostrati, scud, and heavy clouds were the prevailing classes.
TUES.	Positive and tension very weak from 11h. a.m. till 5h. p.m. Nothing was shown at other times.	See General Remarks.	Overcast till 6h. a.m.; the amount of cloud was afterwards variable till 3h. p.m.; overcast till 11h. p.m.; then nearly cloudless till midnight; cumuli, cirrostrati, and scud were the prevailing clouds. Rain was falling from 5h. 20m. till 6h. 30m. a.m.; at 5h. 30m. p.m.; and at 8h. 30m. p.m.
WED.	Nothing was shown till 1h. p.m., when the electricity was negative with moderately strong tension. From 9h. 47m. p.m., till 3h. 10m. p.m. the electricity was very active. Sparks abundant. The changes from positive to negative were frequent. Galvanic currents were also shown.	Occasional thunder with rain falling.	The sky was overcast throughout the day, with the exception of breaks about noon. The prevailing clouds were cumuli, cumulostrati, cirrostrati, and scud. Thunder was heard frequently from 2h. 30m. till 3h. 30m. p.m., accompanied with a shower of rain. (See Electrical Observations.)
THURS.	Nothing was shown till 5h. a.m., when it was positive and tension moderate; it remained at about the same tension till midnight. The maximum at 9h. 20m. p.m.	See General Remarks.	Overcast throughout the day. The prevailing clouds were cirrostratus and scud: rain began to fall at 2h. p.m., and with slight intermissions continued falling heavily till 10h. p.m.
FRID.	No electricity was shown during the day, except at 1h. 20m. a.m., 9h. a.m., and 11h. a.m., and at 11h. p.m.	See General Remarks.	The sky was covered till 2h. p.m., when the clouds became extensively broken, and shortly afterwards it became cloudless, and remained so till near midnight, when it was overcast; cirrostrati, cumuli, nimbi, and scud were the prevailing clouds. A thin rain was falling at 5h. a.m.
SAT.	Positive and tension very weak throughout the day. The maximum took place at 1h. a.m.	See General Remarks.	With few exceptions the sky remained overcast till after 1h. p.m. From that time till about 7h. p.m. the sky was one-half covered with cumuli, cumulostrati, and cirrostrati. Shortly after 7h. p.m. it became cloudless, and remained so till midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Saunders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 57.9; and the mean reading at 7h. 30m. P.M., was 62.1; the mean readings at the Royal Observatory for the same times were 57.3 and 60.4 respectively.

† The mean direction of the wind for the first five days was S.W., and for the remainder of the week N.

*During the Week ending Saturday, August 29th, 1846.*

Deaths registered in this the ninth week of the third quarter, and in each of the corresponding weeks of the same quarter of the six preceding years:—

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 34,

(The tabular abstract on the first page is for the week ending Saturday, Aug. 29th. The following selection of cases is made from the returns for the week ending Aug. 22nd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Wounds:—	Drowning (continued):—	duration

 M. 77, { calculus in the kid-  
 neys ..... probably 50 yrs.  
 ischuria renalis ..... 1 week  
 diarrhoea (post mort.) 3 days

**Childbirth.:**—  
 F. 41, presentation of placenta  
 previous to delivery—ex-  
 haustion after delivery .....  
 F. 36, typhus fever 10 days after  
 childbirth .....  
 F. 28, softening; rupture of the  
 uterus during parturition  
 (post mort.) ..... 12 hours

**Delirium tremens.:**—  
 M. 37, delirium tremens .....  
 M. 37, delirium tremens ..... 3 days  
 M. 63, { rheumatism .....  
 delirium tremens ..... 6 days  
 (assigned to rheumatism in abstract.)  
**Intemperance.:**—  
*(See Coroners' Returns.)*

**RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.**

F. 20 weeks, intestinal irritation ..... 4 days  
 M. 64, empyema ..... about 21 days  
 M. 61, { hypertrophy and dilatation of both  
 ventricles of the heart .....  
 congestion of lungs and anasarca ..... 5 months  
 disease of the sternum ..... 2½ years  
 F. 59, suffocation by abscess opening into the  
 lung .....

F. 5, tuberculous deposit in lungs and abdomen .....  
 M. 3 weeks, pneumonia ..... 10 days  
 M. 77, { paralytic disease of the heart ..... many years  
 apoplexy ..... 5 days  
 F. 56, apoplexy ..... 41 hours  
 M. 11, { pericarditis ..... 5 years  
 effusion—abscess situated under the  
 diaphragm .....

F. 1, hydrocephalus ..... 3 weeks  
 M. 46, { calcareous and ossific deposit in the  
 tricuspid valves and aorta—loss of  
 elasticity .....  
 ascites and anasarca .....  
 M. 8, strumous disease of bowels ..... 3 months  
 F. 52, { cauter (encephaloid) of uterus ..... 2 to 3 years  
 drowsy ..... 2 weeks

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 29th August, 1846.

Day.	Phase of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND							Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																														
			Dry			Dew Point	Highest in the sun, as shown by a self-registering Thermometer	Lowest on the grass, as shown by a self-registering Thermometer	In the Water of the Thames at Greenwich, by the self-registering Thermometer, read at 9 o'clock next morning		Mean of 12	Greatest	Least	General Direction			Pressure in lbs. on the square foot			Amount of Horizontal Movement of the Air in each day																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																			
			Highest from 12 Obs.	Lowest from 12 Obs.	Mean from 12 Obs. DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shewn during the day.	See General Remarks.	The sky was generally overcast with cirrostratus and scud throughout the day. At 11.50m. p.m. a few drops of rain fell.
MON.	With the exception of positive electricity of very weak tension at 11h. a.m., nothing was shewn during the day.	See General Remarks.	With few exceptions the sky was overcast throughout the day. A thick misty rain fell at 2h. 10m. a.m. In the afternoon and evening the clouds were broken. The magnets were disturbed before midnight.
TUES.	Nothing was shewn till 9h. a.m., when the electricity was positive and tension moderate. At 11h. a.m. weak; positive electricity was shewn—nothing was shewn during the remainder of the day.	See General Remarks.	The sky became cloudless soon after 6h., and remained so till 5h. a.m., when it became cloudy, and with the exception of small breaks that occurred at intervals, it remained so throughout the day. The prevailing clouds were cumuli, cumulostrati, cirrostratus, and fleecy clouds. The magnets were much disturbed from 6h. a.m. till 6h. a.m.
WED.	No electricity was shewn during the day.	See General Remarks.	The amount of cloud was variable till 7h. a.m., when the sky became overcast, and continued so until 4h. p.m. The amount was again variable afterwards till midnight. The prevailing clouds were cirrostratus and scud. The magnets were disturbed between 7h. a.m. and 5h. a.m., and slightly during the evening.
THURS.	No electricity was shewn during the day, except at 1h. a.m., and at 1h. p.m.	See General Remarks.	The sky was overcast till 3h. a.m.; from this time till noon about three-fourths were covered; the amount was small till midnight, being about one-third. The prevailing clouds were cumuli, cirri, and fleecy.
FRID.	With the exception of positive electricity of weak tension at 11h. a.m. and 5h. p.m., nothing was shewn throughout the day.	See General Remarks.	Overcast till 5h. a.m.; throughout the remainder of the day till 4h. p.m. one-half the sky was covered; cloudless afterwards till midnight. Cumuli, cirrostratus, scud, and light clouds were the order that prevailed. From noon till 2h. 30m. p.m. a coloured solar halo was visible, whose radius was 23°. The magnets were disturbed.
SAT.	No electricity was shewn till 2h. 30m. p.m., when thunder was heard in the S.E.; strong electricity was shewn at this time, accompanied with frequent sparks and galvanic currents; the electricity was nearly constant till 5h. 30m. p.m., and was negative. Nothing was shewn during the remainder of the day till near midnight, when it was slightly positive.	See General Remarks.	With slight exceptions the sky was overcast till 9h. a.m.; from this time till 7h. p.m. about three-fourths were covered; nearly cloudless till 10h. 30m. p.m.; overcast afterwards till midnight. The prevailing clouds were cumuli, cirrostratus, and scud; at 2h. 30m. p.m. thunder was heard, accompanied with heavy rain (see Electrical Observations), and rain fell frequently afterwards during the afternoon. At midnight the magnets were disturbed.

The height of the eistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 59.4; and the mean reading at 7h. 30m. P.M., was 63.1; the mean readings at the Royal Observatory for the same times were 58.5 and 61.0 respectively.

† The mean direction of the wind for the week is N.N.E.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, September 5th, 1846.*

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 36.]

Causes of Death	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 35,

(The tabular abstract on the first page is for the week ending Saturday, Sept. 5th. The following selection of cases is made from the returns for the week ending Aug. 29th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Drowning (continued):—	duration
M. 44, fall from an omnibus in a fit of apoplexy, died immediately		M. supposed to be 18, found drowned. (The name of the river or other water should have been stated.)		Apprentice seaman, 15, drowned by falling out of a ship's boat into the River Thames, under water $\frac{1}{2}$ hr.	
Ostler, 49, fracture of five ribs—rupture of pulmonary artery, and laceration of the pericardium—fell when stepping from the box of a break in the high road, Knights- bridge, and died .....	instantly (post mort.)	Son of a broker, 11, accidentally drowned in the River Thames, while jumping from one barge to another .....	under water 8 hours	Waterman, 22, drowned by falling off a lighter into the River Thames accidentally, under water 4 ds.	
Carpenter, 45, inflammation of the brain by a fall from a cart upon his head accidentally 36 hours		Apprentice to the sea service, 17, accidentally drowned in the London Docks, while step- ping from one ship to another, under water <i>abt.</i> 5 mins.		Hanging and Suffocation:— Greengrocer, 30, suicide by hanging himself with a cord, being of unsound mind.	
F. 73, concussion and compression of the brain, (no inquest—an imperfect return)		Son of a waterman, 9, accidentally drowned by falling into the River Thames .....	under water 3 days	Poison:— F. domestic servant, 21, some narcotic poison —but how taken no sufficient evidence— (post mort.) .....	about 7 hours

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	<i>duration</i>		<i>duration</i>		<i>duration</i>
In the House of Correction, prisoner, formerly a cutler, 45, water on the chest, produced by disease of the lungs ( <i>post mort.</i> ) . . . . .	3 days	In Wapping workhouse, son of an engineer, 9 mon., natural death from choleric fever—(admitted in a dying state). . . . .	about 14 days	In district of Shadwell and Wapping, widow of a grocer (deceased), 48, exhaustion consequent upon bilious cholera . . . . .	14 days
F. 17, natural from syncope—from enlargement of the heart ( <i>post mort.</i> ) . . . . .	of long standing	F. 76, natural from internal hæmorrhage from the rupture of a blood vessel . . . . .	25 mins.	neglected in consequence of her disinclination to call in medical advice sufficiently early.	
M. 3 weeks, natural—suddenly in convulsions, 15 mins.		F. 5 mon., natural death—hooping cough . . .	*	M. 45, apoplexy . . . . .	*

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

M. 63, natural—no medical attendant.....	duration	M. about 55, natural death by the visitation of God ....	duration
	sudden		*

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's II.:—	duration	Fever II.:—	duration	Bartholomew's II. (continued):—	duration
M. 26, { phthisis pulmonalis .....	*	{ scarlatina maligna .....	*	F. 21, enlarged liver, with tubercles, and ulceration of colon .....	*
M. 10, { ulceration of the bowels, connected with tubercular deposits (p.m.) .....	1½ year	M. 16, { extensive sloughing of tonsils—injec- tion of aorta and large blood vessels, from St. Mary's, Newington (p.m.) .....	12 days	F. 14, disease of the heart .....	*
M. 19, { struma—disease of tarsus .....	1 year	M. 16, { congestion of cerebrum—extensive ulceration of ilium—in hospital 7 days—from Theobald's Road (p.m.) .....	*	London II.:—	
F. 40, phthisis .....	*	F. 60, { fever .....	*	M. 52, erysipelas .....	*
Westminster II.:—		F. 17, { laryngitis—ulcers about the rima glot- tidis—ulceration of ilium—death by suffocation—in hospital 14 ds., (p.m.) .....	30 days	M. 60, diseased liver .....	10 months
M. 65, fever (post mort.) .....	10 days	Small Pox II.:—No deaths registered.		M. 76, abscess in the arm .....	*
M. 52, fever (post mort.) .....	*	King's College II.:—No deaths registered.		M. 27, disease of the windpipe .....	*
F. 67, scirrhus of the uterus (post mort.) ....	6 months	Bartholomew's II.:—		F. 31, erysipelas .....	10 days
Charing Cross II.:—		M. 41, diseased heart and dropsy .....	*	F. 34, valvular disease of the heart (post mort.)	2 days
F. 22, typhus fever .....	2 weeks	M. 54, ascites, with enlarged liver .....	5 months	F. 35, dropsy .....	*
Middlesex II.:—No deaths registered.		F. 28, diarrhoea—ulceration of the bowels 4 or 5 months		St. Thomas II.:—	
University College II.:—		F. 36, tumor on the back—sloughing.....	*	M. 37, ascites from enlarged spleen and small contracted liver (post mort.) .....	3 months
M. 37, { carcinoma of brain .....	*			M. 21, phthisis, terminating in pneumothorax	*
M. 72, enlarged prostate—paralysis of bladder	*			F. 23, enteritis chronica (post mort.) .....	5 years
				F. 12, pericarditis, pneumonia, phthisis .....	*
				Guy's II.:—	
				M. 48, malignant disease of pylorus .....	*
				F. 15, tubercular deposit on the brain, with effusion into the ventricles .....	*
				F. 25, consumption .....	*
				Dreadnought II.:—No deaths registered.	

DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, SYPHILIS, ILEORRHAGE, MALFORMATION, HERNIA, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, ETC.

Small Pox:—		Diarrhœa (continued):—		Dysentery:—	
	duration		duration		duration
F. 5, confluent small pox	3 weeks	M. 72, diarrhœa and climacteric decay	*	M. 76, dysentery	25 days
M. 1, swine pox	3 weeks	M. 8 months, { diarrhœa	3 weeks	F. 27, dysentery	3 months
Diarrhœa:—		M. 1, diarrhœa	1 week	M. 2, dysentery	3 months
M. 18 days, diarrhœa	10 days	F. 1 month, diarrhœa	6 days	F. 6 months, general debility—dysentery	3 weeks
M. 4 months, diarrhœa	probably 1 month	M. 10 months, { diarrhœa	10 days	M. 11, { diarrhœa	more or less during life
F. 8 months, marasmus—diarrhœa	14 days	M. 24 days, diarrhœa	4 days	F. 74, { diarrhœa	20 days

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shewn during the day.	} See General Remark..	The sky was overcast with cirrostratus till 11h. 30m. a.m., at which time the clouds became broken in the N. and N.W. In the afternoon and evening it was generally clear, the prevailing clouds being cirri, cirrocumuli, and cymoid cirri.
MON.	With exception of a short time between 3h. p.m. and 5h. p.m., no electricity was shewn throughout the day.	} See General Remarks.	The sky remained nearly cloudless till 2h. a.m.: from that time till 6h. a.m. about three-fourths were covered with cirrostratus and light fleecy clouds. A few cirrocumuli were seen at 5h. a.m. Between 1h. a.m. and 3h. p.m. the sky was nearly cloudless, but during the evening at least one-half was covered with cirrostratus, cumuli, and scud. It became overcast at 10h. 10m. p.m., and remained so till midnight.
TUES.	At 11h. a.m. the electricity was positive but very weak. At other times during the day nothing was shewn.	} See General Remarks.	The sky remained overcast with cirrostratus and scud till 6h. 30m. p.m., when the clouds became broken in the zenith, and at 8h. 50m. p.m. a large portion was free from cloud. It was nearly cloudless till 11h. p.m., shortly after which time cirrostratus and scud suddenly collected and covered the sky during the remainder of the day.
WED.	Nothing was shewn till 11h. a.m., when the electricity was positive and very weak. It remained so till 3h. p.m. Slightly positive between 7h. and 9h. p.m.	} See General Remarks.	Masses of scud covered about one-third of the sky till 1h. a.m., when it became overcast, and continued so till 9h. a.m. It was generally cloudless afterwards during the day.
THURS.	At 1h. p.m. slight positive electricity was shewn. Nothing at other examinations.	} See General Remarks.	Cloudless during the day.
FRID.	Nothing was shewn till 1h. p.m., when it was positive and very weak. It continued so during the remainder of the day.	} See General Remark..	The sky was cloudless till 9h. a.m.: cumuli, cirrostratus, and scud then covered about one-half of the sky till 4h. p.m., when it again became clear, and continued so till midnight. The magnets were disturbed.
SAT.	Nothing was shewn till 2h. p.m. Positive and moderately active from that time till midnight.	} See General Remarks.	The sky became overcast soon after midnight, and continued so till 5h. 30m. a.m.: very variable from that time till noon, and cloudless during the remainder of the day, except about midnight, when it was nearly overcast. The magnets were disturbed throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 29h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 54.4; and the mean reading at 7h. 30m. P.M., was 64.1; the mean readings at the Royal Observatory for the same times were 53.3 and 61.7 respectively.

† The mean direction of the wind for the week is N.N.E.

A TABLE OF  
Births and Deaths registered in the Metropolis,  
During the Week ending Saturday, September 12th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 37.]

Causes of Death	Age			Total	Weekly Average derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 36,

(The tabular abstract on the first page is for the week ending Saturday, Sept. 12th. The following selection of cases is made from the returns for the week ending Sept. 5th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning and Immersion (continued):	duration
Bricklayer, 20, killed by falling from a window while intoxicated .....	*	In University College Hospital, carman, 42, crushing of the chest and belly by a van—riding on the shaft .....	1 hour	Son of an engineer, 13, accidentally drowned whilst bathing in the River Thames at Woolwich.	
F. 42, threw herself from a window, and received a mortal blow on her head, which killed her on the spot—in a state of insanity.		In University College Hospital, widow of a gunsmith, 74, compound fracture of the bones of the right leg, caused by the overturning of a phaeton .....	*	In London Hospital, wife of a barge carter, 38, poisonous effects of venous blood circulating through the system, caused by immersion in cold water for about 4 mins., aided by debilitating effects of drunkenness—threw herself into lock of West India Docks, in temporary insanity (post mort.) .....	18 hours
In London Hospital, labourer, 28, lock-jaw following laceration of little finger, accidentally caused by rolling of a hog'shead of sugar .....	*	M. 10, injuries of the abdomen—fell while getting out of a cart, and thereby frightened the horse—was run over by the wheel .....	12 hours	Suffocation:—	
In London Hospital, labourer, 50, contused abdomen, accidentally caused by a truck handle, in drawing a truck up hill .....	6 days	Daughter of an upholsterer, 3, killed by the off-wheel of a cart passing over her head ..	instant	M. 6 wks., convulsions—accidentally overlaid in bed by the side of the mother .....	instant
In London Hospital, biscuit baker, 60, contused and lacerated hand—accidentally drawn in between two rollers of a biscuit-making machine .....	5 days	M. 32, concussion of the brain .....	3 days	F. 1 min., the encircling of the neck at the birth with the navel string.	
In London Hospital, labourer, 62, softening of the spinal cord, caused by a hag of hair accidentally falling on him in a factory ..	10 weeks	Wounds:—		Burns:—	
In London Hospital, F. servant, 22, accidental injury to labium, from coming in contact with a broken chair; and loss of blood from an abscess in the thigh, which ensued ..	10 days	Wife of a brass-finisher, 58, hæmorrhage from a vein in the leg, which she had cut open with scissors—suicide in unsound mind ..	*	In London Hospital, daughter of a labourer, 8, burns on face, neck, chest, and arms, from her clothes accidentally taking fire while standing on a fender .....	5 months
In Guy's Hospital, fellowship porter, 54, injury to his spine by a sack of corn falling on him, as he was unloading a vessel at Rotherhithe, in consequence of the gear being defective ..	1 day	Storehouse clerk, 46, cut his throat in a temporary state of insanity .....	*	Poison:—	
In University College Hospital, labourer, 66, injuries of the lungs from being run over by a waggon at night, at King's Cross, New Road, while trying to draw another man away from the wheels .....	20 hours	Drowning and Immersion:—		In London Hospital, son of a shoemaker, 3, specific operation of atropa belladonna berries on the nervous system (manslaughter against John Hillard) .....	17 hours
In University College Hospital, gasfitter, 57, extravasation of blood on the brain, from being thrown out of a chaise accidentally upset .....	2 days	Son of a labourer, 13, drowning.		In London Hospital, beershop keeper, 34, specific operation of atropa belladonna berries on the nervous system (manslaughter against John Hillard) .....	20 hours
		Son of a pork butcher, 19, drowning.		M. 78, { paralysis .....	2 years
		(The above two Returns are obviously imperfect.)		poisoned by laudanum, taken by mistake (no inquest) .....	12 hours
		Canal boatman's boy, 9, drowned—probably when bathing out of his depth—unable to swim.			
		Engineer, 30, accidentally drowned when bathing—was overfatigued while swimming out of his depth.			
		F. (age unknown), found dead—apparently drowned.			
		First class boy on board H. M. steam vessel, "Sphinx," 18, accidentally drowned whilst bathing in the River Thames off Woolwich.			

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 7, morbus coxarius—natural .....	*	M. 49, natural—found in-cusible—presenting symptoms of apoplexy—died in .....	4 hours	In Lloyd's Row, St. John Street Road, formerly a town traveller, 68, English cholera .....	15 hours
M. 31, disease of the heart—had been an habitual drunkard for half of his life .....	*	M. 65, natural—apoplexy .....	1 hour	F. 8, natural death from effusion on the brain ..	7 hours
M. 74, natural—rupture of the heart, and effusion of blood into the pericardium—chronic inflammation of the heart .....	*	M. 35, natural—sat down intoxicated on a bench—was before in good health—found dead in .....	23 hours	M. 61, natural death—apoplexy .....	instant
In University College Hospital, { exhaustion from diarrhoea ..	2 days	F. 62, natural—apoplexy (not the first attack) ..	3 hours	F. 6 mon., natural death— inflammation of the lungs .....	*
F. 5 mon., { tubercles found in the lungs (p.m.)		F. 40, rupture of the womb, produced by natural causes .....	*	M. 30, natural death from inflammation of the brain .....	*
In University College Hospital, { natural—epilepsy .....	8 hours	F. 63, natural—not under medical treatment—affected with asthma ..	*	M. 31, diseased hip joint .....	9 months
F. 32, { no disease discoverable in any part of the body (p.m.)		F. 64, natural—anasarca .....	34 months	M. 23, inflammation of the bowels .....	2 months
F. 40, effusion of blood into the abdomen, from rupture of a large aneurism of the aorta ..	*	In Chapel Row, district of Amwell, Clerkenwell, widow, 86 (very infirm), cholera after excessive eating (no medical treatment) ..	23 hours	M. 19, consumption .....	2 months
F. 10 mon., natural from diarrhoea .....	1 month			M. 19, consumption .....	2 months
M. 55, natural causes—most probably apoplexy ..	*			M. 56, scrofula of the bowels and peritoneum .....	*
				M. 30, paralysis and consumption .....	*

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. 56, natural—dropped and died .....	instantly	F. 84, found dead in bed, without marks of violence .....	*	M. 54, natural causes .....	*

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's II.:		Fever II. (continued):		St. Thomas' II. (continued):	
	duration		duration		duration
M. 50, mercurial cachexia	2½ years	F. 27, fever in hospital 40 days	*	M. 40, admitted on account of diseased testicle, &c., but had also extensive disease of the lungs, of which he died	*
M. 9, {secondary deposits in lungs (p.m.), cystic abscess of the brain, with disease of the temporal bone (p.m.) abt. 2 yrs.		Small Pox II.:—No deaths registered.		Guy's II.:	
M. 22, phthisis pulmonalis	*	King's College II.:		M. 8, abscess of the hip joint	*
M. 37, disease of the lungs	*	M. 40, cirrhosis—dropsy	*	M. 62, dropsy	*
F. 39, {phthisis pulmonalis ulceration of the bowels	*	Bartholomew's II.:		M. 32, phthisis	*
F. 30, {serofulous ulceration of the mucous membrane of vagina (post mort.).	*	M. 40, delirium tremens	*	M. 37, hypertrophy—hydrothorax—pulmonary apoplexy	*
Westminster II.:—No deaths registered.		M. 22, two abscesses in the cerebellum on the right side	ill some months	M. 54, strangulated hernia	*
Charing Cross II.:—No deaths registered.		F. 19, {ovarian tumour peritonitis	6 days	M. 70, strangulated hernia—operation	*
Middlesex II.:		F. 16, disease of the heart	*	M. 20, fever	*
M. 23, hypertrophy of the heart	*	F. 40, phthisis	*	M. 33, phthisis	*
M. 3, croup	7 days	F. 52, strangulated umbilical hernia—operation —mortification of the intestine	*	F. 47, phlegmonous erysipelas	*
University College II.:—See Coroners' Returns.		F. 32, general dropsy	*	F. 25, phthisis—pneumonia—tubercles	*
Fever II.:		London II.:—See Coroners' Returns.		Dreadnought II.:	
M. 19, {fever in hospital 6 hrs.—from St. Marylebone.	about 3 weeks	St. Thomas' II.:		M. 39, {aortic regurgitation ossific deposit and dilatation of the first portion of the arch.	7 weeks
M. 30, {fever in hospital 4 days—from St. George's in the East.	28 days	M. 55, chimney sweeps' cancer	many years	M. 41, {phthisis numerous cavities in the right lung. miliary tubercle in left apex. pneumonia of left base (post mort.).	3 months
		M. 42, phthisis	*	M. 29, phthisis (affecting chiefly left lung)	9 months
		M. 60, malignant sarcoma of os humeri	more than a year		

## DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, ETC.

Small Pox:		Diarrhœa (continued):		Diarrhœa (continued):		Cholera (continued):	
	duration		duration		duration		duration
F. 11 mon., variola (not vaccina)	12 days	F. 3 mon., diarrhœa	1 month	F. 10 mon., diarrhœa	6 weeks	In Elder-place (East district of Islington, son of a farrier, 1, cholera	3 weeks
M. 9, small pox (not stated whe- ther vaccinated)	5 days	F. 65, chronic diarrhœa	*	F. 50, {diarrhœa fever	8 days	In Ironmonger-row, City-road, watch-maker, 46 (bilious for many years), cholera biliosa, 3 days	
F. 8 mon., {variola vaccinated on the day before small p. appeared	9 days	M. 1, diarrhœa	14 days	M. 3 mon., diarrhœa and con- vulsions	2 days	In Union-street, district of Bo- rough-road, M. 51, (lately em- ployed in the Ordnance), cholera	7 days
F. 10 mon., {dentiition with variola, 2 wks. pneumonia (not vac- cinated)	1 week	F. 49, diarrhœa	*	M. 32, diarrhœa	24 hours	At Union-buildings, Woolwich, cordwainer, 52, eug. cholera, 11 days	
M. 6, {small pox—debility vaccinated two years ago with little effect—vac- cinated again shortly before the eruption.	*	F. 1, {diarrhœa anasarca	1 week	F. 1, {diarrhœa ulceration of intestines	2 weeks	In West-st., Globe-fields, Step- ney, daughter of a slop- cutter, 6 months, cholera, 3 weeks	
F. 3 mon., small-pox, natural (no medical attendant)	*	F. 56, {diarrhœa congestive bronchitis	6 days	M. 53, {phthisis diarrhœa	many months	At Greenwich Hospital, pen- sioner, 76, English cholera, 22 days	
Diarrhœa:		M. 1, {diarrhœa anasarca	2 months	Other cases of diarrhœa not assigned to this head in abstract:—		See Coroners' Returns.	
F. 5 weeks, diarrhœa	7 days	F. 2, diarrhœa	5 weeks	M. 1, {mesenteric disease	*	Syphilis:—	
M. under 1, diarrhœa—exhaustion, 9 days		F. 1, diarrhœa	4 weeks	M. 53, {phthisis diarrhœa	2 months	M. 2 mon., syphilitic	from birth
M. 4 mon., {convulsions diarrhœa	11 hours	F. 10 mon., diarrhœa	6 weeks	F. 1, {mesenteric disease	*	Malformation:—	
F. 70, diarrhœa	3 weeks	F. 5 mon., diarrhœa	3 weeks	M. 6 mon., {diarrhœa tabes mesenterica— diarrhœa	3 months	M. 1 mon., spina bifida	
M. 6 weeks, diarrhœa	6 days	M. 68, {chronic diarrhœa tumor in pelvis (p.m.)	*	M. 46, tuberculous cachexia— diarrhœa	5 days	M. 35, malformation of the skull internally, producing irrita- ting spicula—mania, with effusion on the brain and congestion of the lungs (p.m.)	14 days
M. 2, diarrhœa	3 weeks	F. 24, {diarrhœa exhaustion	10 days	M. 1, mesenteric disease and diarrhœa	3 months	F. 7 wks., spina bifida	
F. 2, diarrhœa	12 days	M. 1, {diarrhœa convulsions	10 days	F. 1, hydrocephalus—diarrhœa	3 days	F. 24 hrs., malformation of the face.	
M. 1, {convulsion fit from teething diarrhœa	some weeks	M. 6 mon., diarrhœa	2 weeks	M. 1, {pneumonia diarrhœa	3 days	F. 6 hrs., spina bifida	
F. 5 mon., diarrhœa	*	F. 64, diarrhœa	3 weeks	M. 71, chronic diarrhœa from disease of the large intestines, 1½ year		F. 67, {rupture obstruction of the bowels	4 years
M. 6 mon., diarrhœa	1 month	F. 1, diarrhœa	1 month	F. 19, {phthisis diarrhœa	16 weeks	F. 65, {unabridged hernia of long standing strangulated	
F. 10 weeks, diarrhœa	about 2 days	M. 7, {diarrhœa convulsions	2 hours	M. 81, {diarrhœa discased brain	3 weeks	See Hospital Returns.	
F. 1 diarrhœa—marasmus	6 weeks	M. 1, {diarrhœa convulsions	6 weeks	F. 1, {enteritis diarrhœa	3 months	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
M. 9 mon., dentiition—diarrhœa	*	M. 1, {diarrhœa convulsions	3 days	M. 34, phthisis—diarrhœa	4 months	F. 28, puerperal mania—exhaus- tion	7 days
M. 1, diarrhœa	14 days	M. 1, {diarrhœa hydrocephalus	2 weeks	M. 78, {brouchitis gangræna senilis	8 years	F. 28, collapse after confinement	*
F. 2, teething and diarrhœa	5 weeks	M. 77, diarrhœa—debility	14 days	M. 3, {diarrhœa phthisis in abstract	14 days	F. 27, {premature confinement exhaustion	9 days
M. 1, diarrhœa	5 months	M. 1, diarrhœa	*	M. 3, {chronic hydrocephalus, from birth dysentery, 6 weeks (as- signed to hydrac- phalus in abstract).	3 weeks	F. 29, {difficult parturition supposed rupture of the womb.	*
F. 12 weeks, diarrhœa	14 days	M. 8 mon., diarrhœa	3 weeks	Dysentery:—		F. 31, {cachectic congestion of lungs peritonitis	4 days
M. 10 weeks, {diarrhœa thrush	5 weeks	M. 4 mon., diarrhœa	9 days	M. 62, dysentery	3 weeks	M. 29, delirium tremens	5 days
F. 5 mon., {congestion of the brain	1 week	M. 2, diarrhœa— inflammation	9 days	M. 9 mon., {dysentery inflammation of the chest	3 days	M. 47, delirium tremens	3 weeks
F. 7 weeks, diarrhœa	1 month	F. 9 mon., diarrhœa	8 weeks	F. 8, {diarrhœa—dysentery and low fever	6 days	M. 54, {delirium tremens brouchitis	3 months
M. 1, diarrhœa	2 weeks	F. 50, diarrhœa	6 weeks	F. 1, dysentery, dropsy, and hy- drocephalus	14 days	See Bartholomew's Hospital.	
M. 6 weeks, diarrhœa	3 weeks	M. 7 weeks, diarrhœa	*	F. 56, {chronic brouchitis dysentery	6 months	Intemperance:—	
F. 1, diarrhœa	3 weeks	F. 85, diarrhœa	5 weeks	F. 3 mon., dysentery	5 days	See Coroners' Returns.	
M. 9 weeks, {marasmus diarrhœa	2 months	M. 63, diarrhœa—ascites	*	F. 1, {fever dysentery	12 days	Purification:—	
M. 1, diarrhœa	1 week	F. 1 mon., {diarrhœa inflammation of tousils	5 days	M. 39, {bæmoptysis diarrhœa (assigned to phthisis in abstract)	4 days	F. 30, consumptive diathesis— pleuritis from cold and hard labour	*
M. 1, {teething bowel complaint	6 months	M. 7 mon., diarrhœa	2 days	M. 3, {chronic hydrocephalus, from birth dysentery, 6 weeks (as- signed to hydrac- phalus in abstract).	3 weeks	NOTE.—The mother of a girl, who died at the age of 6 weeks, from marasmus, was only 14 years and 2 months when her child was born.	
M. 8 mon., diarrhœa	5 weeks	F. 4, diarrhœa	10 days	Cholera:—			
M. 6 mon., diarrhœa	3 weeks	F. 8 mon., diarrhœa	7 days	In Church-place, Harrow-road, Paddington, daughter of a carpenter and joiner, 7 mon., cholera	1½ day		
F. 1, teething—diarrhœa	*	M. 14 days, {diarrhœa gastro-enteritis	6 days	In Upper Church-street, Chelsea, grocer's assistant, 16, epi- demic cholera	7 days		
F. 1, {diarrhœa psoriasis general over the body	2 months	M. 1, diarrhœa	7 days	In Hastings-street, (district of Gray's-inn-lane), daughter of a professor of music, 5 mon., English cholera	2 weeks		
F. 5 months, dentiition—diarrhœa, 20 days		F. 60, {diarrhœa peritonitis	36 hours				
F. 6 mon., {diarrhœa low vitality	2 months	M. 32, nervous exhaustion and diarrhœa	several months				
F. 46, chronic diarrhœa	*	M. 1, diarrhœa	3 weeks				
F. 1, diarrhœa	*	F. 6 mon., diarrhœa (serons)	10 days				
F. 1, {vomiting and purging colic	6 days	F. 55, diarrhœa	21 days				
F. 1, {viscera healthy (post mort.)	*	M. 73, diarrhœa	3 days				
M. 4 mon., diarrhœa	*	F. 72, diarrhœa	7 days				
F. 68, diarrhœa	*	F. 59, {congestion of the liver, 1 year diarrhœa	4 weeks				
M. 3 mon., diarrhœa	10 days	F. 7, diarrhœa	6 weeks				
F. 1, diarrhœa	*	F. 46, diarrhœa	10 days				
F. 32, diarrhœa	3 weeks	F. 4 weeks, diarrhœa with aphtha	9 days				
F. 8 months, diarrhœa	10 days	M. 3 months, diarrhœa	14 days				
F. 54, peritonitis—diarrhœa	2 weeks	M. 11 months, diarrhœa	*				

## RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

	duration		duration		duration
F. 53, {fever inflammation of the internal saphenous veins of both sides.	7 days	F. 34, scirrhus abscess in the left lung	*	F. 60, cancer—scirrhus of uterus and right ovary	*
M. 71, phthisis pulmonalis	*	M. 12, {pericarditis hypertrophy of the heart—general dropsy	2 years	M. 7 wks., gastritis, with ulceration of mucous tissues	*
F. 18, congestion and serous effusion into the ventricles of the brain	*	M. 38, {ossification of femoral artery mortification	1 year	M. 5, tubercular peritonitis, and tubercles in liver	*
M. 9 mon., pneumonia	7 days	M. 9, {hydrocephalus acutus effusion into cerebral cavities.	12 hours	F. 68, fungoid tumour, arising from trochanter minor of femur	7 months
M. 6, {fever—serous effusion into the ventricles and abdomen	10 days	F. 16, {disease of the heart disease of the kidneys	14 days	F. 43, pulpy and dropsical tumours on the uterus and ovaries, with pulpy tubercles in the liver; and dropsy of the abdomen	6 months
M. 6, convulsions	24 hours		8 months		

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, 12th September, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit)	Readings of Thermometers								Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning	
			Dry			Dew Point Mean from 12 Rts	In the sun, as shown by a self-register- ing Thermometer	In the shade, as shown by a self-register- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning	Mean of 12 Diff.	Greatest	Least	General Direction		Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	The electricity was very active between 11h. 45m. p.m. and 3h. 17m. p.m. The changes from positive to negative were frequent. Sparks abundant. Nothing was shown at any other times.	During thunder and lightning. See General Remarks.	About one-half of the sky was covered with cirrostratus, cumuli, and fleecy clouds at 9h. a.m. At 4h. 40m. p.m. dark cumulostrati suddenly came up from the N.E., and covered the sky at 5h. 30m. p.m. Thunder was frequently heard between these times, and flashes of lightning were occasionally seen. Rain was falling heavily at some parts of Greenwich, but none fell at the Observatory; indeed, it appears that the rain fell in many different places, whilst in intermediate places none fell. During the afternoon about three-fourths of the sky were covered with cirrostrati, a few cirri, and scud.
MON.	Nothing was shown till 7h. a.m., when it was positive and very weak. From 9h. a.m. till noon it was positive and active. At other times positive and tension moderate.	See General Remarks.	The sky was nearly free from cloud till 7h. a.m.; from that time till noon one-third was covered with cirrostrati, cirri, and fleecy clouds. A fog prevailed during the morning. Before 7h. p.m. the sky became overcast, with cirrostrati, cumulostrati, and fleecy clouds. Between 2h. and 3h. p.m. thunder was frequently heard, and flashes of lightning seen, but the electrical instruments were not affected. Between 5h. and 8h. p.m. the amount of cloud was small, consisting chiefly of cumuli, cirrocumuli, cirrostrati, and scud. Shortly after 8h. p.m. the sky became overcast, and remained so till midnight. Flashes of lightning were occasionally seen during the evening.
TUES.	No electricity was shown throughout the day.	See General Remarks.	The sky was generally overcast with cirrostratus till 9h. a.m. At 11h. a.m. the clouds were extensively broken, but at 6h. 30m. p.m. it was again overcast, and remained so till 6h. p.m. After that time it became cloudless, and continued so till midnight.
WED.	At 9h. a.m. it was positive with moderate tension. At other times during the day nothing was shown.	See General Remarks.	The sky remained cloudless till 3h. a.m., when a thin cirrostratus suddenly covered the sky. It continued overcast till 2h. a.m. A dense fog prevailed between these times. Between 7h. a.m. and noon only a small portion of the sky was covered. During the remainder of the day nine-tenths of the sky were covered with cirrostratus. Flashes of lightning were seen between 7h. and 9h. p.m.
THURS.	At 2h. p.m. the electricity was positive, but very weak. Nothing was shown at any other times.	See General Remarks.	Generally overcast throughout the day with cirrostratus, fleecy clouds, and scud. From 4h. to 6h. p.m. about one-half of the sky was covered with cloud.
FRID.	Nothing was shown throughout the day.	See General Remarks.	Cirrostratus and scud generally covered the sky till 2h. p.m. The clouds were extensively broken about 3h. p.m., and from 3h. p.m. to midnight it was cloudless.
SAT.	Slightly positive from 3h. to 5h. 30m. p.m. Nothing was shown at any other times.	See General Remarks.	The sky was nearly cloudless about 8h. a.m., and 5h. p.m. At other times during the day it was generally covered with cirrostratus and scud. The magnets have been very much disturbed during the greater part of this week.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 59.9; and the mean reading at 7h. 30m. P.M., was 65.9; the mean readings at the Royal Observatory for the same times were 58.2 and 63.1 respectively.

† The mean direction of the wind for the first four days was S.W., and for the remainder of the week N.N.E.

A TABLE OF  
**Births and Deaths registered in the Metropolis,**  
*During the Week ending Saturday, September 19th, 1846.*

ANNUAL SERIES VII.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. [No. 38.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 37,

(The tabular abstract on the first page is for the week ending Saturday, Sept. 19th. The following selection of cases is made from the returns for the week ending Sept. 12th.)

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
M. 43, fracture of the skull, and laceration of the brain from being accidentally pushed down by a man carrying potatoes (in Bow Street— <i>post mort.</i> )	6 hours	F. 87, shock to the nervous system from being run over by a cart while crossing Beech St. 24 hours		M. 25, accidentally drowned in the River Thames, by the upsetting of a four-oared boat in a regatta. . . . . immersed between 4 and 5 days	
M. 47, extravasation of blood on the brain, caused by an accidental fall from a loft. . . . .	*	In Guy's Hospital, gentleman, 70, delirium tremens, caused by a fracture of the right leg, from being accidentally run over by a cab at Newington Causeway . . . . .	11 days	M. 20, accidentally drowned in Regent's Canal basin, by falling out of a lighter immersed about 10 ms.	
F. 6 mon., whether from natural disease, or an accidental fall in the street a week previously, unknown.	*	F. 9 days, injuries of the head—how caused unknown . . . . .	instant	F. 46, drowned herself in the River Lea, near Three Mills—temporary insanity. . . . .	8 mins.
F. 75, injuries to the head caused by an accidental fall down a flight of stairs . . . . .	*	Wounds:—		M. about 55, found drowned in the River Thames—no proof by what means he came into the water—no marks of violence under water 5 hrs.	
F. 9, fracture of the skull by an accidental fall from a first floor window ( <i>post mort.</i> ) about 3 weeks		M. about 54, suicide with a razor by cutting his throat (insane at the time) . . . . .	*	M. about 65, drowning—not known how he got into the water.	
In St. Thomas's Hospital, bricklayer's labourer, 29, fracture of the pelvis, right leg, and two ribs on the right side, by an accidental fall from a scaffold at the Tower of London ( <i>post mort.</i> )	10 days	M. 62, stabbed himself with a knife in the right side (being at the time of unsound mind) 4 days		M. about 30, drowned—not known how he came into the water.	
M. from 50 to 55, injuries of the contents of the abdomen, by a fall from a haystack, by overbalancing himself . . . . .	18 hours	In Guy's Hospital, labourer, 38, fell against a scythe and cut his arm . . . . .	8 weeks	M. 14, drowned while bathing out of his depth.	
M. 19, falling in the street accidentally. . . . .	6 weeks	Barnard, 16, destroyed herself by cutting her throat with a razor, being at the time of unsound mind . . . . .	*	M. 61, suicide by drowning—state of mind at the time not known.	
Wife of a schoolmaster, 64, disease of the spine following an injury ( <i>no inquest</i> )	17 months	Single woman, 28, suicide by cutting her throat (being of unsound mind). . . . .	*	F. about 55, suicide by drowning—insane.	
M. 8, head crushed by a piece of timber accidentally falling . . . . .	*	Drowning:—		Hanging and Suffocation:—	
M. 40, injuries of the spine by the upsetting of a street cab, which he drove against a bank	instant	Apprentice to a waterman, 18, drowned whilst pushing off a waterman's boat, in order to carry a fare, at Battle Bridge Stairs under water about 10 minutes		F. 33, hanged herself—insane.	
Carman, 27, compression of the skull—accidentally run over by the wheel of a four-wheeled truck, heavily laden, while attempting to get on the shaft, being in liquor. . . . .	instant	Journeyman smith, 64, found drowned (in the River Thames)—but how he came into the water no sufficient evidence.		Son of a basket-maker, 9 wks., suffocation from taking an over-quantity of the mother's milk, who had fallen asleep while the child was suckling.	
M. 34, fracture quite across the base of the skull, with large effusion of blood there, from being accidentally thrown out of a gig at Reading . . . . .	5 days	Shoe-clecker, 53, found drowned (in the River Thames)—but how he came into the water no sufficient evidence.		Son of a hearth rug weaver, 3 wks., suffocation from being accidentally overlaid in bed . . . . .	instant
M. 60, accidental from fracture of the ribs and rupture of the spleen, having been run over by a clarence in Thames Street . . . . .	5 days	Labourer, 24, drowned accidentally when bathing in the River Thames . . . . .	under water 3 days	M. 1, suffocated in night-soil, into which he had fallen, probably while looking in at play—taken out dead in . . . . .	1 of an hour
M. 34, delirium tremens; brought on by an injury to the right leg, from being accidentally thrown from a gig ( <i>post mort.</i> )	6 days	Son of a draper, 8, drowned by falling into the River Thames accidentally. . . . .	under water 2 1/2 hours	Burns:—	
M. 45, rupture of the bladder and fracture of the pelvis, from the wheel of a loaded waggon accidentally passing over him . . . . .	24 hours	Daughter of a shopman, 3, drowning by the swamping of a siff from going against the paddle box of a steamboat . . . . .	under water 40 hours	M. 30, pleurisy, brought on by being burnt, from the accidental blowing up of a still used in rectifying turpentine ( <i>post mort.</i> )	16 days
F. about 70, fractured ribs, and rupture of the lungs from a cart wheel, as she was crossing Goswell Road ( <i>post mort.</i> )	about 1 hour	Widow of a leather dresser, 67, congestion of the brain, consequent upon inflammation of the lungs, produced by submersion for nearly one minute in the Regent's Canal—(suicide—not proved insane) . . . . .	5 days	F. 7, accidentally burnt by her clothes taking fire, while lighting a fire . . . . .	5 days
M. 31, fracture of the skull and rupture of the brain, caused by falling from a horse in a pit, at Whetstone 4 <i>post mort.</i>	7 days	M. 15, drowned accidentally, going into the River Thames to bathe . . . . .	under water 45 mins.	In St. Thomas's Hospital, son of a hackney-coachman, 2, accidentally burnt by his clothes taking fire (at Kennington). . . . .	about 4 hours

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 63, natural—destitute—brought in from the street insensible, and died next day.		M. 47, not known—had suffered numerous fits for . . . . .	12 months	M. 7, natural death in a fit from adhesion of lungs to the heart ( <i>post mort.</i> )	about 3 years
F. 20, natural peritonitis . . . . .	several days	F. 28, { natural—had been delivered of a living child . . . . .	14 days previously	M. 51, natural death from apoplexy . . . . .	20 minutes
F. 52, natural—under treatment for sore throat . . . . .	*	ill . . . . .	45 minutes	M. 4, natural death from the rupture of a bloodvessel . . . . .	suddenly
M. 40, inflammation of the larynx ( <i>p.m.</i> ) . . . . .	4 days	M. 41, found dead, having died suddenly from anasarca . . . . .	*	M. 57, natural—suddenly from disease of the heart . . . . .	*
M. 57, erysipelas of the left leg and thigh . . . . .	4 days	M. 49, natural—sudden from disease of the heart . . . . .	*	F. 77, natural death from apoplexy . . . . .	2 days
In St. Thomas's Hospital, M. 62, apoplexy ( <i>p.m.</i> )	12 hours	M. 47, natural death—diseased heart . . . . .	*	F. lived only a few moments, died from sudden delivery, and want of proper assistance at the birth.	*
M. 11 months, natural death by a fit from teething . . . . .	*	M. 8 mon., natural death—sudden from croup . . . . .	*	M. 80, natural from apoplexy . . . . .	about 1 hour
F. 46, natural death—apoplectic fit . . . . .	15 hours	M. 12 weeks, natural death in a fit of convulsions . . . . .	about 5 min.	M. 72, natural—suddenly, from disease of the lungs . . . . .	of long standing
F. 50, natural death from serous apoplexy . . . . .	3 years ago	F. 77, natural death from apoplexy . . . . .	about 2 hours	F. 1, natural—suddenly, in a fit . . . . .	sudden
P. 66, { followed by dropsy which has continued ever since—natural and instantaneous death—not under medical treatment.		F. 49, natural death from apoplexy . . . . .	sudden	M. 43, natural death from affection of the heart . . . . .	sudden
F. 52, natural—apoplexy . . . . .	45 minutes	F. 44, natural from apoplexy . . . . .	about 1 hour	M. 37, natural death in a fit . . . . .	*
F. 4 weeks, ramollissement of the brain ( <i>p.m.</i> )		M. 73, rupture of a vessel of the heart by over stimulation from excessive drinking of ardent spirits . . . . .	instant	F. 6 months natural death from convulsion fit . . . . .	*
M. 29, natural—immediately after completing a journey from Liverpool on the railway—the subject of phthisis . . . . .	for several months	M. 66, natural death from supposed disease of the heart . . . . .	sudden	F. 39, natural death—apoplexy resulting from intoxication . . . . .	*
F. 26, rupture of a bloodvessel in the chest—(subject also to hydrothorax). . . . .	nearly instant	M. 38, natural death from rupture of a bloodvessel . . . . .	about 20 minutes	M. 47, natural death—apoplexy . . . . .	*
F. about 55, rupture of bloodvessels of, and hemorrhage from, the lungs—(old pulmonary disease). . . . .	lived 1 minute	M. 10 mon., natural death from inflammation of the lungs . . . . .	*	F. 52, natural death—suddenly, from disease of the heart . . . . .	*

**CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.**

F. 77, natural—seen alive and apparently well half an hour before.	duration	M. 10, natural death—precise cause unknown	duration	M. 4 months, natural causes	duration
F. 71, natural death—decay and debility from age	*	M. 1 month, natural by the visitation of God, nature of disease not ascertained—(no medical attendant)	3 1/2 days	M. 63, natural death while in a state of debility (supposed to have been dead 3 hours when found)	*

**THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.**

**NOTE.**—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

M. 1, gastro-enteritis ..... 1 month F. 5, inflammation of the brain and effusion ..... 10 days
--	--	---

In the district of South Chelsea, a child, aged 5 weeks, died on 31st May, 1846, of "pneumonia from bad air." The gentleman who gave a medical certificate of the cause of death, added the following note:—

"I think it is important to direct attention to the unwholesome residence of the family whose infant is reported above. This family occupy one of the lofts over a number of horses, in Mr. Chancellor's yard, White Lion-street. The twin-brother of the above child is dying at this moment from the same cause; a third child of the same family lies also very ill, and I know not to what else to attribute it. In another loft upon the same premises, a very young infant died a few days ago, apparently under the same circumstances. Within a month another infant died, and but lately came there to reside. I learn further, that for a great number of years not one child has survived 2 years, though very many have been born there. One family lost 5, another lost 5 or 6, and so on."

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at any examination during the day.	See General Remarks.	Cirrostratus, fleecy clouds, and scud covered the sky until 1h. p.m. From 1h. 20m. p.m. to 5h. 30m. 1 m. the sky was nearly cloudless, but soon after that time clouds came up and covered the sky during the rest of the day.
MON.	Nothing was shewn throughout the day.	See General Remarks.	The sky was overcast with cirrostratus and scud till 2h. p.m., when extensive breaks occurred in every direction. From 3h. p.m. to 7h. 45m. p.m. the amount of cloud was very variable, but consisting of cumulostrati, cumuli, and cirrostrati. At 7h. 50m. p.m. the sky became cloudless, and continued so till midnight.
TUES.	Nothing was shewn during the day, except from 9h. a.m. till noon, and at 3h. p.m., when it was positive, but very weak.	See General Remarks.	Cloudless till 1h. 10m. a.m.: soon after this time dark scud suddenly appeared, and soon covered the sky. It remained overcast till 5h. a.m. From that time till 3h. p.m. the sky was one-half covered with cirrostrati, fleecy clouds, and haze. During the remainder of the day the sky was nearly cloudless.
WED.	At 11h. a.m. the electricity was slightly positive, but nothing was shewn at any other time during the day.	See General Remarks.	Cloudless till 3h. a.m. From 5h. a.m. to 3h. p.m. cirrostrati, fleecy clouds, and haze covered about three-quarters of the sky. During the rest of the day it was nearly cloudless.
THURS.	Nothing was shewn during the day, except from 2h. to 9h. p.m., when it was positive and tension moderate.	See General Remarks.	The sky remained cloudless till 5h. a.m.: after this time cirri, cirrocumuli, and cirrostrati covered a large portion of it till 2h. p.m., when it became nearly overcast. At 6h. 15m. the clouds suddenly cleared off, and the sky was nearly cloudless till 5h. 30m. p.m. After this time it became overcast, and continued so till midnight. Flashes of lightning were seen between 8h. 30m. and 9h. p.m.
FRID.	Nothing was shewn till 5h. p.m., when it was positive with moderate tension. It remained so till 10h. p.m.: at 11h. p.m. it was positive but very weak.	See General Remarks.	The sky became cloudless about 6h. a.m., and remained so till 4h. a.m. Several meteors were seen between these times. Cirri, cirrocumuli, and cirrostrati were extensively distributed from 5h. to 9h. a.m. It was overcast from 9h. a.m. to 2h. p.m. During the remainder of the day it was nearly cloudless.
SAT.	Nothing was shewn throughout the day, except at 9h. a.m., when it was slightly positive.	See General Remarks.	Cloudless till 6h. a.m.: soon after this time it became overcast, and remained generally so till 2h. p.m.; variable from this time till 6h. p.m., and cloudless during the rest of the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 54.8; and the mean reading at 7h. 30m. P.M., was 63.4; the mean readings at the Royal Observatory for the same times were 52.3 and 60.6 respectively.

† The direction of the wind for the week has been very variable.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, September 26th, 1846.*

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 39.]

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 38,  
(The tabular abstract on the first page is for the week ending Saturday, Sept. 26th. The following selection of cases is made from the returns for the week ending Sept. 19th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

CORONERS' RETURNS OF DEATHS BY VIOLENCE.  
NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
M. about 35, inflammation of the arm and side, the result of a slight injury in a fall	*	In Guy's Hospital, daughter of a carpenter, 2, injuries to the abdomen by a horse which had run away treading on her, in Regent Street, Lambeth	5 hours	M. about 20, found dead in the River Thames.	
M. 32, concussion by a fall down a ladder staircase accidentally	12 days	F. 76, fracture of her skull by the wheel of an omnibus in the Old Kent Road	a few minutes	M. 16, accidentally drowned in the River Thames by falling out of a Peter-boat under water 4 d.	
M. 58, contusion and other injuries—fell from a ladder when at work, and died	instantly	Daughter of a firework maker, 3, fracture of the head from the near wheel of a brewer's dray passing over it	instantly	M. 24, drowned in the River Thames—no evidence how.	
Bricklayer, 64, accidental death by a fall from a ladder	14 days	In Guy's Hospital, guard on the Dover Railway, 30, loss of blood and shock to the system, caused by severe wounds and fractures of his legs, by slipping off a railway carriage on the Dover line, at Reigate	9 hours	M. 51, drowned in the River Thames—no evidence how.	
Labourer about 50, accidental death from the fall of the deck of a vessel, by a beam breaking (in the West India Dock)	sudden	F. 5 days, congestion from pressure in the birth—convulsions (no inquest)	*	M. about 12, found dead in the River Thames	
M. convict, 32, fractured skull, with laceration of the brain, and extravasation of blood, from an accidental fall down the hold of Her Majesty's Steam Ship "Sidon," in the River Thames (post mort.)	20 hours	Wounds:—		M. 35, accidentally drowned in the River Thames	
In Guy's Hospital, corn porter, 27, fracture of his spine by several sacks of barley falling on him at Dockhead (post mort.)	2 months	M. 37, cut his throat with a razor, when insane (found dead).		M. 22, accidentally drowned in the River Thames, by the upsetting of a boat.	
In Westminster Hospital, labourer, 28, fracture of the skull from a box used for hoisting bricks, falling on its descent from the top of the Houses of Parliament, when deceased was below, waiting to receive it	2 hours	Greengrocer about 42, suicide by cutting his throat with a razor, when in a state of insanity (found dead in his room)	*	F. 12, accidentally drowned in the River Thames, by falling out of a boat under water 1 hour	
In Guy's Hospital, son of a seaman, 16, injury to his brain by some slates falling on him, in the hold of the "Edward," of Lynn, at Cotton's Wharf, Southwark	30 hours	F. 28, wound in the throat made by a razor—insanity—delirium tremens	*	M. 16, suddenly and accidentally drowned by falling into the dock from the quay	*
In Guy's Hospital, son of a labourer, 9, rupture of the lungs by a cart wheel passing over him, whilst crossing Park Road, Peckham	14 days	M. 47, cut his throat with a razor, in a temporary state of insanity	*	M. about 25, found dead in the River Thames at Woolwich—name unknown—no evidence.	
		F. 40, cut her throat in a temporary state of insanity	*	Hanging and Suffocation:—	
		Drowning:—		M. 43, suicide by hanging—at the time labouring under temporary derangement.	
		Son of a journeyman tanner, 12, found drowned—but how he came into the water no sufficient evidence.		M. 4 mon., suffocation—no evidence how caused—found dead in bed.	
				F. 2 mon., suffocated by being shut up (in ignorance) in a turn-up bedstead.	
				Poison:—	
				M. between 3 and 4, poisoned by arsenic—wilful murder against some person or persons unknown.	
				F. 31, suicide by poison—2 drachms of essential oil of bitter almonds (temporary derangement)	30 mins.
				F. 28, suicide by laudanum—in temporary derangement	4 days

CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 47, natural causes, brought on by intoxication	*	M. 34, natural death from the rupture of a blood vessel	3 days	(1) febris remittens	7 days
M. 27, epilepsy (found dead in bed).		M. 55, natural—supposed from rupture of a blood vessel of the heart	sudden	pneumonia	4 days
M. supposed about 50, fainting, produced by inflammation of the intestines—died in a few minutes (post mort.).		M. 61, natural death from disease of the heart	instantly	jaundice	2 days
M. 54, serous apoplexy, with disease of heart—found dead in his bedroom (post mort.).		F. 38, natural death—exhaustion from childbirth	*	albuminuria	at least 6 months
M. 33, natural after intoxication—paralyzed for 6 yrs. an habitual drunkard.		M. 45, natural death—pulmonary apoplexy	4 hour	paralysis	3 weeks
F. 7 mon., natural—not under medical treatment—teething.	*	Convicts on board the "Unité" { M. 64, fever and pneumonia	*	stillicidium urinae	3 weeks
F. 47, natural death, sudden, from diseased wound	*	the "Unité" { M. 57, disease of the kidneys and bladder—and paralysis	*	gangrenous inflammation of fore finger	3 weeks
				irritative fever.	
				(post mort.)—advanced granular degeneration of both kidneys—contracted and thickened bladder—atheromatous deposits abundant in lining membrane of aorta—thickening, opacity, adhesions, and chronic inflammation of membranes of brain.	
		NOTE.—The cases of the above convicts are described more in detail in the following medical certificates:—			

CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 10 wks., natural causes	*	F. a few hrs., unknown.	*	M. 49, natural death, sudden, from congestion of the vessels	*
M. 73, natural causes	sudden	F. about 70, natural causes (found dead in her room.)	*	M. 43, found dead—precise cause not ascertained	*
F. 64, natural causes	sudden				

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H. :—		University College H. (continued) :—		Guy's H. (continued) :—	
	duration		duration		duration
M. 63, { hypertrophy of bones of cranium. paraplegia enlarged prostate gland (post mort.). tabes mesenterica.....	5 weeks	F. 28, enlarged liver and spleen—disease of the heart.....	*	M. 38, enlargement of the heart—pericarditis (post mort.).....	*
M. 3, { enlarged and diseased bronchial glands (post mort.).....	*	F. 21, typhus fever.....	*	M. 30, albuminuria—brouchitis.....	3 months
M. 53, apoplexy (post mort.).....	8 hours	Fever H. :—No deaths registered.		M. 33, pleurisy—pneumothorax.....	*
M. 56, { diseased heart.....	*	Small Pox H. :—		St. Thomas' H. :—

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn during the morning. Positive with tension weak from 3h. p.m. to midnight.	See General Remarks.	The sky was generally cloudless till about 10h. 30m. p.m., when a thin cirrostratus came up and covered the greater portion of it. Several meteors were seen during the evening.
MON.	Slightly positive from midnight to 4h. a.m., and from 4h. p.m. to 10h. p.m. Nothing was shewn at any other times.	See General Remarks.	The sky was generally overcast throughout the day, except from 6h. a.m. to 4h. a.m., between which times about one-half was covered with cirrostratus and scud. The magnets were disturbed during the evening.
TUES.	Slightly positive about noon, and at 4h. p.m.; nothing was shewn at any other times.	See General Remarks.	Cumuli, feecy clouds, cirrostrati and scud generally covered about one-half of the sky throughout the day. The magnets were greatly disturbed; the magnetic declination being at one part of the day more than 1° less than usual, and the disturbances were greater in amount than any since 1842 (July 2nd).
WED.	Negative and very active from 2h. 10m. a.m. to 2h. 25m. a.m., and from 9h. 30m. to 9h. 45m. a.m. It was negative with tension moderate about 1h. 20m. p.m., and 11h. 20m. p.m., but nothing was shewn at any other times.	See General Remarks.	About one-third of the sky was covered with cloud till 1h. a.m.; from that time till 2h. p.m. it was mostly overcast; the sky was then about one-half covered with cirrostratus till 10h. p.m., and overcast again at midnight. Occasional flashes of lightning were seen during the morning. Several very heavy showers of rain fell between 2h. a.m. and 1h. 30m. p.m., and from 10h. p.m. to midnight. The magnets were disturbed during the day.
THURS.	Negative but weak about 3h. a.m., and positive with tension strong at 1h. 20m. p.m., but nothing was shewn at any other times during the day.	See General Remarks.	The sky was generally overcast throughout the day, except from 3h. p.m. to 5h. 30m. p.m., when about one-half was covered with cirrostratus and dark scud; rain was falling very heavily from midnight till 4h. 30m. a.m.
FRID.	Nothing was shewn throughout the day except at 5h. 30m. p.m., when it was negative with moderate tension, and slightly positive from 7h. to 10h. p.m.	See General Remarks.	Throughout the day until 10h. p.m. the amount of cloud was variable, the sky being frequently about one half, and at other times wholly, covered. At 10h. p.m. the sky was nearly cloudless, and remained so till midnight. The prevailing clouds were cumuli, cirrostrati, and scud. At 10h. 25m. a brilliant meteor was seen.
SAT.	Nothing was shewn till 4h. p.m., when it became negative, with moderately strong tension; slightly positive at 6h. p.m.; the instruments were undisturbed afterwards till midnight.	See General Remarks.	The sky was cloudless till 4h. a.m., and overcast from this time till 4h. p.m.; afterwards the amount was variable till 9h. p.m.; overcast nearly till midnight. The prevailing clouds were cumuli, cirrostratus, and scud. A shower of rain fell at 4h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been out of order during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 56°4; and the mean reading at 7h. 30m. P.M., was 60°2; the mean readings at the Royal Observatory for the same times were 56°8 and 58°2 respectively.

† The mean direction of the wind for the week was E. for the first four days, and variable afterwards.

Erratum in the printed report of last week.—In the foot note relative to the reading of the thermometer whose bulb is placed in the full rays of the sun, omit "The readings of the thermometer placed in the full rays of the sun was inadvertently omitted on the 22nd, 23d. a.m."

A TABLE OF  
Births and Deaths registered in the Metropolis,  
During the Week ending Saturday, October 3d, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 40.]

Causes of Death	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.		Causes of Death.	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 39.

The tabular abstract on the first page is for the week ending Saturday, Oct. 3rd. The following selection of cases is made from the returns for the week ending Sept. 26th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Hanging and Suffocation:—	duration
Journeyman box-maker, 31, concussion of the brain, occasioned by his throwing himself from the window of a house into the street, being insane.....	instantly	Domestic servant, 22, having her throat cut with a knife by John Smith (wilful murder) a few mins.		Officer of the army, 39, suicide by hanging whilst in confinement for uttering a forged note—state of mind not known.	
Builder, 56, accidental fall from a wharf upon the shore of the River Thames at Rotherhithe.		Drowning:—		Grocer and general dealer, 45, hanging himself by a handkerchief to a piece of iron at the top of a bedstead, his feet not being off the floor—temporary insanity (had been dead perhaps 2 hours when discovered).	
Son of a painter, 3, injury to the substance of the brain, by falling accidentally in the street 11 days purpura.....	5 days	M. 28, drowned by falling into the Thames, when stepping in the dark from one steamboat to another.....	under water 7 hours	F. domestic servant, 18, suicide by hanging herself in a state of temporary mental derangement.	
F. 25, concussion of the brain.....	1 month	Carpenter about 70, found drowned in the River Thames at Doggate—no evidence how he came into the water—no mark of violence.		Son of a hatter, 9 mon., suffocated by slipping off the pillow of a bed on to his face, having been laid thereon to sleep.	
M. 6, concussion of the brain—how caused unknown.....	*	Mariner, 28, accidentally drowned by a fall from a ship in London Docks.			
Wounds:—		M. supposed 50 (unknown), found drowned in the River Thames—left leg fractured just below the knee—no proof how he came into the water.			
Retired upholsterer, 58, loss of blood from a wound in the throat—suicide—state of mind unknown.....	*	M. supposed 18 (unknown), found drowned in the River Thames—no marks of violence—no proof by what means he came into the water.			

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 71, natural—was affected with paralysis of one side—not under medical treatment ..	*	F. 10 wks., natural—convulsions.....	*	M. 48, serous apoplexy.....	*
M. 75, natural—an affection of the chest—died suddenly.		F. 67, natural—not under medical treatment—suddenly fell while sweeping a shop, and died instantly		M. 69, natural death from apoplexy .....	*
F. 65, natural—a great drunkard—not under medical treatment—previous indications of apoplexy .....	*	F. 40, natural death—congested vessels of the brain .....	sudden	M. 24, natural death by the visitation of God—sudden from delirium and fever.....	*
F. under 1, natural disease—disease of the kidney found .....	*	F. 14, hypertrophy of heart (died instantly) ..	*	M. 23, natural death—rupture of a blood vessel sudden	*
M. 37, dropsical effusion from habitual intoxication .....	during the last 6 months	F. 7, natural—from inflammation of the peritoneum (post mort.) .....	24 hours	M. 81, natural death—congestion of the brain (post mort.) .....	*
M. 64, natural—ossification of the valves of the heart .....	*	M. 1, disease of the heart.....	*	M. 77, natural death from apoplexy .....	instantly
M. 16 days, natural—convulsions .....	10 hours	M. 34, apoplexy .....	4 hours	F. 7 wks., diarrhoea caused by change of food, from being weaned .....	*
		F. 60, supposed from rupture of a blood vessel near the heart .....	*	M. 85, natural death—asthma.....	*
		M. 56, natural death from diseased heart (lived half an hour).....	*	F. 49, congestion of the brain from excessive drinking of spirituous liquors.....	*

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. 46, natural—not under medical treatment ..	*	F. 28, natural—no previous medical attendance sudden		M. 85, natural death—old age—and debility thereon.	
F. 7 days, natural .....	*	M. 79, natural causes.....	sudden	F. 91, natural death—debility of body from age and decay.	
F. 44, natural—became suddenly insensible and convulsed at a public house, on her road home.....	II hours	F. 60, natural causes.....	instantly		
		M. 7 mon., found dead in bed without marks ..	*		

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shewn at any inspection of the instruments during the day.		At 9h. a.m. the amount of cloud was small, consisting of cirri, cumuli, and small quantities of scud passing from the W. Shortly afterwards the sky became covered with cumuli and scud. Rain began to fall at 9h. p.m.
MON.	The electricity was negative and active at 1h. a.m. At 11h. a.m. it was positive and very weak. Nothing was shewn during the rest of the day.	See General Remarks.	Rain continued falling at short intervals till noon, from which time till 6h. p.m. a dense cirrostratus covered the sky. During the remainder of the day the amount of cloud was variable, but generally one-third part of the sky was covered with cirrostratus and scud.
TUES.	At 7h. p.m. the electricity was positive and very weak; at other times during the day nothing was shewn, except at 4h. 4m. p.m., when it was strongly negative.	See General Remarks.	The sky was generally cloudless till 9h. 30m. a.m.; shortly after which time cumuli, cumulostrati, and cirrostrati covered nearly every portion. A slight shower of rain fell at 1h. 15m. p.m. From the latter time till 6h. p.m. one-half of the sky was covered with massive cumuli, cirrostrati, and fleecy clouds. During the remainder of the day the sky was cloudless.
WED.	Positive and tension weak from 9h. a.m. till 2h. p.m. Nothing was shewn during the rest of the day.	See General Remarks.	Cloudless till 3h. 30m. a.m.; immediately after this time a thin cirrostratus suddenly came over and covered the sky till 9h. a.m. A dense fog prevailed between these times. At 11h. a.m. the sky became overcast, and remained so till 9h. 5m. p.m. It was generally cloudless during the remainder of the day.
THURS.	Positive and tension moderate from 11h. a.m. to 5h. p.m.; at other examinations during the day no electricity was shewn.	See General Remarks.	The sky remained cloudless till 4h. 50m. a.m., when cirrostrati and fleecy clouds suddenly collected and covered the sky. A dense fog arose about the same time. During the remainder of the day cumuli, cirrocumuli, cirrostrati, and fleecy clouds were distributed. The sky became overcast at 7h. p.m., and remained so during the rest of the day.
FRID.	At 3h. p.m. the electricity was positive and weak; at other examinations nothing was shewn.	See General Remarks.	Overcast with cirrostratus and scud throughout the day. Rain commenced falling at about noon, and continued in showers at intervals during the remainder of the day. The magnets were disturbed in the evening.
SAT.	Positive and tension moderately active at 1h. p.m.; at other examinations nothing was shewn.	See General Remarks.	Overcast with rain till 6h. 30m. a.m. At 9h. a.m. the clouds distributed were cumuli and masses of scud, which were prevalent generally till 2h. p.m. From 3h. p.m. till 6h. p.m. cumulostrati and cirrostrati were extensively distributed. The sky became cloudless before 7h. p.m., and remained so till midnight. A thin fog was prevalent during the evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been under repair during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 49.3; and the mean reading at 7h. 30m. P.M., was 54.9; the mean readings at the Royal Observatory for the same times were 49.5 and 53.4 respectively.

† The mean direction of the wind for the week is S.W.

Erratum in the report of last week.—Under General Remarks, and ranging with Friday, for 10h. 25m., read 9h. 45m. p.m.

# A TABLE OF Births and Deaths registered in the Metropolis, During the Week ending Saturday, October 10th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 41.]

Causes of Death	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 40.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 10th. The following selection of cases is made from the returns for the week ending Oct. 3rd.)

## CORONERS' RETURNS OF DEATHS BY VIOLENCE.

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
In St. George's Hospital, plasterer, 31, secondary deposits in the lungs, following compound dislocation of both wrists—fell with a scaffold, upon which deceased was at work, in Warwick Road, Paddington—the scaffold broke down by the falling of a brick pediment (post mort.) . . . . .	8 days	M. 27, sloughing of the knee from injury by falling from a horse . . . . .	7 weeks	M. 18, accidentally drowned in the River Thames off Limehouse, by the swamping of a boat from the swell of a steam-vessel (4 days under water).	
In Middlesex Hospital, son of a bricklayer, 12, injuries of the head by overbalancing, and falling from a loft-room into a mews. . . . .	1 hour	Plate-layer on the South Western Railway, 50, accidentally killed by the tender of a certain locomotive engine passing over his body. . . . .	instantly	Steam-engine driver, 27, accidentally drowned from having incautiously entered the paddle-box of a steam-boat, when the engines being set in motion, he was struck down into the water of the River Thames (under water 64 hours).	
In Middlesex Hospital, grocer, 34, fracture of the right leg from an accidental fall, when intoxicated . . . . .	8 days	In St. George's Hospital, formerly a lawyer's clerk, 22, compound fracture of left foot, leg, and thigh—run over by a train of the Great Western Railway Company, near Paddington terminus—fell when getting from a carriage when the train was in motion . . . . .	3 hours	Son of a supervisor of Excise, 4, drowned in the River Thames—by what means no proof.	
In Middlesex Hospital, M. formerly a servant, 86, exhaustion after fracture of the thigh bone, from slipping down in the street . . . . .	11 days	In London Hospital, brewer's man, 46, accidental injury to his knee from a jam by a cask, causing erysipelas, of which he died . . . . .	5 days	Journeyman cooper, 42, drowned—no marks of violence—no proof how he came into the water of the Thames (supposed to have been under water 3 days).	
In Middlesex Hospital, labourer, about 54, injury of the brain and skull from being wilfully and feloniously pushed out of a room into the street, by William Warrington . . . . .	1 day	F. 13 hrs., compression from a protracted labour (no inquest) . . . . .	*	Waterman (age not reported) drowned by falling into the River Thames, off the A. Citizen steam-boat accidentally.	
In Middlesex Hospital, F. (unknown), 22, erysipelas from an injured head, caused by herself in a fall . . . . .	*	M. 55, { injury to the head . . . . . 2 months apoplexy . . . . . 12 hours a large coagulum in left ventricle of brain (post mort.—no inquest).		Hanging and Suffocation:—	
In Middlesex Hospital, F. about 70 (rank unknown), effusion of blood into the brain, from a blow on the eye, by falling down in Oxford Street, while trying to avoid an omnibus. . . . .	30 hours	Wounds:—		M. 21 (no employment), temporary insanity—hanged himself with a handkerchief to the bar of a window in the cell of the police-station (Robert's-buildings)—feet touched the ground . . . . .	about 10 minutes
In London Hospital, labourer, 35, accidental by a fall from a yard-arm at West India Docks . . . . .	1 day	F. 35, suicide by cutting her throat with a broken blade of a penknife (state of mind unknown) . . . . .	2 minutes	Son of a surgical instrument maker, 9, suicide by hanging after receiving corporal punishment for taking brandy from a cupboard, from his father (of unsound mind).	
In London Hospital, porter, 44, threw himself from a window in a temporary state of insanity . . . . .	*	Drowning:—		Wife of a green-grocer, 64, hanged herself by a handkerchief to a spit-rack, when insane—found dead; previously attempted to bang herself, and had been in a private lunatic asylum.	
In London Hospital, sailor, 30, accidental by a fall from a mainyard of a ship. . . . .	*	Independent gentleman, 51, drowned in the River Thames, found without marks of violence—supposed to have been in the water about 6 hours.		M. 57, hanging—suicide—not known to be insane.	
In London Hospital, F. (unknown), 22, erysipelas from an injured head, caused by herself in a fall . . . . .	*	Single woman, ironer, 26, drowned in the River Thames—no evidence how she came into the water—found without marks of violence (post mort.) . . . . .		M. 58, suicide by hanging—of unsound mind.	
F. 33, natural death, which may have been accelerated by an accidental fall. . . . .	*	Assistant to a grocer, 18, probably drowned by slipping off a campshot at night, 5 days previously.		Son of a labourer, 5, suffocated in a privy by accidentally falling therein.	
In St. George's Hospital, shepherd, about 40, fracture of the 6th cervical vertebra, and other injuries—thrown down, butted, and gored by a bull in a shed, at Roehampton, when incautiously endeavouring to manage the bull in the absence of the regular attendant (post mort.) . . . . .	8 hours	M. 39, found dead in a water cask—drowned himself—insane.		Labourer, 18, suffocation by falling into a ditch in a fit, to which he was subject.	
In St. George's Hospital, carman, 47, mortification following laceration of left ham—run over in Ebury Street by a timber carriage and two horses—fell from the fore-horse, on which he was riding sideways, asleep (post mort.) . . . . .	6 days	M. 10, unknown; missed by his parents 4 days previously—supposed by them to have been drowned accidentally.		M. 4 mon., suffocation, how caused no evidence—found dead in bed without external mark of violence (post mort.)	
In London Hospital, cooper, 75, accidental from a fractured arm and ribs, caused by a crush from a wheel of a waggon in Shadwell . . . . .	6 days	M. 17, accidentally drowned while bathing.		Burns and Scalds:—	
Daughter of a grocer, 2, compression of the brain—upset in a child's chaise, drawn by a servant on the foot pavement in Great Smith Street—head struck the pavement. . . . .	13 hours	F. 17, found dead in the Regent's Canal—apparently drowned, without marks of violence.		In St. George's Hospital, single woman, servant, 19, burns of the body and limbs—gown took fire from a furnace, when stirring clothes in a copper . . . . .	8 days
		M. about 26, found drowned, but no evidence how.		In London Hospital, locksmith's daughter, 5, accidental from her clothes taking fire (at Bethnal-green).	
		Labourer, about 57, drowned by falling out of a boat, in consequence of its getting athwart a schooner at Pickle Herring Wharf (under water 2 days).		F. 3 mon., scalded by the upsetting of a sauce-pan . . . . .	9 days
		Builder, 55, found dead in the waters of a certain tank on his own premises, having been drowned therein—but how he came there, there is no evidence to show.		Poison:—	
		M. about 26, drowning.—(This is an imperfect return.)		Son of a carpenter, 5 months, laudanum (50 drops), administered by mistake, and in ignorance of what it was. . . . .	10 hours
		M. about 35, found dead in the River Thames—no marks of violence.		Dispensing assistant to a surgeon, 18, prussic acid (3 quarters of an ounce—Scheele's strength), being at the time in a distressed state of mind. . . . .	instantly
		M. 20, accidentally drowned in the River Thames off Peppford, by falling from the side of H.M.'s ship Athol.			

## CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES

## OR CAUSES THE PERSONS DIED.

duration		duration		duration	
M. 83, natural—not under medical treatment	*	M. 6 mon., found dead in bed without marks of violence—cause not ascertained	*	M. 16, natural death	instantly
M. newly born, found dead in his mother's bed room—no marks of violence—no evidence as to cause of death—no medical attendant at birth (post mort.)	*	M. newly born, natural death by the visitation of God	*	(previously complained of pain in the head.)	
M. 6 weeks, natural—no previous illness	*	F. 10, natural causes	*	F. 3 minutes, natural causes—premature birth	*
M. 72, natural—no previous illness	instantly	M. 5 weeks, found dead in bed by the side of his mother—cause unknown		F. 79, natural causes	sudden
F. newly born, not known whether born alive—greatly putrefied.	*	M. 41, natural death—cause unknown	sudden	F. about 37, found dead	*
M. 65, natural—no previous illness—was talking—suddenly sat down and died	instantly	M. new born, found dead in a privy		M. 8 weeks, natural causes	sudden
		M. about 32, natural death	*	M. 75, natural causes	sudden
				M. 62, natural causes	sudden
				F. 35, found dead—natural causes	
				Son of a bricklayer's labourer, 6 hours, died from the want of medical attendance	*

## CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

M. 75, natural—had a bowel complaint during 2 weeks	duration
F. 60, natural—dropsy of the legs (not under medical treatment)	1 month
M. 65, { inflammation and ulceration of the larger bowel (post mort.)	36 days
M. 60, natural—disease of heart, lungs, and kidneys (post mort.)	*
M. 5 mon., natural—convulsions	*
M. 13 wks., natural—subject to convulsions (no medical attendant)	5 weeks
M. 28, effusion of blood in and upon the brain—not known if from a fall, or natural causes, intoxicated	during 8 days before death
F. 30, congestion of the brain from grief at the death of her husband	*
F. 7 mon., natural—convulsions—teething	*
F. 6 mon., natural diarrhoea (at nurse—not under medical treatment)	1 week
F. 45, rupture of the middle meningeal artery, from disease of the heart (died in a few minutes—post mort.)	*
M. 64, natural—symptoms of disease of the heart—not under medical treatment	*
F. 4, natural death—sudden fit	*
M. 1, natural death, sudden, convulsions from teething	*
F. 64, natural death from strangulated hernia (p.m.)	14 days
F. about 78, natural death—probably from diseased heart (died instantly)	*

At Clapham, a gardener, 47, cholera morbus	3 days
F. 5 wks., inflammation of the bowels, from the want of proper medicine being administered in time, owing to the neglect of the nurse	3 days
F. 39, apoplexy of the brain	39 hours
F. domestic servant, 39, pulmonary consumption, accelerated by numerous severe contusions (great neglect by the deceased's sister)	*
F. 35, natural death—consumption—rupture of a vessel of the lungs	*
M. 33, natural death—sudden from abscess in the liver (post mort.)	*
F. 57, natural death—supposed from apoplexy sudden	*
F. 1, natural death—sudden, from convulsions	*
F. 66, natural death—sudden, from diseased heart	*
M. 28, natural death from rupture of a blood vessel	*
F. 38, natural death—sudden, from paralysis and apoplexy	*
M. 62, natural death by the visitation of God—diseased heart (post mort.)	*
M. 43, natural death of a fit	instantly
M. 36, natural death—apoplexy	instantly
M. 44, apoplexy	sudden
F. 1, convulsions from teething	*
M. 36, consumption and diseased liver	*
M. 4 mon., diseased liver—purpura, with hæmorrhage from ears, mouth, and throat	*

F. 4 days, convulsions	*
F. 53, suddenly, from disease of the heart	*
F. 2, irritation, consequent on disease of the frontal bone	*
F. 45, disease of the heart	*
M. 29, bursting of a blood vessel	*
Convicts { M. 68, fever and inflammation of the lungs	10 days
the "Unité" { M. 76, fever—pneumonia and ossified arteries	12 days
Hospital Ship, { M. 56, fever—pneumonia	6 days
The following are Medical Certificates from the Surgeon to the Hospital Ship, of the above cases of Convicts:	
(1) { fever (remittent)	11 days
{ jaundice	5 days
(post mort.), right lung hepatized, from recent pneumonia; much serous infiltration and softening; liver mottled, yellowish—bile-ducts being distended	4 days
(2) { fever	14 days
{ diarrhoea	14 days
(post mort.), serous infiltration of pulmonary tissue—ossification of aortic valves—small effusion into left pleura	
(3) { pneumonia and pleurisy	7 days
(post mort.), hepatization of both lungs—fibrinous and serous effusion into right pleural cavity	

## THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.—	duration
F. 70, gangrena scilicet—ossified arteries	*
See Coroners' Returns.	
Westminster H.—No deaths registered.	
Charing Cross H.—No deaths registered.	
Middlesex H.—See Coroners' Returns.	
University College H.—	
M. 13, pyelitis	*
Fever H.—No deaths registered.	
Small Pox H.—No deaths registered.	
King's College H.—	
In Red Lion Yard, Holborn, farrier, 48, English cholera (post mort.)	12 days
M. 4, typhus fever (post mort.)	2 weeks
M. 25, rheumatic fever	2 weeks
M. 55, cirrhosis of the liver and dropsy	6 months
F. 27, paraplegia	8 months

Bartholomew's H.—	duration
M. 41, { strangulated inguinal hernia	15 hours
{ operation (post mort.)	
M. 20, was in extreme state of exhaustion when admitted—died in 26 hours after	*
M. 35, hæmorrhage consequent on extensive carcinomatous ulceration of the neck	*
London H.—	
M. 46, phthisis	6 months
F. 42, eczema	1 year
F. 52, synochus	18 days
F. 40, ovarian dropsy	5 months
St. Thomas' H.—	
M. 36, phthisis	15 months
{ dissecting abscess	*
F. 28, { inflammation of the veins	*
{ lobular inflammation of the lungs	*
M. 28, dropsy	*
M. 23, necrosis of tarsal bones	17 months

Guy's H.—	duration
M. 48, diseased kidneys	*
M. 66, diseased kidneys	6 weeks
M. 66, phlegmonous inflammation of the arm	23 days
M. 30, phthisis	*
F. 13, fever—perforation of the intestine (p.m.)	*
M. 44, phthisis—acute bronchitis (post mort.)	*
M. 52, acute dysentery—pleuritic effusion	*
Dreadnought H.—	
{ typhus	53 days
M. 22, { abscess of ear	6 days
{ general arachnitis—coma—ulceration of Peyer's glands (post mort.)	
chronic pneumonia of right lung	6 months
M. 24, { dilated bronchi	
{ pneumonia of left lung (post mort.)	6 days
Unité H.—See Coroners' Returns of deaths by disease.	

## DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, TYPHUS, SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, CHILD BIRTH, DELIRIUM TREMENS, INTEMPERANCE.

Small Pox:—	duration
F. 1, natural small pox	8 days
F. 9, variola (natural)	12 days
F. 4, varicella in a debilitated constitution	*
Diarrhœa:—	
M. 4 mon., diarrhœa	7 days
{ gastritis	4 days
M. 4 mon., { diarrhœa (post mort.)	12 hours
F. 38, diarrhœa	2 days
M. 10 mon., { teething	*
{ diarrhœa	8 days
M. 12, diarrhœa	7 days
F. 95, diarrhœa	4 years
F. 82, diarrhœa	2 months
F. 5 months, diarrhœa	2 days
F. 4 mon., { diarrhœa	5 or 6 weeks
{ collapse—weaned at the age of 2 months	
M. 85, diarrhœa	3 days
M. 66, diarrhœa	2 or 3 weeks
M. 3 weeks, diarrhœa	3 days
M. 2 weeks, diarrhœa	3 days
F. 2, { dentition—diarrhœa	3 weeks
{ convulsions	10 days
F. 11 mon., { diarrhœa	3 weeks
{ hydrocephalus	
F. 6 mon., diarrhœa	4 days
M. 44, diarrhœa	*
F. 53, diarrhœa	*
F. 83, natural decay accelerated by diarrhœa, some weeks	
F. 72, diarrhœa	*
F. 72, diarrhœa	*
M. under 1, diarrhœa	*
F. 2 weeks, diarrhœa	10 days
F. 3 mon., diarrhœa	*
M. 58, general debility—diarrhœa	1 week
F. 7 weeks, diarrhœa	*
M. 59, natural decay—diarrhœa	3 weeks
M. 8 mon., diarrhœa	3 weeks
M. 7 weeks, diarrhœa	5 days
M. 6 mon., diarrhœa	*
F. 1, diarrhœa	*
M. 60, diarrhœa	3 weeks
F. 71, diarrhœa	3 weeks
M. 2, diarrhœa	*
F. 58, diarrhœa	*
M. 1, { marasmus	3 months
{ diarrhœa	*
F. 74, old age—diarrhœa	4 weeks
M. 8 mon., diarrhœa and teething	*
F. 14 weeks, { convulsions	from birth
{ diarrhœa	3 days

See Coroners' Returns.	
Other cases of diarrhœa not assigned to this head in abstract:	
F. 10 mon., { phthisis pulmonalis	6 months
{ diarrhœa—dentition	*
F. 36, { necrosis of the tibia	2 years
{ diarrhœa	10 days
M. 60, { hepatitis	8 years
{ diarrhœa	3 months

## RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

M. 76, chronic bronchitis—emphysema	about 9 years
F. 64, euccephaloid cancer of the uterus	2 years
M. 28, phthisis pulmonalis	6 months
M. 36, chronic enteritis	many years
{ diseased kidneys	1 month
F. 9 mon., { kidneys very much enlarged, and loaded with fat	*
F. 55, cancer of the stomach	*

Diarrhœa (continued):—	duration
{ diseased lungs	4 months
F. 1, { diarrhœa	2 weeks
{ dentition	6 months
M. 2, anasarca—diarrhœa	*
M. 76, { paralysis	2 years
{ diarrhœa	*
M. 54, { chronic hepatitis	3 months
{ diarrhœa	*
F. 11, { mucro-enteritis	18 months
{ diarrhœa—tubercular diathesis	*
M. 3 weeks, diarrhœa—convulsions—enlarged mesenteric glands	*
F. 64, { carcinoma	2 years
{ diarrhœa	2 months
M. 64, { abscess of the liver	8 months
{ diarrhœa	3 weeks
Dysentery:—	
M. 83, dysentery	12 days
F. 9 mon., dysenteric diarrhœa	*
F. 1, dysentery	*
M. 67, dysentery	16 days
F. 59, diarrhœa—dysentery	8 days
F. 60, dysentery	12 days
F. 2, dysentery	*

See Guy's Hospital.

Cholera:—

In Bull-steak Court, district of Whitechapel Church, wife of a plasterer, 45, common cholera \*

See Returns of Coroner, and of King's College Hospital.

Typhus:—	
M. 29, typhus fever	10 weeks
M. 4 continued fever	21 days
M. 10, typhus	8 days
M. 18, typhoid fever	4 days
M. 19, typhus—effusion on the brain (post mort.)	11 days
F. 17, typhus mitior	5 weeks
F. 29, typhus fever	*
F. 5, { pneumonia	28 days
{ convulsions	7 days
M. 6, febris	a few hours
F. 34, typhus	13 days
F. 66, low fever	*
M. 27, typhus	6 weeks
M. 58, typhoid fever	15 days
M. 4, typhus fever	3 weeks
M. 37, typhus	*
F. 20, brain fever	9 days
F. 27, typhus fever	*
F. 47, typhus fever—peritoneal inflammation	10 days
F. 22, { fever	34 days
{ mucro-enteritis	8 days
M. 5, { typhus fever	11 weeks
{ diarrhœa	6 weeks
F. 6, typhus fever	16 days
M. 63, typhus fever	*
F. 27, continued fever	1 month
F. 18, typhus gravior	11 days
F. 5 mon., hydrocephalus—fever	*

Typhus:—(continued)	duration
M. 12, typhus	10 days
F. 44, fever	2 weeks
M. 23, fever	14 days
F. 5, fever typhoid	1 week
M. 10, typhus fever	6 weeks
F. 3, fever—bronchitis	*

See above.	
Syphilis:—	
M. 4, ulceration of penis after syphilis	*
M. 6 mon., { syphilis	from birth
{ pertussis	1 month
F. 7 weeks, syphilis—atrophie	3 weeks
Hæmorrhage:—	
M. 29, atrophy—epistaxis (post mort.)	41 days
See Coroners' Returns.	

Malformation:—	
M. 10 weeks, { spina bifida	
{ ulceration of the tumor	10 days
M. 3 weeks, deficient nourishment from defective formation of mouth and throat	*
F. 2, atrophy from malformation of the chest	*
M. 2 days, congenital malformation of abdomen	*
F. 2, malformation and softening of the brain	*

Hernia:—	
M. 82, strangulated hernia	*
See Coroners' Returns, and of Bartholomew's Hospital.	

Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
F. 32, puerperal—typhus gravior	5 days
F. 30, puerperal fever	*
F. 40, miscarriage—uterine hæmorrhage, and exhaustion of the vital powers	6 days
F. 24, { premature delivery	
{ pericarditis	7 days
{ childbirth	3 days
F. 25, { puerperal convulsions	
{ congestion of the brain and kidneys (p.m.)	
F. 29, puerperal fever	12 hours
{ diarrhœa	10 days
{ which commenced 4 days before delivery, and continued till death	
F. 35, puerperal convulsions	12 hours
F. 42, childbirth with probable disease of the heart, 1½ hour	

Delirium tremens:—	
M. 35, delirium tremens	4 days
M. 47, delirium tremens	*
Intemperance:—	
M. 66, general decay from hard drinking	*
See Coroners' Returns.	

Other causes:—	
F. 63, cirrhosis	6 months
F. 40, { cirrhosis	3 years
{ icterus—hydrops	6 weeks
M. 63, emphysema—cirrhosis of the liver	*
{ impetigo larvalis	4 months
{ meningitis	3 days
M. 8 mon., { convulsions	17 hours
{ dentition	3 months

F. 87, biliary calculi—ulceration of gall bladder between 20 and 30 years	
F. 1, indigestion—spasmodic stricture of the bowels	4 days
{ enlargement of the heart and its cavities	*
M. 38, { hydropericardii—anasarca	*
M. 62, perforation of stomach	10 hours

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, 10th October, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers								Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND					Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning			
			Dry			Dew Point	Highest in the sun, as shown by a self-register- ing Thermometer	Lowest on the grass, as shown by a self-register- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12	Greatest	Least		General Direction		Pressure in lbs. on the square foot					Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at any examination.	See General Remarks.	Cumuli, cumulostrati, cirrostrati, and scud covered the greater part of the sky throughout the day.
MON.	Nothing was shewn throughout the day.	See General Remarks.	At about 9h. a.m. the sky was one-half covered with a brownish scud; with this exception, it was generally overcast till 6h. p.m. It was generally cloudless about 7h. p.m., but the greater part of the sky was covered with cirrostrati and scud afterwards till midnight. Several imperfectly formed lunar halos were visible during the evening. Rain was falling occasionally throughout the day.
TUES.	Negative and moderately active about 1h. 20m. p.m. Nothing was shewn at any other times.	Rain falling. See General Remarks.	The sky was generally overcast throughout the day. Rain was falling at intervals till 2h. p.m. A lunar halo was visible about 9h. p.m. The wind was blowing in occasional gusts to 3lb. on the square foot throughout the day.
WED.	Negative and active from 9h. 53m. a.m. to 9h. 58m. a.m. Sparks were frequent, but no current was shewn. Slightly positive about 3h. p.m., but nothing shewn at any other times.	Rain falling heavily. See General Remarks.	The sky was generally overcast throughout the day, except about 7h. a.m. and noon, at which times it was about one-half covered with cirrostratus and scud. At 6h. 45m. a.m. a very fine double rainbow was visible. It lasted about 3 minutes. Rain was falling occasionally from 7h. a.m. till noon. The wind blew in occasional gusts to 4lbs. on the square foot.
THURS.	Slightly positive about noon, at 3h. p.m., and about midnight. Nothing was shewn at any other times.	See General Remarks.	The sky was mostly clear from 5h. a.m. to 9h. 30m. a.m., and from 9h. p.m. till midnight. With these exceptions it was overcast till noon, and about three-tenths were covered with cirrostratus and scud from that time till 9h. p.m. Rain was falling occasionally during the day. At 6h. 45m. p.m. a squall of rain and hail commenced; it continued till 1h. p.m., when it ceased suddenly. Wind was blowing in frequent gusts to 4lb. on the square foot. A pressure of 6lbs. on the square foot was shewn at 6h. 40m. p.m., and a gust to 8lbs. at 2h. 25m. p.m. The magnets were disturbed during the day.
FRID.	Slightly positive till 1h. a.m. Negative and active from 6h. 45m. p.m. to 6h. 55m. p.m. Sparks were frequently exhibited, but no galvanic current shewn. Nothing was shewn during the remainder of the day.	See General Remarks. Rain falling. See General Remarks.	Cloudless till 2h. a.m., when it became overcast, and continued so throughout the day. Rain was falling occasionally during the day. Wind in occasional gusts to 3lb. on the square foot. The magnets were disturbed during the evening.
SAT.	No electricity was shewn at any time throughout the day.	See General Remarks.	From 4h. a.m. to 6h. a.m. the sky was generally cloudless; with that exception it was overcast till 3h. 30m. p.m. Cirrostrati and masses of scud were principally prevalent. During the remainder of the day a large portion of the sky was free from cloud, and it became quite clear at 8h. 20m. p.m. The wind was blowing with nearly a constant pressure of 4lb. on the square foot from 7h. a.m. to 9h. 30m. a.m. From 11h. a.m. to 2h. 30m. p.m. frequent gusts to 6lbs. on the square foot occurred. After that time the strength of the wind considerably decreased.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The reading of the maximum thermometer, placed on the grass, was inadvertently omitted on 6th, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been under repair during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 54°8; and the mean reading at 7h. 30m. P.M., was 56°2; the mean readings at the Royal Observatory for the same times were 54°3 and 55°9 respectively.

† The mean direction of the wind for the week is S.S.W.

A TABLE OF  
**Births and Deaths registered in the Metropolis,**  
*During the Week ending Saturday, October 17th, 1846.*

ANNUAL SERIES VII.]										PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.										[No. 42.]																																																																	
Causes of Death		Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.		Causes of Death. EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 41.

**NOTE.**—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, *in years, except when otherwise stated*. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

## CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

*Fractures and Contusions (continued).— duration*

In St. Thomas's Hospital, driver of a van,  
about 33, effects of a fracture of his jaw  
from the kick of a horse drawing his  
master's van, near Eltham, Kent ..... 3 hours  
F. 5 hrs., compression during birth (*no inquest*).  
Widow of a butcher, 42, congestion of the  
vessels of the brain, which may have been  
caused by marks of violence—but how  
unknown ..... \*

M. 1, injury of the head—hydrocephalus—(*no  
inquest—an imperfect return*) ..... 3 days  
Cabinet maker, 52, not known whether he died  
from injury of the head, produced by a blow  
knocking him down on the pavement, or  
sloughing of the back for want of a proper  
bed to lie on in the hospital—who gave the  
blow not known ..... 18 days  
Carpenter, 53, injury of the head from the  
accidental fall upon it of a brick from a  
seafoald ..... 15 weeks

In Guy's Hospital, labourer, 42, fracture of his  
spine by an empty hogshhead falling from a  
crane upon him, whilst unloading a barge  
at Depot Wharf, Tooley Street (*post mort.*) 1 week  
M. 34, { injury to the head ..... 14 days  
          { transmus (*no inquest*) ..... 3 days  
F. 9, { injury to the spine .....  
      { abscess (*no inquest*) ..... 3 years

*Wounds:—*

Painter, 26, suicide with a pistol ball, fired into  
his head—state of mind unknown ..... \*

## CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

M. 42, effusion of blood into the brain . . . . .	<i>duration</i>
F. 41, natural death, accelerated by excessive drinking of ardent spirits . . . . .	*
F. 24, natural death—rupture of a vessel in the head . . . . .	<i>sudden</i>
M. 72, sudden death from diseased heart . . .	*
M. 28, natural death—supposed apoplexy . . .	*
M. 24, natural death—sudden—from affection of lungs and kidneys . . . . .	*

CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES  
OR CAUSES THE PERSONS DIED.

M. 55, unknown, became insensible, and died in 7 <sup>duration</sup> hours

## THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

*NOTE.*—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

	<i>duration</i>
<i>Westminster II. :—</i>	
M. 55, pleuro-pneumonia ( <i>post mort.</i> ) . . . . .	8 days
<i>Charing Cross II. :—</i>	
M. 45, phthisis pulmonalis . . . . .	6 or 8 months
<i>Middlesex II. :—</i>	
F. 37, phthisis . . . . .	*
<i>University College II. :—</i>	
M. 17, pneumonia typhoid . . . . .	*
M. 44, albuminuria—mortification . . . . .	*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension weak at 11h. a.m. and 3h. p.m.; at other examinations no- thing was shewn.	See General Remarks.	Cirrostratus and masses of dark scud generally covered the sky throughout the day. Frequent showers of rain fell in the morning and afternoon. The sky became cloudless at 10h., and remained so till midnight.
MON.	Positive and tension moderately active from 1h. p.m. to 7h. p.m.; the maximum at 3h. 20m. p.m. Nothing was shewn at other times during the day.	See General Remarks.	The sky was about one-half covered with cirrostratus and light clouds till 5h. a.m. The greater part was afterwards covered with cirrostratus and scud throughout the day, except for a short time during the evening. Rain was falling about midnight.
TUES.	Nothing was shewn till 3h. 20m. p.m. From this time till 11h. 20m. p.m. it was positive with moderate tension. The maxi- mum at 5h. p.m.	See General Remarks.	The sky was mostly overcast till 9h. p.m., when about one-fifth was covered with cirrostratus. It became quite cloudless at 9h. 20m. p.m., and remained so till 11h. 10m. p.m. After the latter time about one-third part became covered with cirrostratus. Before midnight the amount of cloud suddenly increased. Rain was falling in the early part of the evening. The wind was blowing in gusts to 3lbs. and 5lbs. on the square foot from 6h. p.m. to 1h. p.m.
WED.	Positive and tension weak till 5h. a.m. At 9h. 30m. a.m. it was negative and ten- sion moderately strong. Nothing was shewn during the rest of the day.	See General Remarks. Rain falling.	Overcast with rain till 4h. p.m. After this time the clouds were broken for about an hour. At 5h. p.m. they suddenly collected and covered the sky till 5h. p.m., when a heavy shower of rain fell. During the remainder of the day the amount of cloud was small, consisting of cirrostratus near the horizon. The wind was blowing in frequent gusts from 3lbs. to 4lbs. on the square foot, from 11h. a.m. to 2h. p.m. The readings of the barometer decreased half an inch from 1h. a.m. to noon.
THURS.	Nothing was shewn till 9h. a.m., when it was negative and tension strong. It re- mained so till 11h. 30m. a.m. Frequent sparks and currents were shewn. Positive and tension moderately strong at 5h. 20m. p.m. And negative and moderate at 11h. 20m. p.m.	Rain falling. See General Remarks. Rain falling.	Three-fourths of the sky were covered with cirrostratus and scud till about 6h. a.m., when it became quite overcast. Rain began to fall heavily about this time, and lasted without intermission till 1h. p.m. The readings of the barometer continued to decrease rapidly till 5h. 40m. a.m., when the minimum (28.824 in.) took place. In the afternoon the greater part of the sky was covered with cirrostratus and scud till 4h. p.m.; it was nearly cloudless from 5h. p.m. to 7h. 20m. p.m., and generally overcast during the remainder of the day. Rain began to fall steadily at 10h. p.m.
FRID.	Negative and tension active from 2h. a.m. to 5h. a.m. Sparks were shewn. Positive and tension moderate from noon till 10h. p.m.	Rain falling heavily. See General Remarks.	Overcast with heavy rain till 6h. 30m. a.m. From this time to 10h. a.m. about one-third part of the sky was covered with cirri and cirrostrati. During the remainder of the day the amount of cloud was variable, consisting of cumuli, cirrostrati, and scud. Frequent showers of rain fell in the morning.
SAT.	Positive and tension weak from 11h. a.m. to 5h. p.m. Nothing was shewn during the rest of the day.	See General Remarks.	The sky was generally overcast with cirrostratus and dense scud till 2h. p.m.; during the evening about one-third part of the sky was covered with cirrostratus. It became nearly overcast at 11h. p.m. A thin fog was prevalent about this time. Rain was falling heavily from 6h. 20. a.m. to 5h. a.m.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The reading of the maximum thermometer, placed on the grass, was inadvertently omitted on 6th, 9th. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been under repair during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 48.7; and the mean reading at 7h. 30m. P.M., was 51.0; the mean readings at the Royal Observatory for the same times were 48.2 and 49.4 respectively.

† The direction of the wind for the week has been generally S., but it has been variable.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, October 24th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 42.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 24th. The following selection of cases is made from the returns for the week ending Oct. 17th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Wounds:—	duration
In the Westminster Hospital, waiter, 56, contusion, accelerated by fracture of the right knee—stepped on a piece of orange-peel, when walking on Westminster Bridge	61 days	Labourer to an engineer, 40, injury to the ankle joint, from a large piece of iron, called a chuck, falling on him accidentally	19 days	In the Westminster House of Correction, prisoner, 40 (former occupation unknown), disease of the brain supposed to have been caused by a wound on the head	many years ago
In King's College Hospital, porter, 27, irritative fever, following rupture of the urethra—fell astride a door when jumping over a counter in Chancery Lane (post mort.)	18 days	In Bartholomew's Hospital, leather dresser, 81, fractured leg and thigh, caused by the wheel of a dray passing over it, while he was crossing Snow Hill	6 weeks	(By what means inflicted?)	
Wife of a coachmaker, 36, inflammation of the pleura	3 days	accidental injury of the hip joint	6 years	M. 25, suicide with a pistol—state of mind unknown	
accelerated by weakness, arising from recent delivery	*	M. 16, {strumous abscesses	4 years	Drowning:—	
and an accidental fracture of her right leg by a fall at Plough Place	*	hectic fever (no inquest—how was injury caused?)	3 weeks	Cahnet maker, 40, found dead without marks—apparently drowned.	
M. 11, injury of the head by falling from the top of a gymnastic rope in a school playground	2 hours	M. 75, fractured rib and contused head	3 weeks	M. (age unknown), found dead—apparently drowned.	
F. 1, accidental death from a fall, and fractured third rib, causing inflammation of lung and pleura (post mort.)	*	In King's College Hospital, son of an engine driver, 15, mortification, following laceration of left arm, and contusion of left shoulder and chest, caused by a steam printing machine (at Mr. Cox's Office, 5, Great Queen Street, Lincoln's Inn Fields), when incautiously putting paper into the cylinder	4 days	Burns and Scalds:—	
Sea apprentice, 18, instant death by a fall from the maintop yard of a ship, on the deck	*	In Guy's Hospital, F. 35, sudden peritonitis from a strain (when and how caused?—no inquest)	*	Widow, 75, burnt by a fire, which occurred in her own room at Little Bartholomew Close, the origin of which is unknown	instantly
				Daughter of a printer, 18, suffocated by a shop taking fire, from an explosion of fireworks	instantly
				Poison:—	
				Spinsters, 21, taking landanum to produce sleep—congestion of the brain (post mort.)	2 or 3 hours

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. about 35, pulmonary apoplexy	about 15 minutes	M. 8 mon, natural—not previously ill—convulsed suddenly, and died	instantly	F. 2 mon, natural—diarrhoea	4 hours
F. 52, exhaustion from exposure to the wind and rain at night, having wandered out in ill health, while of unsound mind	*	convulsed twice a fortnight before.		F. 28, peritoneal inflammation—sudden death (post mort.)	*
F. 38, sanguineous apoplexy—became suddenly insensible in a tavern, and died in	2 hours	F. about 70, natural—exhaustion, accompanying a diet of spirituous drink, without solid food	*	M. 30, found dead—sudden—from a ruptured vessel of the lungs	*
				F. 35, effusion in the brain, producing apoplexy	1 hour

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 73, natural—not under medical treatment	*	F. under 1, natural—no previous known illness	*	F. 7 wks., found dead without marks of violence	*

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H.:—	duration	Fever H.:—	duration	Bartholomew's H.:—	duration
M. 25, malignant tumour of the upper jaw and face.	*	fever	21 days	F. 18, scarlet fever	18 days
M. 53, gangrene of the right lower extremity	*	M. 14, {extensive ulceration of small intestine, involving peritoneal coat—peritonitis (post mort.)—from St. Martin-in-the-Field's Workhouse—in hospital	17 days	F. 44, {strangulated hernia	*
M. 65, {mottled degeneration of kidneys—granular liver—anasarca—ascites	*	F. 25, cause of death not reported, because the medical attendant had not had time to make a post mort. examination.	*	F. 54, ascites	*
Westminster H.:—See Coroners' Returns.		Small Pox H.:—		F. 27, typhus fever	*
Charing Cross H.:—		M. 27, small pox (not stated whether vaccinated)	*	F. 7, ascites	*
F. 67, general decay (post mort.)	*	King's College H.:—		M. 29, fever and pleurisy	*
Middlesex H.:—		M. 26, {typhus fever	14 days	M. 18, typhus fever	*
M. 50, parapneumonia	*	{pneumonia	10 days	M. 34, {retention of urine	36 hours
F. 27, phthisis	9 months	F. 52, {typhus	8 days	operation—lived	3 days
F. 50, diseased liver and heart—dropsy	*			M. 27, fever	25 days
University College H.:—No deaths registered.				M. 49, disease of the bladder	*
				M. 53, dropsy and disease of the heart	*
				M. 39, strumous inflammation of peritoneum and pleura, with consolidation of right lung, and some calcareous deposit in the left, several years	*

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued).—

London H.:	duration
M. 49, consumption	9 months
M. 23, diseased knee—consumption	*
M. 30, erysipelas	*
M. 32, consumption	7 months
F. 8, dropsy after scarlet fever	2 months

St. Thomas' H.:	duration
M. 36, disease of the heart—dropsy	10 months
M. 22 (died suddenly—no post mort. exam. allowed).	*
M. 50, paraplegia—softening of the spinal cord	4 months
M. 50, rheumatic endocarditis—dropsy	8 or 9 months
M. 16, typhus	1 month

Guy's H.:	duration
M. 27, malignant disease of the liver	*
M. 32, fever	*
M. 4, fever—cancerum oris	*
M. 55, chronic laryngitis	6 weeks
M. 36, ascites—hepatic disease	9 weeks
F. 54, bronchitis	*
F. 28, diseased heart—dropsy	*
F. 38, phthisis	1 year
Dreadnought H.:	duration
M. 21, { typhus	18 days
{ ulceration of Peyer's glands.	
{ perforation of ileum	2 days
{ general peritonitis (post mort.)	

Dreadnought H. (continued):	duration
M. 22, { phthisis	*
{ pleuro-pneumonia	14 weeks
{ miliary tubercle in both lungs	10 weeks
{ yellow tubercle in the spleen (p.m.)	*
M. 21, { pericarditis	27 days
{ with effusion of lymph and serum—	
{ large vegetation in the aortic valves	
{ (post mort.)	
M. 19, { typhus	10 days
{ typhoid thickening of Peyer's glands,	
{ without ulceration (post mort.)	

## DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox:	duration
F. 25, small pox (not stated whether vaccinated)	10 days
F. 8 mon., small pox (not vaccinated)	9 days
See Small Pox Hospital.	

Diarrhœa:	duration
M. 3 mon., diarrhœa and convulsions	3 days
M. 9 mon., diarrhœa	3 weeks
M. 2 mon., diarrhœa	7 days
F. 7 weeks, diarrhœa	*
F. 3, { diarrhœa	1 month
{ convulsions	
M. 76, atrophy from diarrhœa	30 days
F. 15 weeks, diarrhœa	about 13 weeks
F. 6 mon., dentition—diarrhœa—pertussis	1 month
M. 2 wks., { diarrhœa	14 days
{ inanition	
F. 28, { atrophy	5 years
{ diarrhœa	5 days
M. 3 mon., diarrhœa	4 weeks
F. 1, diarrhœa	7 days
M. 5 mon., diarrhœa	8 days
F. 32, diarrhœa	21 days
M. 30, diarrhœa—marasmus	*
F. 1, chronic diarrhœa	*
M. 3 weeks, diarrhœa—convulsions	4 days
M. 73, diarrhœa and vomiting	5 days
M. 1, diarrhœa	11 weeks
M. 1, diarrhœa	3 months
F. 6 mon., diarrhœa	3 months
M. 1, diarrhœa from dentition	*
M. 52, diarrhœa	*
M. 2 mon., diarrhœa	5 days
F. 5 mon., { diarrhœa	3 weeks
{ atrophy	3 months
F. 1, diarrhœa	3 days
M. 1, diarrhœa	7 days
F. 80, diarrhœa	3 weeks
F. 90, diarrhœa	3 weeks
F. 54, diarrhœa	6 weeks
M. 71, diarrhœa	*
F. 1, teething and diarrhœa	6 weeks

See Coroners' Returns.

Other cases of diarrhœa not assigned to this head in abstract:	duration
M. 81, { enlargement of the prostate gland, many years	1 week
{ diarrhœa	1 year
M. 20, { consumption	1 month
{ diarrhœa	5 months
F. 6, { cold and pneumonia	3 months
{ diarrhœa and debility	3 months
F. 43, { chronic disease of the stomach	4 days
{ diarrhœa	10 days
M. 1, { pneumonia	5 months
{ diarrhœa	3 days
F. 37, { phthisis pulmonalis	3 days
{ diarrhœa	

Dysentery:	duration
M. 17, { dysentery	15 days
{ under treatment 5 days (post mort.)	
M. 4, dysentery	14 days
M. 40, dysentery	4 years

Cholera:	duration
F. 1, diarrhœa cholericæ—convulsions—cerebral effusion	12 days
In Navarino-terrace, North Dalston, widow, 37, English cholera	36 hours
Typhus:	duration
M. 5, { fever of brain	8 days
{ convulsions	36 hours
F. 2, { effusion in the head	3 days
{ simple fever	7 days
M. 4, { typhus fever	7 days
{ congestion of the brain	
F. 53, continued fever—pneumonia	*
F. 8, { typhus	3 weeks
{ peritonitis	3 days
M. 24, typhus fever	14 days
F. 5, fever (typhoid)	3 years
M. 60, { bronchitis	10 days
{ typhus	3 weeks
M. 19, fever	15 days
M. 25, { typhus gravior	4 days
{ effusion into the air-cells of the lungs,	
{ (post mort.)	
M. 80, fever	3 weeks
F. 21, adynamic fever and pulmonary inflammation	4 months
F. 28, { fever	3 months
{ bedsores	
M. 1, muco-enteritis—fever and apthæ	6 days
F. 71, { erysipelas of face, &c.	6 days
{ typhus	*
M. 31, typhus fever	14 days
F. 5, synochus	1 week
F. 9, fever	22 weeks
F. 9, { synochus	9 weeks
{ abscess	
F. 49, typhus fever—sloughing of the back	*
M. 36, continued fever	3 weeks
F. 6 weeks, typhus fever	6 days
F. 35, erysipelas—typhoid fever	3 weeks
M. 34, typhus fever	5 weeks
F. 1, cold and fever	5 days
M. 7, { fever	3 days
{ congestion of the brain	
M. 7, fever	18 days
F. 5, typhus fever	14 days
M. 11, typhus fever	11 days
F. 66, typhus fever	14 days
F. 3, typhus fever	*
M. 76, old age—typhus	*
M. 68, bilious fever	*

Remittent Fever:	duration
F. 2, { remittent fever	3 weeks
{ convulsions	*

Infantile Fever:	duration
M. 1, infantile fever	2 weeks

Syphilis:	duration
M. 7 weeks, { congenital syphilis	3 weeks
{ weak-born	
M. 1, secondary syphilis	*
F. 49, { syphilis	3 years
{ paralysis	9 weeks

Hæmorrhage:	duration
See Coroners' Returns.	

Malformation:	duration
F. 6 weeks, { spina bifida	from birth
{ exhaustion	
M. 6 days, malformation of the howels	*
F. 5 weeks, malformation of the pbarynx	*

Hernia:	duration
M. 25, hernia	*
F. 78, umbilical hernia (no operation)	3 days
F. 20, rupture of the stomach, the result of old disease	4 years

See Bartholomew's Hospital.

Childbirth:	duration
The time elapsing from commencement of labour to death should invariably be returned.	
F. 45, uterine hæmorrhage after labour	3 hours
F. 25, puerperal fever	3 days
F. 36, { childbirth	*
{ inflammation of the womb after her confinement	
F. 25, { bilious vomiting—cholæ	40 hours
{ premature labour—exhaustion	*
F. 38, { low fever	*
{ supervening 8 days after childbirth	
F. 40, { violent spasm of the chest	6 years
{ delivery of her 9th child	2 hours
{ spasm of the heart	
{ very little hæmorrhage from the uterus	
F. 27, puerperal peritonitis	5 days
F. 25, puerperal fever	7 days
F. 29, { childbirth	7 days
{ inflammation of the womb and peritonæum	
F. 37, { childbed	4 days
{ inflammation of brain and effusion	*
F. 37, { parturition	7 days
{ phthisis	6 years
F. 37, { childbirth	10 days
{ (assigned to phthisis in abstract.)	

Delirium tremens:	duration
F. 46, delirium tremens	*
M. 32, { delirium tremens	*
{ inflammation of the mucous membrane of the stomach—enlargement of the liver (post mort.)	
M. 43, delirium tremens	*
M. 42, delirium tremens	7 days
Intemperance:	duration
M. 44, diseased liver from drinking—dropsy	*
{ softening of the liver	6 months
M. 32, { melæna	6 days
{ intemperance	

See Inquests.

Privation:	duration
See Coroners' Returns.	
Tania:	duration
M. 7, { tania	3 years
{ cephalitis	14 days
{ effusion	5 days

Operation:	duration
F. 49, pleuro-pneumonia following amputation of the breast	*
Blister:	duration
F. 9 mon., sloughing of the integument of the chest from the application of a blister	*

## RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

duration	duration
M. 12 days, heart enlarged, lungs and heart congested—breathing and circulation embarrassed—œdema nigra of left fore arm	from birth
{ inflammation in one of the small intestines	2 days
M. 1, { tinea	*
{ epilepsy	4 days
M. 62, paralysis	4 years
F. 69, granular liver and kidneys	*

duration	duration
M. 53, tubercle of pancreas, adherent to stomach; at point of adhesion, ulceration of mucous membrane of the stomach	disease of long standing in an incipient form
M. 18, epilepsy and typhus	*
M. 55, phthisis	*
F. 13, pericarditis	1 year
M. 49, exhaustion from long-continued disease of the brain, and induration of the dura mater	*
F. 8 mon., hydrocephalus	*

duration	duration
F. 31, { lateral curvature of the spine, with hypertrophy of the heart	3 months
{ venous congestion of the lungs	8 days
F. 2, tumour in the fauces	*
M. 1, bronchitis—pneumonia	14 days
M. 3, disease of the bladder	8 days
M. 5, encephalitis	*
M. 30, { rheumatism	6 years
{ hypertrophy	
{ dilatation of the heart	1 week
F. 4, hydrocephalus	*

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 24th October, 1846.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Negative and tension moderate at 9h. 30m. a.m. Nothing was shewn at any other examination.	Rain falling. See General Remarks.	Overcast, with rain falling till about 3h. p.m., when the sky became about one-half covered with cirrostratus, fleecy clouds, and scud. It continued in that state till about 7h. 30m. p.m., and was cloudless during the remainder of the day. Several flashes of lightning were seen during the evening.
MON.	Nothing was shewn till 1h. p.m. Slightly positive from that time till 10h. p.m. Negative and very active at 11h. 20m. p.m. Sparks were abundant, and a galvanic current shewn.	See General Remarks. Rain falling.	Cloudless till about 10h. a.m., from which time till 10h. p.m. the sky was about one-half covered with cirrostrati, cumuli, and scud, except at about 3h. and 7h. p.m., when it was nearly cloudless. It was overcast, with rain falling at midnight.
TUES.	Occasional weak negative electricity during the morning. Negative and very active at 3h. 20m. p.m.	Rain falling.	Overcast till 10h. a.m., with heavy rain falling occasionally. The sky was then about one-half covered with cumuli, cirrostrati, and scud till 5h. p.m., when it became overcast again, and a heavy shower of rain fell. The sky was generally about one-half covered with cirrostratus and scud during the remainder of the day, except at about 9h. p.m., when it was cloudless.
WED.	Slightly positive from noon till 6h. p.m. Nothing shewn at any other times.	See General Remarks.	Overcast till 10h. 30m. a.m., with heavy rain falling occasionally. In the afternoon about three-fourths of the sky were covered with cirrostratus and masses of dark scud. It was overcast from 9h. till midnight. The wind was blowing in frequent gusts to S and OBS. on the square foot throughout the day. A pressure of 9lbs. on the square foot was shewn by the anemometer at 6h. 30m. a.m.; also another at 10h. 15m. p.m. At 10h. 20m. the lowest reading of the barometer took place, being 29.823 in.
THURS.	Nothing was shewn throughout the day. Except at 11h. 50m., when active negative electricity was exhibited during a shower of rain.	See General Remarks.	The sky was overcast throughout the day, except at about 9h. p.m., when it was half covered with cirrostratus. Rain was falling occasionally throughout the day. The wind was blowing in frequent gusts to 4lb. on the square foot. A pressure of 7lbs was shewn at 11h. 25m. a.m.
FRI.	Positive and tension moderate from 9h. a.m. till noon. Negative and very active from 3h. 30m. p.m. till 6h. 10m. Sparks and a slight galvanic current were shewn. Nothing was exhibited at any other times.	See General Remarks. Rain falling.	Overcast till 6h. a.m.: the sky was then about one-half covered with cirrostratus, fleecy clouds, and scud till noon, and generally clear from that time till 10h. p.m. The greater part of the sky was covered with cirrostratus at midnight. Rain was falling heavily from 5h. a.m. till 6h. 20m. a.m.
SAT.	Positive, with tension occasionally moderate, till 8h. p.m.; Except about 7h. a.m. and 3h. p.m., when it was negative and very active.	See General Remarks. Rain falling.	The sky was nearly cloudless till 2h. a.m.—generally overcast with occasional heavy rain from that time till 6h. a.m. The sky was then about one half covered with cloud till 2h. p.m., and generally overcast during the remainder of the day. Rain was falling at intervals from 3h. p.m. till 5h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The reading of the maximum thermometer, placed on the grass, was inadvertently omitted on 6th, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Heury, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer is under repair. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 47.8; and the mean reading at 7h. 30m. P.M., was 48.8; the mean readings at the Royal Observatory for the same times were 47.2 and 47.6 respectively.

† The direction of the wind for the week is S.W.

**Births and Deaths registered in the Metropolis.**

*During the Week ending Saturday, October 31st, 1846.*

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 43.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 31st. The following selection of cases is made from the returns for the week ending Oct. 21th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds (continued):—	duration
M. 10, fracture of the dorsal vertebra, by falling from a wash-hand stand, upon the ground (no inquest) . . . . .	4 years	M. 43, suicide with a pistol fired into his chest—insane . . . . .	*	Wife of a captain in the merchant service, 36, burns from her apron catching fire at a kitchen grate, while cooking . . . . .	13 days
M. 25 (no occupation), chronic abscesses of the body . . . . .	16 years	<i>Drowning:—</i>		In St. Thomas's Hospital, daughter of a bricklayer, 3, suddenly, from spasm of the glottis, having been accidentally scalded by drinking boiling water from a tea kettle . . . . .	about 1 hour
"following injuries of spine and left leg—run over by a phaeton and horses, while getting from behind a vehicle he had been riding on (no inquest—no medical attendant of late) 17 yrs. ago		F. 19, asphyxia—threw herself from Waterloo Bridge, when in a state of temporary insanity (under water 15 minutes).		<i>Poison:—</i>	
In Guy's Hospital, gardener, 56, fracture of the right leg, and severe injury to the pelvis, by being accidentally run over by the wheel of a loaded van . . . . .	48 hours	F. 23, found dead, apparently drowned.		F. 9 mon., morphia given by the mother in ignorance of the quantity or fatal effects. . . . .	at least 17 hours
Son of a fancy stationer, 11, blow on the head from the hind step of an omnibus, from which he fell, when riding illegally. . . . .	instant	Servant (single woman), 24, drowned herself in a temporary state of insanity, having lived after it . . . . .	7 days	M. 41, suicidal poisoning with arsenious acid, in a "vermin powder" . . . . .	8 hours
Porter on the Eastern Counties' Railway, 26, accidental death by a fall from a railway carriage . . . . .	*	<i>Burns and Scalds:—</i>		M. 44, prussic acid—suicide (a drunkard—state of mind unknown) . . . . .	*
F. 2, dislocation of the hip joint . . . . .	18 months	In Guy's Hospital, apprentice to a printer, 21, accidentally burnt while making fireworks 8 days			
"strumous inflammation (no inquest) . . . . .	*	In St. Thomas's Hospital, daughter of a labourer, 4, accidentally burnt by her clothes taking fire . . . . .	24 hours		

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 59, pulmonary apoplexy—flabby heart—large congested liver—found dead in bed—(post mort.) . . . . .		F. 2, natural—not under medical treatment—had rickets . . . . .	*	F. 33, sudden death from rupture of a blood vessel (post mort.) . . . . .	*
F. 35, natural—disease of the heart—became insensible suddenly, and died instantly.		F. 10 days, natural—diarrhoea . . . . .	3 days	M. 65, sudden death from diseased heart . . . . .	*
F. 41, hæmorrhage from the womb, from a placenta presentation ignorantly treated by a midwife—died undelivered . . . . .	*	M. 56, natural—disease of the stomach—had spit blood . . . . .	for 6 months	M. 28, natural death, accelerated by excessive drinking . . . . .	*
F. 31, consumption . . . . .	some months	M. 33, whether natural, or from drunkenness unknown—went to bed tipsy—vomited a harmless watery fluid.		M. 66, natural death—constipation of bowels 5 days	
F. (age not known), not known if natural, or from drinking spirituous liquors . . . . .	*	M. 11 mon., accidentally choked in conghing	*	M. 55, sudden death from rupture of a blood vessel . . . . .	*
		F. 9 mon., exhaustion from diarrhoea, consequent upon early weaning . . . . .	*	F. 49, natural death—sudden—supposed to be from effusion . . . . .	*
		F. 33, apoplexy, supervening on intoxication.	*	F. 75, natural death—sudden—from apoplexy . . . . .	*
				F. 23, natural death—apoplexy . . . . .	*

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

M. about 60, natural—previous illness . . . . . of 4 hours  
fell down suddenly, and never spoke afterwards.

M. newborn, found dead, without marks of violence . . . . .

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H.:	duration	St. George's H. (continued):—	duration	University College H.:	duration
low pneumonia . . . . .	about 3 weeks	F. 30, obstruction of the bowels, with dilatation of small intestines . . . . .	*	M. 31, peritonitis tubercular—pleuro-pneumonia—hydrothorax . . . . .	several weeks
M. 55, incipient cirrhosis of the liver—greatly enlarged spleen, with serofulous deposits—anasarca of lower extremities (post mort.) . . . . .		peritonitis (post mort.) . . . . .	about 5 days	M. 47, capillary phlebitis . . . . .	2 days
M. 28, erysipelas of the leg . . . . .	*	<i>Westminster H.:</i>		M. 23, phthisis . . . . .	9 months
M. 57, pulmonary consumption . . . . .	*	{ continued fever . . . . .	7 days	F. 26, phthisis . . . . .	*
M. 23, hard tumor of the antrum . . . . .	*	F. 26, { chronic degeneration of kidneys (post mort.) . . . . .	7 days	F. 34, phthisis—pneumonia . . . . .	*
M. 50, debility—lupus exedens and scabies . . . . .	*	F. 48, { peritonitis . . . . .	7 days	F. 27, contraction of mitral valves—morbus cordis . . . . .	6 months
F. 19, { fever (continued) . . . . .	17 days	encysted ovarian tumour . . . . .	15 months	<i>Fever H.:</i>	
ulceration of the lower portion of ilium, and of the ascending colon (p. m.).		<i>Charing Cross H.:</i> —No deaths registered.		{ fever . . . . .	about 14 days
F. 45, granular degeneration of the kidneys—enlarged and hypertrophied heart—incipient cirrhosis of liver—dilated bronchi—ascites—anasarca—bronchitis (post mort.) . . . . .	*	<i>Middlesex H.:</i>		effusion into ventricle of brain—lymph at the base—lymph on the colon (post mort.) . . . . .	
		M. 19, pericarditis—pus in thorax and pericardium (post mort.) . . . . .		in hospital 6 days.	
		F. 62, cancer axilla . . . . .	3 years	<i>Small Pox H.:</i> —No deaths registered.	
		F. 36, diseased heart . . . . .	*	<i>King's College H.:</i> —No deaths registered.	

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued).

Bartholomew's H.:	duration	London H.:	duration	St. Thomas' H.:	duration
M. 27, typhus fever .....	*	M. 27, { typhus .....	18 days	F. 28, phthisis .....	about 12 weeks
M. 53, softening of the right corpus striatum, with extensive disease of the heart—contraction of the mitral valve, with ossification of the aorta .....	at some years	M. 56, abscess of kidney .....	*	F. 13, synchus—diarrhoea .....	probably 4 weeks
M. 19, encephalitis .....	*	M. 38, delirium tremens .....	3 days	M. 60, { fever .....	but could not give a clear account of his illness.
F. 56, apoplexy .....	*	F. 12, { dropsy after scarlatina .....	3 months	M. 60, { abscess of right parotid gland .....	8 days
F. 34, disease of the rectum and uterus .....	*	F. 12, { effusion on brain (post mort.) .....	12 hours	M. 60, { melanosis oculi .....	died of rupture of aorta, near the heart.
F. 7, general anasarca, with albuminous urine .....	*	Guy's H.:		Dreadnought H.:	duration
F. 20, phthisis .....	*	M. 40, morbus cordis .....	*	M. 12, { typhus .....	6 days
F. 18, insensibility—having had two fits—admitted in a state of unconsciousness.	*	M. 37, renal and cerebral disease .....	*	M. 12, { thickening and ulceration of Peyer's glands (post mort.) .....	
		F. 38, malignant uterus .....	*		

## DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, ETC.

Small Pox:	duration	Cholera:	duration	Intermittent Fever:	duration
F. 4, variola .....	3 days	M. 76, English cholera .....	7 days	F. 38, effusion on the brain, the effects of ague and debility .....	*
M. 10, { malignant small pox .....	1 week	At Thomas-street, Wyndham-road, Camberwell, daughter of a hawker, 1, infantile cholera (post mort.) .....	1 week	Remittent Fever:—	
M. 8 mon., { natural small pox .....	12 days	Typhus:—		F. 9 months, remittent fever .....	5 weeks
		M. 14, typhus fever .....	*	F. 1, remittent fever—acute hydrocephalus, several days	
Diarrhœa:—		M. 75, fever .....	a few days	Syphilis:—	
F. 74, diarrhœa .....	6 days	M. 7, { continued fever .....	9 days	No deaths registered from this cause.	
M. 56, { diarrhœa .....	2 weeks	M. 7, { ulceration of the intestines .....	6 hours	Hæmorrhage:—	
F. 1, bowel complaint .....	*	M. 4 mon., { typhus .....	8 days	M. 77, general decay— hæmorrhage from posterior nares .....	40 hours

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive but weak at every examination.	See General Remarks.	Cirrostratus, fleecy clouds, and scud covered the greater part of the sky throughout the day. Rain was falling at about 11h. a.m. and 2h. p.m.
MON.	Nothing was shown till 9h. a.m. Positive from that time till 5h. p.m., with tension occasionally very strong. Nothing was shown during the remainder of the day.	Foggy.	The sky was about one-third covered with cloud till 2h. a.m., when it became overcast, and continued so throughout the day.
TUES.	Positive with tension very strong from 5h. a.m. till 7h. p.m. Nothing was shown at any other times.	Thick fog.	Overcast and foggy throughout the day, except at about 3h. p.m., when it was cloudless for a short time.
WED.	Nothing was shown throughout the day, except from 3h. p.m. till 5h. 30m. p.m., when it was positive and very active.	Very dense fog.	The sky was overcast, and a dense fog prevailed during the whole of the day.
THURS.	Negative and tension strong from 11h. till 11h. 30m. a.m. Positive and tension generally strong during the remainder of the day.	Rain falling. See General Remarks.	Overcast throughout the day. The air was very damp, and there was an occasional fog. Rain was falling from noon till 2h. p.m.
FRID.	Positive with tension occasionally very strong till 3h. 30m. p.m. Nothing was shown during the remainder of the day.	See General Remarks.	Overcast till 1h. p.m., when the clouds gradually cleared off, and it remained cloudless till midnight.
SAT.	Nothing was shown throughout the day, except from 10h. p.m. to midnight, when it was positive and very active.	Dense fog. The air very calm.	Overcast and a dense fog throughout the day. The air has been unusually foggy throughout the week.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer is under comparison previously to being re-instated. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 42° 7'; and the mean reading at 7h. 30m. p.m., was 44° 9'; the mean readings at the Royal Observatory for the same times were 41° 5' and 43° 5' respectively.

† The air has been generally calm throughout the week.

*During the Week ending Saturday, November 7th, 1846.*

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 44.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 7th. The following selection of cases is made from the returns for the week ending Oct. 31st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

## CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
In Westminster Hospital, bricklayer, 46, injury to the spine by falling from a scaffold, when at work at a house in Pimlico	*	Baker, 29, rupture of the bladder, caused by an affray and fall—justifiable homicide—(post mort.)	*	M. 19, accidentally drowned whilst bathing in the River Thames.	*
In London Hospital, labourer, 59, accidental by a fall from a warehouse jetty—fracture of the skull	1 day	M. 57, { fractured thigh ..... 3 weeks (no inquest—how was fracture caused?)	9 or 10 years	F. 17, found drowned in the River Thames.	*
F. 13, a fall down stairs on the lower part of abdomen, followed by inflammation of the bowels (no inquest)	*	Wounds:—	*	M. newly born, found drowned in the River Thames.	*
M. 74, concussion of the brain from an accidental fall	suddenly	In London Hospital, skin dresser, 25, wilful murder against Ann Skinner, otherwise Nance Ruffie—stab in the chest with a carving knife (post mort.)	6 days	Hanging and Suffocation:—	*
In London Hospital, labourer, 64, accidentally crushed by the fall of a box of sugar on his body	*	Drowning:—	*	M. 63, suicide by hanging—insane from habitual intoxication	*
In King's College Hospital, son of a merchant, 3, injury to the left lung by fracture of four ribs—run over in Holles Street by a cart drawn by one horse, when being carried by a deaf boy, who ran against the horse (p.m.)	a few min.	Carpenter, 56, found dead in the waters of the River Thames, with a blow on his forehead as if from a fall—how caused unknown	*	F. domestic servant, 59, suffocation—cause unknown—being found dead	*
In London Hospital, commission broker, 65, accidental by a fall from a cart—fractured ribs	3 days	Single woman, 51, suicide by drowning herself in the River Thames, being in a state of mental aberration.	*	Burns and Scalds:—	*
M. 7, accidentally run over by a cart, drawn by one horse, across the head, and killed	instantly	M. 4, drowned by falling into the Surrey Canal accidentally—under water 1 hour.	*	F. 27, accidentally burnt by her clothes taking fire in a room (insane)	*
M. 78, { bruise of the foot ..... 1 month erysipelas ..... 7 days mortification ..... 2 days (no inquest—how was bruise caused?)		M. 38, drowned—no proof by what means—a slight cut over the right eye—under water some hours.	*	Shoemaker and maker of fireworks, 45, accidental death from fireworks exploding, causing mortal burns on his hands and face	3 weeks
		F. about 50, drowned herself in the Surrey Canal—but no proof as to the state of mind.	*	Daughter of a shoemaker, 3, accidental death by scalds from the fall of a pot of boiling water	7 days
		M. 16, accidentally drowned whilst bathing in the River Thames.	*	In London Hospital, daughter of a lamp-lighter, 1, accidental by scalds from boiling water from a saucepan	1 day
				In London Hospital, daughter of a labourer, 1, accidental from scalds on the chest	4 days
				Poison:—	*
				M. 80, paralysis and old age, accelerated by taking by mistake some soap liniment	*

## CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
In House of Correction, Westminster, M. 18, pulmonary consumption (post mort.)	8 weeks	F. 3, { hydrocephalus ..... 5 days suddenly comatose, and died in	5 days	F. 1, convulsions	*
In London Hospital, F. 57, sudden from apoplexy	*	M. 1, natural death—effusion into the cavity of chest	*	M. 35, inflammation of the brain, from natural causes	3 weeks
In London Hospital, M. 62, natural—sudden, from affection of the lungs	*	M. 4, sudden death from convulsions	*	M. 80, inflammation of the chest, and extravasation at the base of the brain	3 weeks
F. 59, disease, increased by want of proper food during three months, from her refusal to apply for relief at the Workhouse	*	F. 73, natural death—sudden, from apoplexy	*	F. 56, erysipelas of the head from natural causes	3 days
F. 3 mon., natural—not under medical treatment—had cold and cough for	2 days	M. 43, natural death, sudden, from diseased heart	*	The following is the Coroner's Return of the cause of death, in a case registered in the week ending 31st October.	
F. 40, found dead—delirium tremens from incessant intoxication with gin	7 months	M. 14 days, natural death—atrophied	from birth	Son of an engineer, 21 mon., hæmorrhage from the veins of the spermatic cord, after removal of diseased testicle—whether disease arose spontaneously, or from violence, no sufficient evidence (supposed by a blow from a nurse)	6 months
M. 40, natural—fell at work and died instantly—was subject to gout	*	M. 48, natural—apoplexy (3rd attack)	instantly		9 hours
F. 44, loss of blood from the lungs, after coughing (instant death).	*	M. 60, natural death—serous apoplexy	5 hours		
		M. 57, natural death—diseased heart, liver, and kidneys (post mort.)	*		
		F. 72, natural death—apoplexy	1 hour		
		F. 66, natural death—apoplexy and paralysis	9 hours		
		M. 63, suddenly, from natural causes—diseased heart	*		

## CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 72, natural—sudden, but precise cause not ascertained	*	M. 8 wks., found dead in bed, without marks of violence	*	M. 1, natural by the visitation of God	*
F. 69, natural—no medical attendance	*	M. 83, natural death, sudden, cause unknown	*	M. 16, natural death—sudden—cause unknown	*
F. 67, natural—not under medical treatment	*	F. 69, natural death—found dead without marks	*	F. newly born (about 6 months' gestation), found dead—no proof of vitality—no marks of violence.	*
M. newborn, found dead without marks	*				

## THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H.:—	duration	Middlesex H.:—	duration	Fever H.:—	duration
M. 31, phthisis pulmonalis—tubercles and vomica	*	M. 19, { inguinal hernia (strangulated) ..... 3 days operation	3 days	No deaths registered.	
old standing adhesions to both sides of the chest—slight ulceration of the larynx (p.m.)	*	F. 32, ulceration of the intestines—dysentery—phthisis	*	Small Pox H.:—	No deaths registered.
Westminster H.:—		F. 73, old age	*		
M. 9, tabes mesenterica	6 weeks	F. 21, erysipelas of head and face	*		
M. 27, tetanus	14 days	University College H.:—	duration		
M. 27, { trismus (post mort.) ..... 13 days trismus	13 days	M. 53, ascites—anasarca—morbus hepatis	*		
M. 21, pneumonitis	*	M. 55, calculus vesicæ—inflammation of bladder and testes—cancer of stomach—lithotitis	*		
Charing Cross H.:—	No deaths registered.				

NOTE.—A case which appeared in the returns from this hospital, for the week ending 17th Oct., was that of "a sugar-baker, aged 27, who had been vaccinated when young in Germany, and had five good cicatrices."

THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued).—

King's College H. :—		St. Bartholomew's H. (continued) :—		Guy's H. :—	
	duration		duration		duration
M. 60, plicurisy .....	14 days	M. 30, { granular kidneys .....	*	M. 24, consumption .....	5 weeks
M. 66, general decay .....	*	M. 30, { hydatids of the liver .....	*	M. 44, renal anasarca .....	*
M. 40, { morbus cordis .....	*	M. 30, { emphysema of the lungs .....	*	M. 29, phthisis .....	5 weeks
M. 72, dropsy .....	*	London H. :—		M. 51, renal dropsy .....	*
F. 38, { diabetes .....	3 months	M. 32, diseased bladder .....	*	M. 7, malignant disease of the eyes .....	*
F. 38, { pleurisy .....	6 days	M. 46, { scirrhus of the stomach and pancreas, 18 months		F. 42, laryngeal phthisis .....	*
F. 27, abscess of the kidney (post mort.) .....	*	M. 32, { ascites (post mort.) .....	4 weeks	F. 23, fever—ulcerated bowels .....	*
St. Bartholomew's H. :—		M. 35, { paralysis .....	15 days	F. 53, malignant disease of the stomach .....	*
M. 19, typhus fever with ulceration of the intestines—inflammation and consolidation of the lungs .....	*	M. 40, consumption .....	15 months	Dreadnought H. :—	
M. 18, paraplegia .....	*	M. 23, { erysipelas of the head and face .....	13 days	M. 27, { typhus .....	18 days
M. 34, delirium tremens .....	*	M. 23, { bronchitis .....	2 days	M. 27, { ulceration of the ilium and colon (post mort.) .....	*
M. 67, natural decay .....	*	F. 49, carcinoma of the uterus and rectum (post mort.) .....	13 months	M. 17, { typhus .....	9 days
M. 39, erysipelas of the face and head, with delirium tremens .....	*	St. Thomas' H. :—		M. 17, { ulceration of Peyer's glands, (post mort.) .....	14 days
F. 17, typhus fever with pneumonia of right lung, and ulceration of the bowels .....	*	F. 58, chronic enteritis .....	*	M. 16, { ulceration of Peyer's glands .....	24 hours
F. 52, { hernia .....	*	F. 15, phthisis .....	14 year	M. 16, { perforation of ilium, (post mort.) .....	50 days
F. 52, { operation .....	*	F. 33, icterus—ascites .....	1 year	M. 16, { erysipelas of face and head .....	32 days
F. 58, acute bronchitis .....	*	M. 23, typhus .....	25 days	M. 16, { consecutive abscesses .....	12 days
F. 55, diseased lungs .....	*	M. 5, cancerum oris .....	*	M. 16, { thickening of Peyer's glands, (post mort.) .....	17 days
F. 15, ulceration of the bowels .....	*	M. 47, scirrhus of pancreas—chronic ulcer of stomach .....	*	M. 20, { typhus .....	17 days
		M. 36, phthisis .....	2 months	M. 20, { ulceration of Peyer's glands (p.m.) .....	*

DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox :—		Typhus :—		Syphilis (continued) :—	
	duration		duration		duration
M. 21, variola (not stated whether vaccinated) .....	*	M. 76, continued fever .....	12 days	F. 7 mon, { syphilis (connate) .....	6 months
M. 9 months, small pox (not vaccinated) .....	*	F. 47, nervous fever .....	9 days	F. 7 mon, { lepra .....	3 months
M. 5 months, small pox (not vaccinated) .....	9 days	M. 32, typhus .....	10 days	Hæmorrhage :—	
F. 37, confluent small pox (not stated whether vaccinated) .....	15 days	F. 39, { typhus fever .....	14 days	M. 42, rupture of a blood vessel .....	*
M. 2, { small pox (1st attack) .....	12 days	F. 41, { ulceration of the bowels .....	11 days	F. 57, rupture of a blood vessel in the chest ..	*
M. 2, { pneumonia (not vaccinated) .....	4 days	M. 61, typhus fever—stricture of urethra ..	14 days	Malformation :—	
Diarrhœa :—		M. 23, fever .....	*	No deaths registered from this cause.	
M. 14 days, diarrhœa .....	*	F. 7, low fever—water in the brain .....	some months	Hernia :—	
F. 40, chronic diarrhœa, and consequent exhaustion .....	*	M. 12, { low fever .....	3 weeks	See Middlesex and St. Bartholomew's Hospital.	
F. 5 mon, diarrhœa .....	*	M. 12, { effusion on the brain .....	2 days	Diabetes :—	
F. 6 mon, { diarrhœa .....	9 weeks	M. 33, typhus fever .....	3 weeks	See King's College Hospital.	
F. 6 mon, { ulcerated intestines .....	4 weeks	F. 16, typhus fever .....	13 days	Stone :—	
M. 4 mon, diarrhœa—convulsions .....	4 days	F. 36, typhus fever .....	25 days	See Hospital Returns.	
F. 76, diarrhœa .....	48 hours	F. 23, nervous fever—effusion on the brain ..	14 days	Childbirth :—The time elapsing from commencement of labour to death should invariably be returned.	
M. 3 mon, diarrhœa .....	*	M. 17, { bilious diarrhœa .....	10 days	F. 24, { childbirth .....	9 days
F. 6 mon, diarrhœa with debility and emaciation .....	*	M. 9, fever .....	12 days	F. 24, { puerperal fever .....	5 days
F. 59, { diarrhœa .....	1 week	F. 63, { fever .....	2 days	F. 36, puerperal fever .....	14 days
F. 59, { paralysis of the bladder .....	3 months	F. 61, { ileus .....	7 weeks	F. 31, { childbirth .....	6 days
F. 22 days, diarrhœa .....	48 hours	M. 16, typhus fever .....	*	F. 35, puerperal peritonitis .....	6 days
F. 50, diarrhœa .....	*	F. 15, synocha, with gastric irritation .....	7 days	F. 43, puerperal hæmorrhage, inducing fatal syncope .....	*
F. 1, teething—diarrhœa .....	*	F. 5, typhus fever .....	3 weeks	F. 37, inflammation following parturition .....	4 days
M. 6 mon, bowel complaint .....	*	M. 14, typhus fever—ulcerated bowels .....	*	F. 39, peritonitis after parturition .....	2 weeks
F. 80, diarrhœa .....	*	M. 30, typhus fever .....	3 weeks	F. 34, { fever .....	2 days
M. 9 mon, diarrhœa .....	*	M. 18, typhus fever .....	2 weeks	F. 29, exhaustion after severe labour .....	6 days
M. 70, diarrhœa .....	*	M. 2, fever .....	2 weeks	F. 20, { puerperal peritonitis .....	3 days
M. 52, diarrhœa .....	4 days	F. 4, fever .....	2 weeks	F. 20, { diarrhœa .....	3 days
F. 3 mon, { diarrhœa .....	1 day	F. 7, fever—pneumonia .....	3 weeks	F. (age —), puerperal fever .....	2 weeks
M. 10 weeks, marasmus—diarrhœa .....	*	F. 10, typhus fever .....	3 days	birth .....	
F. 3 mon, diarrhœa—exhaustion .....	from birth	F. 69, malignant fever .....	3 days	F. 38, apoplexy during childbirth .....	10 days
M. 66, diarrhœa .....	3 months	M. 40, typhus fever .....	3 weeks	{ pregnancy .....	
M. 11 mon, { diarrhœa .....	5 days	F. 20, typhus fever .....	3 weeks	{ anasarca .....

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension strong at each examination.	} See General Remarks.	The sky was generally overcast till 11h. a.m.; mostly clear from that time till 4h. p.m., and about one-half covered with cirrostratus and fleecy clouds throughout the remainder of the day. A damp fog prevailed during the morning.
MON.			Cirrocumuli, cirrostrati, fleecy clouds, and scud generally covered about three parts of the sky throughout the day. A faint halo was visible around the moon at 8h. 20m. p.m. The magnets were disturbed in the evening.
TUES.			The greater part of the sky was covered with cirrostratus and scud till 6h. p.m., when it became cloudless, and continued so till midnight.
WED.			The sky was cloudless till 6h. a.m.; generally overcast from that time till 4h. p.m., and the clouds were very variable in amount during the remainder of the day. The prevailing clouds were cirrostrati, fleecy clouds, and scud.
THURS.	Positive and weak on November 2nd at 4h. and 8h. p.m.; on November 5th, from 3h. p.m. till midnight; and on 6th, at 4h. and 6h. p.m. Nothing was shewn at any other times throughout the week, except on Nov. 7, at 1h. p.m., when it was positive with moderate tension.		The sky was generally overcast throughout the day, except from 7h. to 10h. p.m., when it was about one-third covered with cirrostratus, scud, and a few cirri. Slight rain was falling from 5h. 45m. a.m. till noon.
FRID.			The sky was overcast throughout the day.
SAT.			The sky was overcast with cirrostratus and scud throughout the day. A thin misty rain fell for a short time at 9h. a.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer is under comparison previously to its being re-instated. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 47.3; and the mean reading at 7h. 30m. P.M., was 49.3; the mean readings at the Royal Observatory for the same times were 47.2 and 48.1 respectively.

† The mean direction of the wind for the week is S.S.E., but during a large portion of the week it has been nearly calm.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, November 14th, 1846.

ANNUAL SERIES VII.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. [No. 46.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 45.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 14th. The following selection of cases is made from the returns for the week ending Nov. 7th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning:—	duration
In St. George's Hospital, house painter, 42, diffuse cellular inflammation of the leg and arm .....	*	In St. Thomas's Hospital, traveller, 27, fracture of his right leg and knee-joint by waggon wheels passing over him, as he fell in picking up a parcel in King William Street ..	3 days	Son of a labourer, 18, drowned by the tarpauling of a barge, which was carried away by the wind, knocking him off the deck into the River Thames—under water $\frac{3}{4}$ of an hour.	
In St. Bartholomew's Hospital, salesman at a clothes-shop, 33, fracture of his skull, caused by falling from a ladder on to an iron fender, whilst hanging up clothes at Exmouth Street, Clerkenwell. ....	$\frac{1}{2}$ hour	In St. Thomas's Hospital, carpenter, 68, inflammation of the lungs, caused by fractured ribs from a fall between the kerb and a cart-wheel on London Bridge (post mort.)	6 days	Coal porter, 45, drowning—fell off a barge, which struck a pier of Battersea Bridge—(not sober).	
In St. Bartholomew's Hospital, widow upwards of 80, effects of a fracture of her left thigh, from being accidentally pushed down in Old Street. ....	10 days	Tailor, 81, injuries of the chest from being accidentally run over by a chaise .....	2 days	Labourer, 26, drowned while bathing, after intoxication.	
In Guy's Hospital, millwright, 75, fractured ribs and injury to his chest, by a fall from a ladder at the Cornwall Road .....	20 hours	In Guy's Hospital, railway carriage cleaner, about 40, fractured ribs and other injuries to his body, from being jammed between the buffers of two railway carriages, at London Bridge station .....	6 hours	Shoemaker, 62, evidence of drowning found in the chest, and of complete apoplexy in the head—threw himself in, whether to bathe or destroy life not known.	
In Guy's Hospital, bricklayer, 26, fracture of his skull by a fall, from a scaffold giving way at Sydenham Park .....	6 weeks	In Guy's Hospital, signal-man on a railway, about 39, wound of the abdomen, with the viscera protruding—being struck by a railway train in motion, on the atmospheric line, between Sydenham and the Dartmouth Arms stations .....	nearly 1 hour	F. (occasional servant), 17, drowned herself while in a distracted state of mind, from the fear of what might be her treatment in the shed attached to the Workhouse.	
In Guy's Hospital, widow, 72, effects of a fracture of her right arm, from a fall caused by a swimming in her head (at Kingsland) ..	6 weeks	In Middlesex Hospital, M. 56, comminuted fracture of thigh (no inquest) .....	*	<b>Burns and Scalds:—</b>	
F. 45, immediate death by an accidental fall and breaking of a dish, which caused a mortal wound in the throat .....	*	(an imperfect return)		In Guy's Hospital, son of a policeman, 6, burnt by his nightgown taking fire, as he was taking a kettle off the fire (at Waudsworth Road). ....	4 days
Sea apprentice, 15, accidental death by a fall from a yard-arm of a ship on the deck, causing fractured skull .....	*	<b>Wounds:—</b>		In St. Thomas's Hospital, son of a labourer, 2, burnt by his frock taking fire, as he was standing on a fender (at New Park Street) 24 hours	
M. 33, concussion of the brain by accidentally falling off a lead flap in a fit of delirium, resulting from intemperance .....	*	M. 33, temporary insanity—shattered skull—shot himself with his fusée—died .....	instantly	In St. Bartholomew's Hospital, journeyman dyer, 33, scalded by falling into a copper of boiling logwood, as he was reaching across it (at Milton Street, Cripplegate) .....	12 hours
In St. Thomas's Hospital, son of a carpenter, 15, fractured skull from being run over by an omnibus, as he was crossing Wellington Street, London Bridge (post mort.) ..	a few minutes	In Bartholomew's Hospital, saddle and harness maker, 54, disease of the chest, accelerated by cutting his throat with a razor, at Plough Court, Holborn (in temporary insanity) .....	10 days	<b>Poison:—</b>	

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
In St. Bartholomew's Hospital, F. 69, inflammation of the membranes of the brain—natural (post mort.) .....	7 days	M. 41, { natural—had erysipelas of the side—then in the leg .....	during a fortnight	{ fever .....	6 days
In Guy's Hospital, M. about 28, congestive apoplexy, brought on by intemperance—(post mort.) .....	*	M. 41, natural disease of the lungs—probably phthisis—died suddenly .....	*	M. 34, { delirium .....	6 days
M. under 1, { pneumonia .....	2 weeks	M. 26, natural death—sudden—from diseased heart .....	*	coma .....	12 hours
(not under medical treatment (post mort.))		F. 56, natural death—probably from diseased heart—died instantly .....	*	had been subject to epilepsy and occasional insanity .....	for many years
F. 16 wks., natural—was teething and latterly convulsed—not under medical treatment ..	*	The following cases of Convicts at Woolwich are returned by the Coroner; but in each, with the exception of the last, the statement of the cause of death is copied from the Certificate of Mr. Bossey, Surgeon to the Unité Convict Hospital Ship.		M. 71, { asthma .....	7 days
F. 59, { peritonitis .....	4 days	M. 75, { jaundice .....	26 days	pneumonia .....	1 day
F. 15, exhaustion from sloughing at the lower part of the back, from lying on a bed-pan at the Margate Royal Sea Bathing Infirmary—negligence proved against the nurse, lived 12 days		M. 75, { fever .....	*	bronchitis .....	22 days
				diarrhoea .....	14 days
				angular curvature of spine .....	8 months
				followed by paralysis of bladder and lower extremities .....	3 months
				delirium, followed by coma .....	1 week
				M. 23, phthisis pulmonalis .....	5 months
				M. 25, { phthisis .....	8 months
				valvular disease of the heart .....	*
				M. 55, { fever .....	6 weeks
				inflammation of chest and intestines ..	

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. 63, natural causes—died suddenly—no marks of violence .....	*	M. 72, natural—not previously ill—fell suddenly at a table, and died in a minute.		F. 6 wks., found dead, without any marks of violence .....	*
		M. 3 mon., found dead in bed—no marks of violence.		M. 59, suddenly, from natural causes .....	*

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

For Unité Convict Ship see Hospital Returns.

St. George's H.:		duration	University College H. (continued):		duration	London H. (continued):		duration
M. 48,	phthisis pulmonalis	*	F. 47, jaundice—cirrhosis of liver	*		F. 69, hernia	*	
	vomica—hepatization—partial emphysema.	*	F. 56, morbus hepatis	*		F. 17, rheumatism	*	
	fatty degeneration of the kidneys	*	F. 40, phthisis pulmonalis	*		Guy's H.:		
	anasarca—incipient cirrhosis of liver	*	F. 39, phthisis pulmonalis	*		M. 36, dropsy—malignant disease	*

M. 4,	{ diarrhœa	14 days		{ diarrhœa	14 days	F. 40,	bronchitis, pneumonia, diarrhœa post partum	*
	{ meningitis	14 days	F. 2,	fever	3 weeks	F. 36,	intermittent fever occurring during the puerperal state	8 weeks
F. 66,	exhaustion, accompanied with severe bilious attack	4 days	M. 9,	febris adynamica	5 weeks	F. 30,	puerperal fever	5 days
F. 5,	diarrhœa—debility	*	F. 8,	typhus fever	14 days	See Charing Cross Hospital.		
See above.			F. 26,	{ typhus fever	3 weeks	ERRATUM in the list of last week:—Omit eleventh case of childbirth, and insert the following:—		
Dysentery:			M. 77,	{ insanity	10 years	F. 34,	peritoneal inflammation, following childbirth	*
F. 78,	dysentery and consequent debility, about 9 weeks			{ fever	1 week	Delirium tremens:—		
Cholera:			M. 8 mon.,	fever	*	M. 33,	delirium tremens	4 days
No deaths registered from this cause.			M. 67,	typhus fever	*	M. 44,	delirium tremens	4 days
Other cases of diarrhœa not assigned to this head in abstract:—			M. 4,	{ typhus fever	14 days	See Hospital Returns.		
F. 36,	{ phthisis	1 year		{ convulsions	8 hours	Intemperance:—		
	{ hæmoptysis 6 months ago.		M. 5,	typhus fever—gaugenuous erosion of the face	14 days	F. 43,	{ general constitutional disorder from	*
F. 39,	{ diarrhœa	1 week	F. 2,	debility from fever	14 days		{ intemperance	5 years
	{ disease of uterus	ill for years	F. 39,	synochus	21 days	M. 59,	{ dropsy	3 months
	{ diarrhœa since last confinement	6 years ago	F. 17,	typhus fever	2 weeks		{ decay of nature from drinking	70 days
M. 41,	lumbar abscess—diarrhœa	*	M. 5,	{ typhus fever	3 weeks	See Coroners' Returns.		
F. 2,	{ tabes mesenterica	9 months		{ bronchitis	6 days	Privation:—		
	{ diarrhœa	*	See Hospitals.			F. 70,	{ epileptic fits	several years
F. 39,	{ phthisis	11 months	Remittent Fever:—				{ congestion of the brain from exposure to cold and damp	a few hours
	{ diarrhœa	7 days	M. 2,	remittent fever from dentition	1 month	See Coroners' Returns.—See also below. The present list contains 3 cases of death produced by wet.		
F. 6 mon.,	{ hronchitis	3 weeks	Intermittent Fever:—			Miscellaneous Causes:—		
	{ diarrhœa	2 days	M. 75,	{ hronchitis	40 years	M. 44,	cirrhosis—congestion of the lungs on both sides (post mort.)	*
F. 11 weeks,	{ erysipelas	3 weeks		{ intermittent fever	2 months	F. 68,	tuberculated liver	*
	{ diarrhœa	2 days	Syphilis:—			F. 1,	cachexia—enormous bulle, apparently of pemphigus bulle	1 week
F. 9 mon.,	{ hooping cough	4 weeks	F. 37,	syphilis	*		{ tetanus in form of trismus and opisthotonos, produced by getting wet	ill for 3 or 4 weeks
	{ diarrhœa	4 days	F. 11 weeks,	{ syphilis	6 weeks	M. 38,	{ left off work only on Tuesday last.	*
	{ convulsions	4 hours		{ convulsions	1 hour	Three male children of one mother died of "debility," aged respectively 7 days, 10 days, and 11 days.		
Typhus:—			M. 6 weeks,	{ eruption of secondary syphilis	10 days			
M. 53,	continued fever	2 months		{ convulsions	3 days			
M. 8 mon.,	nervous fever	8 days	F. 6 weeks,	syphilis—convulsions	*			
M. 2,	fever	10 days	Hæmorrhage:—					
M. 6,	malignant typhus	2 weeks	F. 21,	supposed internal hæmorrhage	*			
M. 42,	gastric fever	3 weeks	Malformation:—					
M. 16,	fever—congestion of heart and lungs	12 days	M. 6 weeks,	imperforate anus.	*			
M. 6,	low fever and congestion of the lungs	25 days	F. 5 mon.,	spina bifida.	*			
F. 54,	typhus, after the debilitating effects of repeated attacks of acute rheumatism	3 weeks	M. 6 days,	cyauosis.	*			
M. 59,	continued fever	3 weeks	F. 13 weeks,	spina bifida.	*			
RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.								
M. 21,		duration	M. 78,		duration	M. 10 wks,		duration
	{ pericarditis	4 weeks	M. 33,	chronic hronchitis—hydrothorax	*		{ hydrocephalus acutus	6 weeks
	{ congestion of lungs.	*	M. 57,	softening of the brain	*		{ effusion to 3 oz.	*
	{ low peritonitis	1 week	F. 6,	hydrocephalus	14 days		{ abscess in the 4th ventricle.	*
F. 46,	{ ascites	6 months	F. 31,	softening of the brain	*	M. 35,	sudden from apoplexy	*
	{ degeneration of both ovaries into a lump of hydatids, filling the pelvis and inferior portion of the abdomen.		F. 3 mon.,	convulsions—marasmus.	*	F. 26,	peritonitis	5 days
	{ uterus atrophied.		M. 44,	{ Bright's disease of the kidney	3 to 4 years		{ scirrhus stricture of the sigmoid	*
F. 26,	{ erysipelas	11 days		{ meningitis	*	F. 31,	{ flexure of the colon	12 days
	{ congestion of the lungs.			{ effusion	14 days	M. 35,	{ granular disease of the kidney	3 years
M. 46,	cancer of the bladder	5 or 6 years	M. 1,	acute hydrocephalus	15 days		{ pericarditis	6 days
M. 66,	{ chronic bronchitis	9 months	M. 8 mon.,	{ pertussis	3 months	M. 61,	apoplexy	*
	{ hydrothorax	*		{ bronchitis	14 days	M. 48,	general paralysis	*
			M. 54,	disease of the liver and kidneys	several years			

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, 14th November, 1846.

Day.	Phases of the	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			The sky was overcast with cirrostratus and scud throughout the week.
MON.			Overcast till 6h. 35m. p.m.; from this time till 10h. 50m. p.m. the sky was generally cloudless. Vapour, however, was occasionally prevalent between these times. The sky became overcast at 11h. p.m.
TUES.			Cirrostratus and drk scud were prevalent till 3h. a.m., but before 5h. a.m. the sky became cloudless, and remained so till 6h. 45m. a.m. At 7h. 30m. a.m. the sky was nearly overcast, but before 9h. a.m. it was cloudless, and remained so with slight exceptions till 2h. p.m. In the afternoon and evening the sky was generally overcast. (The amount of cloud was variable.)
WED.	No electricity was shewn throughout the week, except on November 10th, between 1h. p.m. and 2h. p.m.: between these times it was positive and weak.		Generally overcast with cirrostratus and scud till 9h. a.m.; from that time till 2h. p.m. the amount of cloud was small, and the sky became quite clear at 3h. p.m. During the remainder of the day it was cloudless. Several faint meteors were seen in the evening.
THURS.			Cloudless till 5h. a.m., when a light scud came up from the east, and soon afterward covered the sky. It continued overcast during the remainder of the day.
FRID.			Overcast with cirrostratus and scud throughout the day.
SAT.			The clouds were slightly broken at 3h. p.m.; with that exception the sky was covered with cirrostratus and scud throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The solar radiator has been under repair during the greater part of the week.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been under comparison previously to its being re-instated. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 44.3; and the mean reading at 7h. 30m. p.m., was 44.9; the mean readings at the Royal Observatory for the same times were 42.9 and 43.8 respectively.

† The mean direction of the wind for the week is E.N.E.

A TABLE OF  
Births and Deaths registered in the Metropolis,  
During the Week ending Saturday, November 21st, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 47.]

Causes of Death	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 46.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 21st. The following selection of cases is made from the returns for the week ending Nov. 14th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Drowning (continued):—	duration	Hanging and Suffocation (continued):—	duration
M. 34, injuries of the head from falling 90 feet—slipped his grasp in turning to pass an upright beam, on a narrow scaffold platform	*	Son of a labourer, 4, drowned by falling into the River Thames accidentally—under water 15 minutes.		Labourer, 22, accidentally suffocated by the falling of earth, in a place forming for a drain (at Britannia Row, Hoxton).	
M. 48, mortal concussion and injuries to the head, by falling against a fender or fire-shovel when intoxicated, accidentally	about 24 hours	Apprentice-seaman, 16, drowned by accidentally falling out of a ship's boat into the River Thames—under water 5 hours.		Burns and Scalds:—	
Chair-turner, 68, fracture of the thigh, resulting from a fall in the street, accidentally	6 weeks	F. 25, drowned by the accidental upsetting of a skiff on the River Thames (under water 4 days).		M. 8 mon., burns received by the bedding and furniture accidentally taking fire—he being laid thereon to sleep.	
Daughter of a chimney sweep, 6, fracture of the skull—knocked down, and head crushed by the wheel of a cart, drawn by one horse, when playing on the foot pavement, near the edge of the kerb (in Perkin's Rents)	a few min.	Hanging and Suffocation:—		M. 1, scalds on the chest, &c., by partly upsetting a shaving pot, containing boiling water, accidentally	*
Wounds:—		M. 83, hanged himself in a temporary state of insanity.		Poison:—	
Carpenter, 41, cut his throat with a razor (in temporary insanity)	about 7 hours	M. 58, suicide by hanging—delirium tremens, resulting from habits of intemperance	*	M. 26, apoplexy from poisoning with laudanum, taken by him while insane—not known whether suicidally, or as a medicine	*
Drowning:—		Labourer, 20, suicide by hanging himself, being of unsound mind.		M. 7 wks., died from a quantity of opium having been accidentally administered	10 hours
M. 10, accidentally drowned from a boat in the River Thames, at Ratcliffe.		Daughter of a grocer, 9 wks., suffocated accidentally by turning on her face, when laid to sleep.		Bathing:—	
Son of a stoker in a steamboat, 8 months, drowned by accidentally falling off a bed, into a tub containing about 3 quarts of water—in the water 10 minutes.		Daughter of a single woman, 5 mon., accidentally suffocated under the bed clothes.		M. 69, natural exhaustion, resulting from going into a bath to bathe	*
		Labourer, 35, accidentally suffocated by the falling of earth, in a place forming for a drain (at Britannia Row, Hoxton).		Means not stated:—	
				M. 26, manslaughter	*
				(an imperfect return—by what means was death caused?)	

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

In Westminster Hospital, M. 72, apoplexy—blood extravasated on the surface of the brain (post mort.)	duration	F. 52, apoplexy, cerebral, (3rd attack)	duration	F. 2, natural death from supposed croup	duration
M. 38, apoplexy from disease of the heart (instant).	8 hours	F. 3 mon., effusion into the brain—natural	*	M. 72, natural death of a fit—had two previous apoplectic attacks	*
M. 17, peritonitis from perforation of bowel by an ulcer (post mort.)	14 days	F. 72, voluntary starvation from miserly inclination	*	M. 32, natural death from disease of the heart—died instantly.	*
M. 19, fever, with inflammation of the lungs—(post mort.)	14 days	M. 50, natural death from disease of the heart	*	F. 6 mon., bronchitis—died suddenly	*
M. 1 mon., natural—snapped from convulsions—found dead in bed	*	M. 20, { diseased lungs and heart ..... some years causing effusion of serum and blood on the brain (post mort.)	*	F. 45, natural death—apoplexy	*
M. 79, natural death—sudden—from apoplexy.	*	M. 2, natural death—inflammation of the chest from hooping cough	*	F. 2, natural death from scrofula	*
M. 17, natural death—sudden—from rupture of a blood vessel (verdict), in the chest, and internal bleeding (statement of Registrar)	*	F. 10 wks., { diarrhœa ..... 3 days convulsions	*	M. 1, natural death from a fit—subject thereto—instant	*
		F. 9, natural—sudden—from an affection of the head	*	F. 27 days, natural death—debility from want of breastmilk	*
		M. 56, natural death—sudden—from apoplexy	*	F. 57, natural death—scroop apoplexy	*
		F. 57, natural death—cancer of uterus (p. m.)	*	M. 10, natural death from a fit	8½ hours
				M. 44, natural death—asthma	*

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

F. 6 wks., found dead—natural—no previous illness	duration	F. 74, found dead in bed, without marks of violence	duration	F. 40, natural death—sudden—precise cause not ascertained	duration
F. 86, found dead in bed, apparently from natural causes, but very sudden.	*		*		*

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H.:—	duration	Charing Cross H.:—No deaths registered.	duration	King's College H.:—	duration
M. 48, phthisis pulmonalis—tubercular deposits in the peritoneum with ascites—acute pericarditis (post mort.)	*	Middlesex H.:—		M. 44, { consumption ..... 1 year laryngitis ..... 2 months	
F. 53, apoplexy	*	F. 63, anasarca—bronchitis—emphysema	*	M. 40, { cirrhosis ..... 7 years dropsy ..... 5 weeks	
Westminster H.:—		University College H.:—No deaths registered.		F. 36, { phthisis ..... 5 months diarrhœa ..... 6 weeks	
See Coroner's Returns.		Fever H.:—No deaths registered.			
		Small Pox H.:—No deaths registered.			

THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued).—

<i>St. Bartholomew's H.:</i>	<i>duration</i>	<i>London H. (continued):—</i>	<i>duration</i>	<i>Guy's H.:</i>	<i>duration</i>
M. 16, abscess in the iliac fossa .....	*	M. 39, diseased liver.....	16 months	M. 47, aneurism of the descending aorta ....	*
M. 10, disease of the heart .....	*	F. 57, hernia .....	*	M. 23, malignant disease of liver and abdominal glands.....	*
F. 57, peritonitis after tapping for dropsy, from disease of liver and kidney ....	<i>ill more than a year</i>	F. 33, sloughing of the nates .....	*	M. 34, phthisis .....	*
F. 56, cancer of the rectum .....	*	<i>St. Thomas' H.:</i>		M. 37, hydrothorax from enlarged glands ....	*
F. 19, erysipelas of the head and face.....	*	F. 76, enteritis .....	7 months	F. 28, malignant disease of the pharynx and larynx .....	*
<i>London H.:</i>		F. 40, typhus (duration could not be ascertained—moribund when brought to the hospital) ..	*	<i>Dreadnought H.:</i> —No deaths registered.	
M. 3, { lumbar abscess.....	7 months	M. 42, bronchitis—valvular disease.....	5 months		
	4 months				

DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

<p><i>Small Pox, &amp;c.:</i></p> <p>F. 2, { variola .....</p>	7 days
F. 18 mon., variola—never vaccinated.....	*
M. 10 mon., chicken pox .....	6 weeks
<i>Diarrhœa:</i>	
F. 11 days, diarrhœa .....	from birth
M. 2 weeks, diarrhœa—convulsions.....	*
M. 3, convulsions with diarrhœa.....	27 hours
M. 2 mon., diarrhœa and inanition from want of breast milk .....	*
F. 10 weeks, diarrhœa—aphtha .....	5 days
F. 84, age and decay—diarrhœa .....	5 days
F. 33, diarrhœa .....	11 days
F. 10 weeks, diarrhœa .....	3 weeks
F. 6 weeks, diarrhœa .....	11 months
F. 37, { ulceration of small intestines.....	11 months
	{ with diarrhœa (post mort.)
M. 1, diarrhœa .....	6 days
F. 62, constipation—diarrhœa .....	*
M. 6 mon., diarrhœa .....	*
M. 2, diarrhœa from inflammation and ulceration of the mucous membrane of the bowels .....	2 months
<i>See Coroners' Returns.</i>	
<i>Dysentery:</i>	
F. 70, dysentery and inflammation of bowels.....	*
F. 52, { dysentery .....	3 months
	{ ulceration of the bowels.
F. 36, mania and dysentery .....	7 weeks
M. 8 weeks, dysentery .....	1 week
M. 1, dysentery .....	7 days
<i>Cholera:</i>	
In Camelia-place, Regent-street, son of a porter, 4, cholera—effusion on the brain ..	14 days
<i>Other cases of diarrhœa not assigned to this head in abstract:</i>	
M. 48, { phthisis pulmonalis .....	2 years
	{ diarrhœa .....
F. 89, { bronchitis .....	3 months
	{ diarrhœa .....
M. 66, phthisis—diarrhœa .....	some years
F. 5, { hooping cough .....	1 week
	{ diarrhœa .....
M. 62, { paralysis .....	7 weeks
	{ diarrhœa .....
M. 28, { caries femoris .....	4 days
	{ diarrhœa .....
M. 49, { paralysis .....	14 days
	{ diarrhœa .....
<i>Typhus:</i>	
F. 24, typhus fever.....	15 years
F. 42, typhus fever.....	10 days
F. 48, fever .....	14 days
M. 7, typhus fever.....	4 weeks
M. 29, inflammatory fever .....	14 days
F. 10, { synochus .....	14 days
	{ enteritis .....
M. 48, typhus fever .....	14 days
F. 7, typhus fever .....	14 days
F. 24, { low fever .....	7 days
	{ inflammation of liver .....
F. 3, malignant typhus .....	3 days
M. 62, fever .....	*
M. 6, { gastric fever .....	3 weeks
	{ convulsions .....
F. 4, typhus fever .....	7 days
M. 19, continued fever with ulceration of the bowels .....	22 days
M. 22, typhus fever .....	2 months
<i>Typhus (continued):—</i>	<i>duration</i>
M. 61, continued fever—ulceration of Peyer's glands .....	12 days
F. 51, chronic bronchitis—typhus fever .....	*
F. 61, fever .....	1 month
F. 5, typhus fever .....	16 days
F. 6 weeks, { fever.....	8 hours
	{ convulsions.....
M. 20, { fever .....	6 days
	{ hepatitis .....
F. 20, bilious fever.....	4 days
F. 36, low fever .....	1 week
F. 18, { typhus gravior .....	6 days
	{ exhaustion.....
M. 12, typhus fever—diarrhœa .....	*
F. 18, fever .....	14 days
F. 7, typhus fever .....	14 days
M. 43, fever—epilepsy .....	5 weeks
M. 40, fever .....	14 days
M. 6, typhus fever.....	14 days
F. 36, typhus mitior .....	14 days
F. 78, febris—aphtha.....	3 weeks
F. 23, { fever .....	3 weeks
	{ bronchitis .....
M. 3, typhus fever.....	14 days
F. 17, febris—diarrhœa from ulceration of the bowels .....	9 days
F. 32, typhus gravior.....	1 week
M. 47, { typhus fever .....	3 days
	{ congestion of the lungs.....
F. 1, dentition—typhus.....	3 weeks
F. 23, { pleuritis .....	7 days
	{ fever .....
M. 12, fever—effusion into the brain .....	14 days
M. 16, typhus fever .....	28 days
F. 8, { continued fever .....	10 days
	{ with pneumonia .....
F. 17 days, fever .....	1 month
M. 4, { typhus fever .....	7 days
	{ swelling of the glands.....
F. 6, typhus .....	6 weeks
M. 39, typhus fever.....	3 days
F. 61, fever—gastritis .....	
<i>See St. Thomas' Hospital.</i>	
<i>Syphilis:</i>	
F. 25, syphilis.....	1 year
F. 55, syphilis.....	*
<i>Hæmorrhage:</i>	
F. 51, hæmorrhage.....	*
<i>See Coroners' Returns.</i>	
<i>Malformation:</i>	
F. 4 hour, cyanosis.....	*
M. 17 days, { malformation of the chest.....	from birth
	{ debility .....
M. 1 day, cyanosis.....	
<i>Hernia:</i>	
F. 9 mo. { umbilical hernia .....	from birth
	{ mortification.....
M. 45, hernia .....	6 months
M. 48, { anasarca .....	3 months
	{ icterus .....
	{ umbilical hernia.....
<i>See London Hospital.</i>	
<i>Diabetes:</i>	
<i>No deaths registered from this cause.</i>	
<i>Stone:</i>	
M. 68, { diseased bladder.....	1 year
	{ operation for stone.....
M. 74, stone in the bladder .....	many years
<i>Tabes mesenterica and calculi:</i>	<i>duration</i>
F. 32, { tabes mesenterica.....	8 years
	{ mesenteric glands greatly enlarged—calculi in gall-bladder and kidney (post mort.)
<i>Childbirth:</i> —The time elapsing from commencement of labour to death should invariably be returned.	
	{ paralysis .....
F. 42, { delivered of a very fine child on the 8th ult.—seized with dyspepsia on 9th November, which increased continually till death.	4 years
<i>NOTE.</i> —Time between delivery and death, or duration of illness, should be shewn not by dates, but by number of days, hours, &c., intervening.	
F. 37, puerperal fever .....	24 days
F. 21, { puerperal fever .....	5 months
	{ cerebral congestion .....
F. 37, exhaustion from miscarriage .....	3 days
F. 33, { delivery .....	14 hours
	{ peritonitis (post mort.) .....
F. 30, childbirth .....	
<i>The Registrar was informed that deceased had been examined, and that extensive ulceration of the uterus was found.</i>	
F. 18, { childbirth .....	11 days
	{ pleuritis .....
F. 38, { peritonitis.....	9 days
	{ abortion .....
F. 31, { fever .....	3 weeks
	{ puerperal fever .....
F. 17, { puerperal peritonitis .....	8 days
	{ fever .....
F. 36, { childbirth .....	6 days
	{ puerperal fever .....
F. 20, { bronchitis .....	6 days
	{ pneumonia during childbirth.....
F. 29, hæmorrhage after labour .....	4 days
F. 38, hæmorrhage after parturition .....	15 hours
F. 28, puerperal fever .....	3 hours
F. 26, { rheumatic carditis (3rd attack)—disease of aortic valves .....	4 days
	{ died from exhaustion after childbirth—(post mort.) .....
	{ assigned to rheumatism in abstract)
<i>Delirium tremens:</i>	
M. 23, delirium tremens—effusion on the brain ..	12 hours
M. 44, delirium tremens .....	
M. 36, delirium tremens .....	7 days
<i>Intemperance:</i>	
M. 50, { typhoid fever .....	13 days
	{ chronic bronchitis—dyspepsia of long standing, the result of hard drinking ..
M. 32, { ebrietas .....	*
	{ delirium tremens .....
	{ phthisis .....
F. 56, { vomica.....	11 weeks
	{ disease of the lungs and brain from drinking .....
	{ mania .....
<i>Privation:</i>	
<i>See Coroners' Returns.</i>	
<i>Fright:</i>	
F. 4, sudden fright—congestion of the brain.....	3 weeks

RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

<p>M. 39, { jaundice .....</p>	10 days
	{ gallstones.....
F. 75, perforation of the duodenum .....	4 months
F. 16, hepatitis tuberosus .....	2 years
M. 70, rheumatism—hypertrophy of the heart, with valvular disease .....	8 days
F. 4, hydrocephalus .....	2 months
F. 30, peritonitis .....	5 weeks
M. 50, insane—effusion on the ventricles of the brain, with congestion of that organ—organic affection of the brain .....	10 months
F. 10 wks., passive effusion on the brain .....	6 months
M. 70, asthma—empyema .....	*
M. 55, hydrothorax—granulated liver and kidneys .....	6 months
F. 48, cancer (scirrhous) of pylorus.....	2 years
M. 12, pncumonia .....	3 years
M. 45, aneurism of the aorta .....	4 years
F. 57, hypertrophy of the heart .....	2 years
F. 14, { rheumatic endocarditis .....	40 hours
	{ thickening of the valves, and serum in the pericardium.....
F. 54, apoplexy .....	9 days
M. 67, angina pectoris—no disease of heart ..	5 years
F. 59, granular kidney—abdominal dropsy ..	2 years
M. 28, { apoplexia.....	3 years
	{ paralysis of the right side—clot of the size of a hen's egg in the middle lobe of the left hemisphere.....
M. 46, { scrofula .....	5 years
	{ of the neck and testicle.....
M. 75, caries of 5th and 7th right ribs—purulent infiltration into the cavity of the right pleura .....	2 years
	{ diarrhœa .....
	{ phthisis .....
	{ atrophy and hypertrophied state of former—atheromatous and bony deposit in latter.....
F. 43, ovarian disease, bursting on the right side into the rectum, on left side into colon ..	2 years
M. 23, { tubercles in the lungs .....	several years
	{ pleuro-pncumonia .....
	{ otitis.....
	{ meningitis.....
M. 8, { ulceration of dura mater.....	3 years
	{ effusion of pus on the surface of the brain.....
F. 35, { hypertrophy of left ventricle of the heart, with diseased mitral valve ..	2 years
	{ hepatization of right lung.....
M. 56, diseased heart .....	*
F. 14, { phthisis—upper lobe of both lungs ..	8 months
	{ ulceration of the colon.....
M. 49, disease of heart, aorta, and coronary artery .....	*
F. 43, ovarian disease, bursting on the right side into the rectum, on left side into colon ..	2 years
M. 23, { tubercles in the lungs .....	several years
	{ pleuro-pncumonia .....

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, 21st November, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, corrected to 32 degrees Fahrenheit.	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature				Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			The sky was covered with cirrostratus, fleecy clouds, and scud till 9h. p.m. After that time the amount of cloud considerably diminished, but the evening was generally overcast.
MON.			Generally overcast with cirrostratus and dense scud till noon. Shortly after that time the clouds became broken, and cumuli, cirrostrati, and scud were distributed till 3h. 30m. p.m. During the remainder of the day the sky was overcast with cirrostratus.
TUES.	Positive and weak on November 16th at 11h. a.m.; on November 17th, at 11h. a.m.; and on Nov. 18th, at 1h. p.m.		With the exception of a short time about 9h. a.m., when the clouds were slightly broken, the sky was overcast with cirrostratus and scud throughout the day. Frequent showers of rain occurred in the evening.
WED.			Overcast with cirrostratus till 6h. a.m. During the remainder of the day, cumuli, cirrostrati, and fleecy clouds were distributed in small proportions. Overcast from 11h. p.m.
THURS.			Generally overcast with cirrostratus and flying masses of scud till 6h. a.m. Rain was falling frequently till this time. Cirri, cirrostrati, and detached portions of scud were distributed during the remainder of the day.
FRI.	Negative and active on Nov. 21, from 6h. 50m. p.m. to 9h. 50m. p.m. Frequent sparks emitted. No galvanic current was shewn. Squalls of wind and rain frequently occurred between these times.		Three-fourths of the sky were generally covered with cirrostrati and fragments of scud till 6h. a.m., when it became overcast, and remained so with slight exceptions till 6h. p.m. At 1h. p.m. the sky became cloudless, and remained so till midnight. The wind was blowing in gusts varying from 5lbs. to 8lbs. on the square foot from 6h. a.m. to 6h. p.m. The greatest pressure occurred at 3h. 30m. p.m. The barometer reading decreased 0.453 in. from 1h. a.m. to 2h. 15m. p.m. The minimum occurred at 2h. 35m. p.m., being 29.169 in.
SAT.			Cloudless till 5h. 30m. a.m., shortly after which time the sky became overcast, and remained so generally till 3h. p.m. Cloudless from 3h. p.m. till 6h. p.m., when it became overcast. Rain was falling heavily from 6h. 30m. p.m. till 10h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The solar radiating thermometer was out of order during part of the week.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer was replaced on Monday. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 46.8; and the mean reading at 7h. 30m. P.M., was 48.3; the mean readings at the Royal Observatory for the same times were 46.1 and 47.0 respectively.

† The mean direction of the wind for the week is S.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, November 28th, 1846.*

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 48.]

Causes of Death	Age			Total	Weekly Average derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 47.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 28th. The following selection of cases is made from the returns for the week ending Nov. 21st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns (continued):—	duration
Son of a bricklayer, 8 wks., rupture of a blood vessel of the brain, from an accidental fall against a table ( <i>post mort.</i> )	51 hours	Wife of a journeyman tailor, 42, cut her throat with a carving knife (suicide in unsound mind)	*	F. 4, debility consequent on a burn received, while playing with a lighted paper at the fire ( <i>no inquest</i> )	12 days
M. 7, crushing of the belly by a van wheel—accidentally knocked down by the horse, while running at play	2½ hours	In Bartholomew's Hospital, innkeeper, 39, disease of his lungs, accelerated by cutting his throat with a razor (temporary insanity) at Newcastle Street ( <i>post mort.</i> )	1 week	Widow of a dyer, 83, burn of the head and face—fell from the chair against the grate, from feebleness	46 days
Porter, 68, fracture of the skull—struck by the shaft of a ginger beer cart, drawn by one horse, when crossing the road at Charing Cross, endeavouring to avoid another cart	instantly	M. 67, suicide with a razor, by loss of blood from the throat and wrist	9 days	Poison:—	
In Bartholomew's Hospital, seller of wood, about 72, effects of a fractured thigh from being run over by his own cart, whilst he was driving, at Blackfriars Bridge	7 weeks	Drowning:—		Medical student, 22, suicide by prussic acid—(being in a temporary state of insanity)	*
In Bartholomew's Hospital, stableman, 58, concussion of the brain, caused by a kick of a mare, whilst the deceased was tripping her head at King's Mews ( <i>post mort.</i> )	1 hour	M. 50, drowning—how he came into the water unknown—probably suicide ( <i>post mort.</i> )	*	Butcher in the slaughtering department, 22, sloughing ulcers in the right groin	4 months
In Bartholomew's Hospital, sawyer, 49, fracture of the skull and injury of the brain, caused by falling off a log of mahogany, on to a kerb stone, as he was unloading a timber carriage at Bethnal Green ( <i>post mort.</i> )	12 hours	M. 45, throwing himself into the water—not known whether insane—at a <i>post mort.</i> examination complete evidence of sanguineous cerebral apoplexy found, and none of suffocation, as if killed by the shock.	*	The wounds commenced in the form of small carbuncles, in the superficial glands of the groin, which burst, spread, and conalesced, forming one deep and unhealthy wound of 12 inches in diameter—supposed to have arisen from the absorption of a poison from disease in the lower animals—( <i>no inquest</i> ).	3 months
Gentleman, 37, concussion of the brain by a fall from his horse	16 days	Banker's clerk, 34, suicide by drowning—insane.	*	Loss of Blood:—	
F. 70, old age and gangrene, from injury done to the rectum	years ago	Hanging and Suffocation:—		M. newly born, loss of blood through the umbilical cord, from wilful and malicious neglect at birth, by persons unknown.	*
F. under 1, injury of the head received during birth ( <i>no inquest</i> )	*	M. 74, hanged himself in a temporary state of insanity.	*	Means not stated:—	
		F. 6 wks., accidentally overlaid by another child, 16 months old.	*	Assistant at a wine merchant's, 19, unknown—body much decomposed—disappeared suddenly from home on October 5th, after a quarrel—probably suicide.	*
		Burns:—			
		F. 4, effect of burn ( <i>no inquest</i> —how was the burn caused?)	*		
		In Bartholomew's Hospital, daughter of a brass mounter, 6, burnt by her clothes taking fire, whilst alone in a room (at Whitecross Place, Finsbury)	5 hours		

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
In Westminster Hospital, M. 27, congestive apoplexy.		F. about 3 mon., exposed to cold and wet by abandonment in the (Regent's) Park, by a person unknown, so being guilty of wilful murder.		M. 91, natural—had cough—not under medical treatment	*
effusion of serum at the base, and in the ventricles of the brain ( <i>post mort.</i> )	about 12 hours	M. 27 (prisoner), old disease, with adventitious membrane, at the base of the brain, terminating in effusion into the ventricles—all 13 days.		F. 66, { serous apoplexy—disease of the liver and heart ..... of long duration	
M. 53, phthisis, terminating in colliquative diarrhoea	*	F. 66, natural—became speechless out of doors—died in 3 hours—previous disease in the chest	*	M. 56, natural death—sudden—from epilepsy	4 hours
F. 13, natural death—inflammation of the lungs—diarrhoea—dropsy	*	F. 15, disease of the heart—not under medical treatment	*	M. 6 mon., natural death—sudden—from inflammation of the chest	*
F. 8, natural death—peritonitis ( <i>post mort.</i> )	*	M. 58, apoplexy—first attack lasted 1 day—previous giddiness.	*	F. 25, natural death—consumption	*
In Guy's Hospital, F. 38, natural death—peritoneal inflammation	*			M. 54, natural death from diseased heart	*
M. 11 days, natural—symptoms of affection of the head	*			M. 37, natural death—sudden—from apoplexy	*
F. 60, hypertrophy of the heart—under treatment for asthma ( <i>post mort.</i> )	of long duration			F. 72, natural death—abscess of the lung—( <i>post mort.</i> )	*

CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 3 mon., natural—not previously ill—fell by hand for 2 months.		F. 7 wks., natural—no previous illness	*	F. 4 mon., natural—not previously ill in any respect	*
M. 42, natural—fell at work in a barge, and died instantly—had rheumatism 6 months ago.		F. 60, natural—seized with pain in the temple, and insensibility, and died in (two attacks previously)	half an hour	F. 46, found dead without marks.	*
				F. 4, natural death—sudden—but cause not ascertained	*

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's II:—	duration	Westminster II. (continued):—	duration	Middlesex II:—	duration
F. 23, { tumour in the left side disease of the heart	*	M. 10, disease of heart—consumption	*	M. 30 (cause of death not yet reported).	*
Westminster II:—		M. 11, peritonitis	*	University College II:—No deaths registered.	
M. 32, febris	*	M. 25, valvular disease of heart and dropsy—( <i>post mort.</i> )	*		
M. 32, phthisis	*	F. 21, diseased heart and valvular disease	years		
M. 50, effects of amputation—ulceration of the knee joint	*	F. 50, diseased kidneys and dropsy ( <i>post mort.</i> )	*		
		Charing Cross II:—No deaths registered.			

ERRATUM.—In a return from this Hospital for the week ending Nov. 7th, for "death in 2 hours after tapping," read "death in 2 days after tapping."

THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued).—

Fever II.:		duration	Fever II. (continued):		duration	St. Bartholomew's II. (continued):		duration
M. 27,	fever.....	9 days	fever.....	16 days		M. 48, extensive disease of the lungs, and acute ophthalmia.....		*
	from Pentonville—in hospital 3 days.		menorrhagia.....	3 days		F. 45, ulceration of the bowels.....	10 weeks	
M. 27,	fever.....	some weeks	ulcers in ilium—effusion of blood in sheath of rectus abdominis muscle (post mort.).....			F. 56, emphysema and bronchitis.....	2 years	
	ulceration in ilium, and exposure of peritoneal coat of intestine (p.m.). from Stepney—in hospital 21 days.			from Islington—in hospital 9 days.		F. 23, extensive sloughing of the walls of the vagina.....		*
F. 15,	phthisis—fever.....	*	Small Pox II.:—No deaths registered.			London H.:		
about 10,	miliary tubercles to a great extent in both lungs—tubercular inflammation in the ilium (post mort.).....		King's College II.:			M. 64, diseased liver.....	3 years	
	from Lambeth—in hospital 6 hours.		M. 30, inflammation of the brain.....	2 weeks		M. 65, dilatation of the heart (post mort.).....	2 years	
	fever—pneumonia.....	about 3 weeks	M. 55, phthisis.....	4 months		M. 39, diseased kidney.....		*
F. 15,	grey hepatization of middle lobe of right lung—ulceration of Peyer's glands (post mort.).....		M. 22, pneumonia (post mort.).....	2 weeks		St. Thomas' II.:		
	from Soho—in hospital 3 days.		M. 45, pleurisy.....	2 weeks		M. 28, amaurosis—phlegmonous erysipelas.....		*
	fever.....	about 4 days	M. 40, disease of the brain (post mort.).....	2 years		M. 18, typhus.....	35 days	
F. 22,	very extensive enlargement and inflammation of glands of Peyer and Brunner—some softening of cerebellum (post mort.).....		M. 42, phthisis (post mort.).....	6 months		M. 42, { phthisis.....	25 weeks	
	from Southwark—in hospital 2 days.		M. 55, calculus vesicæ—cystitis (post mort.).....			ascites.....	1 year	
	fever.....	8 days	F. 13, vascular tumours—erysipelas—chronic abscesses.....			M. 62, meningitis (post mort.).....		*
F. 17,	ulceration in ilium—great thickening of ilio-cæcal valve (post mort.).....		F. 21, { typhus fever.....	2 months		F. 62, fungous disease of the breast.....		*
	from Old Bailey—in hospital 3 days.		F. 38, Bright's disease of kidney.....	4 months		Guy's H.:		
						M. 41, bronchitis.....		duration
			St. Bartholomew's II.:			M. 37, diseased kidneys—hematuria.....		*
			M. 17, inflammatory sore throat.....			M. 20, bronchitis.....		*
			M. 35, delirium tremens.....			F. 53, jaundice, &c.....		*
						F. 14, chronic bronchitis—pleuritis.....		*

Dreadnought II.:—No deaths registered.

DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox:		duration	Typhus (continued):		duration	Hernia:		duration
M. 5,	small pox.....	10 days	F. 3, typhus.....	4 weeks		F. 97, constipation resulting from femoral hernia.....		*
	first attack—never vaccinated.		M. 53, { fever.....	7 days		M. 3 days, ruptured intestine.....		*
F. 7 mon,	varicella.....	6 days	M. 14, fever with pneumonia, and ulceration of the bowels (post mort.).....	2 days		M. 69, strangulated bowels.....	4 days	
M. 1,	small pox (not vaccinated).....	*				F. 48, incarcerated femoral hernia.....		*
M. 4,	small pox.....	2 weeks	M. 22, low nervous fever.....	14 days		Diabetes:		
	without previous vaccination.		M. 8, typhus fever.....	21 days		No deaths registered from this cause:—		
Diarrhœa:			F. 49, fever.....	14 days		Stone:—See Return of King's College Hospital.		
F. 9 mon,	diarrhœa.....	6 days	F. 5, fever.....	30 days		Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.		
	convulsions.....	12 hours	F. 67, fever.....	10 days		F. 25, { childbirth.....	48 hours	
M. 1 mon,	diarrhœa.....	3 or 4 days	M. 3, typhus fever.....	14 days		hemorrhage and uterine inflammation.....		
F. 73,	diarrhœa.....	2 months	F. 21, { typhus fever.....	3 weeks		F. 26, peritonitis after delivery.....	5 days	
	producing exhaustion.		M. 12, { typhus.....	5 weeks		hemorrhage from the womb from a partial placental presentation.		
M. 2 mon,	mucro-enteritis—diarrhœa.....	5 days	M. 55, typhus fever.....	*		death in 2 hours after delivery.		
F. 50, diarrhœa.....		3 days	M. 47, typhus fever.....	*		F. 36, difficult parturition, succeeded by typhoid state.....	4 days	
F. 3, diarrhœa.....		*	M. 2, fever typhoid—decline.....	3 weeks		F. 40, { puerperal fever.....	5 days	
M. 59, diarrhœa and general decay.....		*	F. 13, typhus fever.....	16 days		peritonitis.....	5 days	
F. 32, diarrhœa.....		*	M. 72, { fever.....	12 days		F. 29, { premature labour.....	7 weeks	
M. 7 weeks, chronic diarrhœa.....		14 days	M. 38, typhus.....	30 days		consumption.....	7 days	
M. 6 mon, internal bowel complaint.....		*	F. 17, { typhus.....	6 weeks		parturition.....	3 days	
M. 52, diarrhœa.....		*	M. 42, fever.....	*		peritonitis.....	3 days	
F. 1, dentition—diarrhœa.....		10 days	F. 58, { jaundice.....	17 days		F. 28, puerperal peritonitis.....	12 days	
M. 20, diarrhœa.....		1 month	F. 53, { typhus fever.....	4 days		F. 38, { childbirth.....	8 days	
F. 52, { diarrhœa.....		1 month	M. 21, fever.....	14 days		exhaustion and general debility.....	8 days	
F. 1, diarrhœa.....		2 months	M. 64, fever.....	*		F. 31, { childbirth.....	2 days	
F. 41, diarrhœa.....		from birth	M. 4, fever.....	*		peritoneal inflammation.....	5 or 6 hours	
			F. 3, fever.....	*		uterine hemorrhage after giving birth to twins.....	11 hours	
Dysentery:			M. 21, { typhus fever.....	3 weeks		F. 41, { childbirth.....	1 hour	
M. 1, dysentery—dropsy.....		2 months	M. 4, typhus fever.....	2 weeks		uterine hemorrhage.....	4 days	
F. 60, dysentery.....		10 days	M. 30, fever.....	1 week		difficult labour.....	6 days	
M. 66, dysentery.....		7 weeks	F. 4, typhus.....	8 days		puerperal fever (no inflammation).....	3 or 4 weeks	
F. 40, { dysentery.....		4 months	F. 67, typhus.....	3 days		abortion with dead child.....	14 days	
	exhaustion.		F. 35, typhus gravior.....	7 days		flooding—œmia—premature labour.....	13 hours	
F. 32, hemorrhage from the bowels.....			M. 8, fever.....	2 weeks		fever with delirium 5 days before confinement with a dead child.....	8 days	
Cholera:			F. 23, fever.....	2 weeks		fluorid heart—fatty.....	13 hours	
No deaths registered from this cause.			M. 1, { convulsions.....	3 days		confinement.....	8 days	
Other cases of diarrhœa not assigned to this head in abstract:—			F. 6 weeks, inflammatory fever.....	6 months		syncope (assigned to dis. of heart in abstract).		
F. 70, disease of mitral valves—anasarca—diarrhœa—coma.....		of long standing	F. 3, general debility after fever.....			Delirium tremens:		
F. 70, { paralysis.....		6 days				M. 41, delirium tremens.....		*
ulceration of the rectum.....		8 days				M. 31, { delirium tremens.....	10 days	
M. 43, { anasarca.....		1 year				followed by arachnitis and serous effusion (post mort.).....		*
diarrhœa.....		*				M. 45, delirium tremens.....		*
F. 43, anasarca and diarrhœa.....		*				See Return of St. Bartholomew's Hospital.		
Typhus:						Intemperance:		
M. 30, { pneumonia.....		2 weeks				M. 76, { delirium a potu.....	3 days	
typhus fever.....		3 weeks				coma.....	1 day	
F. 74, { debility.....		some months				inebrietas.....	1 month	
low fever.....		3 weeks				phthisis.....		*
F. 10, fever.....		11 days				Privation:—See Coroner's Returns.		
M. 2, { typhus fever.....		14 days				scarlatina.....	10 days	
bronchitis.....		*				pneumonia.....	7 days	
F. 69, fever.....		*				M. 1, { debility induced by the aforesaid complaints, and the indigent circumstances of the parents. (assigned to scarlatina in abstract.).....		
M. 12 weeks, fever—pneumonia.....		2 weeks				Unwholesome Employment:		
fever.....		10 days				debility.....	1 month	
M. 5, { effusion on the brain.....		3 days				M. 58, { supposed to have been produced by his employment as a coppersmith.....		
F. 18, fever.....		9 days						
F. 62, { diarrhœa.....		4 weeks						
hepatitis.....		3 weeks						
F. 55, typhus fever.....		14 days						
M. 2, typhus fever and convulsions.....		*						
F. 56, nervous fever.....		*						
F. 50, { rheumatismus acutus.....		1 month						
febris typhoides.....		10 days						

RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

		duration			duration			duration

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.	See General Remarks.	The sky was generally about one-half covered with cirro-stratus, cumuli, and send throughout the day. At 11h. 10m. rain began to fall heavily, and at 11h. 30m. there was a flash of lightning, followed by a clap of thunder, which lasted about 3s. The rain ceased soon after this. At 2h. 25m. there was a gust of wind amounting to 10lbs. on the square foot.
MON.	Nothing was shewn throughout the day.		Overcast throughout the day. Rain was falling slightly from 2h. a.m. till noon, and again in the evening.
TUES.	Slightly positive from noon till 2h. p.m., and tension moderate at 2h. 20m. p.m.	See General Remarks.	The sky was generally overcast throughout the day, except at about 6h. p.m. when it was nearly cloudless. Rain was falling from 6h. a.m. till noon, at times rather heavily.
WED.	Positive and tension moderate at 9h. 20m. a.m.	Overcast. Cirrostratus	The sky was about one-half covered with cirro-stratus till 5h. a.m. Generally overcast throughout the remainder of the day, except at about midnight, when it was nearly cloudless. Rain was falling from 3h. 45m. a.m. till 3h. a.m.; and from 2h. p.m. till 5h. 30m. p.m.
THURS.	Positive and very weak from 6h. to 6h. a.m. Positive and tension moderate at 9h. 20m. p.m. Nothing was shewn at any other times.	See General Remarks.	Cirrostrati, fleecy clouds, and send generally covered about one-third of the sky till 6h. p.m., from which time till midnight it was about three parts covered. The magnets were disturbed during the afternoon and evening.
FRID.	Positive and very active from 5h. a.m. till 2h. p.m.	Thick fog.	Generally overcast and a thick fog throughout the day.
SAT.	Positive and generally very weak from 9h. p.m. till midnight.	See General Remarks.	Cirrostratus covered the greater part of the sky till 6h. p.m., when it was cloudless. The remainder of the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The solar radiating thermometer is out of order.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 44.9; and the mean reading at 7h. 30m. P.M., was 47.6; the mean readings at the Royal Observatory for the same times were 43.8 and 46.9 respectively.

† The mean direction of the wind for the first five days is S.S.W., and for the remainder of the week N.W.

*During the Week ending Saturday, December 5th, 1846.*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination throughout the day.	See General Remarks.	Cirri and light clouds were prevalent till 10h. 40m. a.m. After that time the sky was generally cloudless. A fog prevailed in the evening.
MON.	Positive and tension moderately active throughout the day. The maxima at 6h. p.m. and 11h. p.m.		Cloudless till 10h. a.m. Before 11h. a.m. the sky became overcast with cirrostratus, and con- tinued so for the remainder of the day. A fog was prevalent in the morning and afternoon.
TUES.	Positive and tension very strong through- out the day.	See General Remarks.	The sky was overcast with cirrostratus till 2h. p.m. It was occasionally clear in the afternoon and evening. There was a thick fog during the greater part of the day.
WED.	Positive and tension strong till 5h. p.m. The maximum at 7h. 20m. a.m.	See General Remarks.	Generally overcast with cirrostratus and scud throughout the day.
THURS.	Nothing was shewn till 5h. a.m. Positive and tension moderate during the remainder of the day. The maxima at 9h. a.m., and 11h. 20m. p.m.	See General Remarks.	Cirrostratus and scud covered the sky till 2h. p.m., then about one-half covered with cirrostratus, scud, and fleecy clouds till 6h. p.m., and cloudless, but foggy, throughout the remainder of the day.
FRI.	Positive and tension moderate during the remainder of the day. The maximum at 1h. 20m. a.m.	See General Remarks.	The greater part of the sky was cloudless throughout the day, except from 2h. 30m. till 6h. a.m., when it was overcast.
SAT.	Positive and tension strong throughout the day, except at 11h. 20m., When it was negative and very active.	See General Remarks. Rain falling.	The sky was generally covered with cirrostratus and scud, except at about 1h. a.m., and from 11h. a.m. till 2h. p.m., when it was cloudless. Rain was falling from 9h. p.m. till midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The solar radiating thermometer was out of order on Sunday and Monday.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 20m. A.M., was 51.3; and the mean reading at 7h. 30m. P.M., was 54.3; the mean readings at the Royal Observatory for the same times were 30.1 and 32.5 respectively.

† The mean direction of the wind for the week is N.N.W.

## A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, December 12th, 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 49.

(The tabular abstract on the first page is for the week ending Saturday, Dec. 12th. The following selection of cases is made from the returns for the week ending Dec. 5th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation (continued):—	duration
In University College Hospital, bricklayer's labourer, 27, injuries of the head and body by falling from the roof of a house, 68 feet, (not known how he came to fall) .....	2 hours	In University College Hospital, porter to a railway carrier, 29, crushing of the chest between two luggage trucks, while at work at the London station of the London and North-Western Railway, owing to the trucks arriving 4 hours after their proper time.		F. 4 wks., suffocation by pressure against the mother's breast, when asleep (post mort.).	
In University College Hospital, carpenter, 40, injuries of the chest by falling 40 feet from a roof plank, across which he was walking, while intoxicated .....	6 days	Wounds:—		Burns and Scalds:—	
{ chronic bronchitis .....	5 years	F. servant, 22, suicide by cutting her throat with a carving knife .....	*	In University College Hospital, son of a bricklayer, 3, burns from his pinafore taking fire at a grate without a screen, in a short absence of its mother .....	26 hours
M. 71, { fractured rib, by falling down stairs .....	2 weeks			Son of a mate of a ship, 2, accidental death by burns from clothes taking fire .....	*
{ diarrhoea (no inquest) .....	1 day	Drowning:—		Glass cutter, 72, accidentally burnt by his clothes taking fire .....	*
Daughter of a carman, 4, concussion and compression of the brain, by falling through the balustrade of the stairs .....	1 week	M. 12, accidentally drowned by falling into a pond at Clapton—under water 1 hour.		Son of a labourer, 1, accidental death from burns, by the clothes taking fire .....	*
F. 52, accidental death from a fall down a trap-door, and fracture of collar-bone .....	*	Mariner, 26, accidental death from drowning, by a fall into the London Docks, from the quay.		F. 16, burnt to death by a house (No. 32, New Cut, Lambeth,) taking fire accidentally ..	*
M. 7 mon., compression of the brain, from a fall to the ground accidentally .....	7 days	F. newly born, asphyxied by drowning—wilful murder against the mother.		F. 3, burns received by her clothes taking fire accidentally .....	48 hours
Labourer, 32, accidental death by the fall of a block, causing a compound fracture of the skull .....	instant	Hanging and Suffocation:—		Daughter of a cooper, 2, accidental death from scalds on the neck and chest, caused by the fall of a jug of a boiling water .....	10 days
In University College Hospital, carman, 35, crushing of the belly by a cart run away with by a restive horse .....	44 hours	Wife of a Messenger in the Ordnance Office, 42, hanging herself by a handkerchief to the rail of a bedstead (in temporary insanity) ..	died instantly	Poison:—	
M. 22, { lumbar abscess .....	1 year	Groom, 27, suicide by hanging himself in a police cell (being in a temporary state of insanity) .....	4 minutes	M. 15 wks., one grain of opium in a Dover's powder, administered by mistake, being designed for the mother .....	15 hours
{ (no inquest—an imperfect return.)				Improper Food:—	
				{ congestion of the brain, consequent upon irritation of the intestines from natural causes—insensible .....	30 hours
				{ (after eating improper food (post mort.))	

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
In University College Hospital, M. 59, natural—sanguineous apoplexy—fell insensible in the street—lived .....	20 hours	F. 2, natural death—sudden—from a fit .....	*	F. 49, natural death—sudden—from effusion on the brain .....	*
M. 62, natural—symptoms of asthma and disease of the heart .....	for some months	F. 41, natural—disease of the heart—seized, and died instantly.	*	M. 59, natural death—sudden—from inflammation of the bowels .....	*
F. 40, natural—apoplexy (1st attack)—fell suddenly, and died in .....	10 min.	F. 61, natural death—most probably from diseased heart—died instantly.	*	F. 66, sudden death from apoplexy .....	*
F. 3 mon., natural—symptoms of disease of the head for .....	2 days	F. 3 wks., exposure to cold, being out with its parents at a late hour of the night .....	*	F. 73, natural death—sudden—from apoplexy	*
F. 73, natural—disease of the lungs—not under medical treatment .....	*	F. 47, apoplexy .....	1 hour	M. 54, natural death—rupture of a vessel from diseased heart .....	*
F. 43, cessation of the heart from degeneration of its structure—fell while walking after running—died instantly (post mort.).	*	M. 40, natural death—sudden—from inflammation and rupture of intestines .....	*	F. 10 mon., natural death—diarrhoea .....	*
F. 59, natural—asthma and dropsy—not under medical treatment .....	*	M. 4 days, sudden, from convulsions .....	*	F. 1, natural death—had been teething .....	*
{ natural congestion of the brain, without known previous illness .....	1 week	M. 35, natural death—sudden—from diseased lungs .....	*	F. 5 mon., natural death—atrophy, from want of breastmilk .....	*
{ after being put on spoon diet—(post mort.).		F. 60, natural death—sudden—from apoplexy	*	M. 2, natural death—congestion of the right lung (post mort.) .....	*
F. (age not stated), natural—no previous illness—except occasional spasms from flatulence ..	*	M. 53, natural death from the rupture of a blood vessel .....	*	F. 40, natural death—disease of the heart .....	*
		M. 3 mon., natural death—sudden—from convulsions and teething .....	*	F. 64, natural death—chronic consumption—refused medical assistance .....	*
		M. 17, natural death—diseased heart—instantaneous .....	*	F. 41, natural death—rupture of a blood vessel of the brain—sudden (post mort.) .....	*
				M. 10, natural death—rupture of an abscess of the brain—instant .....	*

### CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration
F. 72, natural—no previous illness .....	*	F. 46, sudden—natural causes .....	*

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

*St. George's H.:—*

*Westminster H.*:—

*Charing Cross H.:*—

*Middlesex H.* :—

University College H. :—

*Small Pox H.*:—No deaths registered.

*Small Pox :—*

*Diarrhæa* :—

*Dysentery* :—

**Cholera :—**

*Other cases of diarrhoea not assigned to this head in abstract:—*

71. *scirrhus pylorus*. . . . . 15 months

*Typhus* :—

duration

. 35, malignant disease of the kidney and lungs

F. 64,	chronic gastritis .....	*	F. 20,	peritonitis .....	2 years	F. 1,	strophulus .....	9 weeks
	thickening of pylorus, and permanent contraction, prohibiting even moisture to pass.		F. 18,	disease of the bowels of the ear .....	2 years	F. 16,	hydrops pericardii .....	12 hours
F. 31,	disease of the heart .....	*		abscess in the right hemisphere of the brain, and gangrene of the dura mater	9 days		spontaneous perforation of the stomach—no peritonitis—died of the shock to the system .....	125 mins.
M. 1,	hooping cough .....	25 days	M. 15,	pleuritis .....	3 weeks	M. 50,	laryngitis .....	48 hours
	pneumonia .....	15 days		pericarditis .....	4 days	M. 9,	acute rheumatism .....	14 days
	apoplexy .....	5 days	F. 41,	pthisis pulmonalis .....	*	M. 11 mon.,	pericarditis—bronchitis .....	36 hours
M. 4 mon.,	inflammation of the bowels .....	2 weeks	F. 23,	scirrhus disease of the stomach .....	1 year		aneurism of thoracic aorta .....	16 years
	stricture of the intestine .....	1 day	M. 40,	perforation of the stomach .....	16 hours		absorption of bodies of second and third dorsal vertebræ .....	1½ year
	a band of lymph around the ilium, forming a complete stricture.		M. 42,	carcinoma of stomach and liver .....	20 months	M. 45,	paraplegia .....	3 weeks
				disease spleen .....	2 years		dyspnoea .....	3 weeks
M. 61,	ascites .....	3 months		peritonitis .....	5 days	M. 61,	exhaustion .....	
	hypertrophy .....	5 years	F. 40,	peritonitis .....	5 days		ossific deposit in aortic valves and coronary arteries, with ossification of the arteries at the base of the brain .....	4 days
	anasarca .....	6 weeks		affecting principally the verniform portion of the intestine.				
M. 33,	pthisis pulmonalis .....	3 weeks						
M. 47,	diseased vertebræ .....	18 months						
	effusion in the brain .....	*						

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 12th December, 1846.

Day.  —  1846	Phases  of the  Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND							Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension strong at 9h. 40m. a.m. Nothing was shewn at any other ex- amination.	} See General Remarks.	The sky was generally cloudless till 1h. p.m., at which time the clouds began to collect, and it was mostly overcast during the rest of the day.
MON.	Nothing was shewn till 6h. a.m. Positive and tension moderate during the rest of the day.	} See General Remarks.	With the exception of a few breaks about 1h. p.m., it was overcast with cirrostratus and scud throughout the day.
TUES.			Overcast with cirrostratus and scud till 2h. p.m., and the sky was generally about two-thirds covered during the remainder of the day, except at midnight, when it was quite overcast.
WED.	Positive and tension strong throughout the day. The max. at noon.	} See General Remarks.	The sky was overcast throughout the day. A thin misty rain was generally falling from 1h. p.m. till midnight. A fog prevailed during the afternoon.
THURS.	Positive and tension occasionally very strong throughout the day. The max. at 5h. 20m. p.m.	} See General Remarks.	Overcast with cirrostratus and scud throughout the day, except about midnight, when it was overcast. Rain was falling occasionally during the afternoon, and at 9h. p.m. snow was falling. On Thursday afternoon the weather suddenly changed. At 5h. 30m. p.m. the direction of the wind changed from S.W. to N. by W., and it blew from the latter quarter with pressures varying from 4lbs. to 5lbs. At 5h. 20m. p.m. the reading of the thermometer was 42°; at 7h. it was 37°; at 9h. it was 34°; and by midnight it was less than 32°; and it continued to decrease after this time.
FRID.	Positive and tension strong at 1h. 40m. p.m., and 11h. 20m. p.m. Positive, but very weak at other times.	} Snow was falling at times when the strongest positive electricity was shewn.	The sky was generally about one-half covered with cirrostratus, fleecy clouds, and scud till 10h. a.m. Overcast from that time till 4h. p.m., and cloudless during the rest of the day. Snow was fall- ing from 11h. a.m. till 2h. p.m.
SAT.	Positive and tension strong throughout the day. The max. occurred at 2h. 30m. p.m.	} Overcast. Cirrostratus Snow was falling.	Cloudless till 2h. a.m.; shortly after this time the sky became overcast with cirrostratus, and remained so till noon. In the afternoon and evening the amount of cloud was variable, and it became quite overcast at 9h. 30m. p.m. Snow was falling frequently in the afternoon.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 35.4; and the mean reading at 7h. 30m. P.M., was 37.2; the mean readings at the Royal Observatory for the same times were 34.6 and 35.8 respectively.

† The mean direction of the wind for the week is N.

## A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, December 19th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 50.  
(The tabular abstract on the first page is for the week ending Saturday, Dec. 19th. The following selection of cases is made from the returns for the week ending Dec. 12th.)

# RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning:—	duration
In St. George's Hospital, son of a servant, 10, fracture of the skull and laceration of the brain—fell over the banisters of a skylight into a stable, when at play in a loft at No. 6, Market Street ( <i>post mort.</i> ) . . . . .	6 days	Keeper of a chandler's shop, 49, natural—pneumonia, accelerated by falling into a ditch accidentally. . . . .	*	Labourer, 31, drowning—fell from the gangway of a dredging machine—under water 2 days.	
In St. George's Hospital, labourer, 35, secondary suppuration—compound fracture of right foot—fell from the breaking of a ladder in Mr. Osborne's seedroom, at Fulham ( <i>p.m.</i> ) 12 days	12 days	Son of a tobacconist, 8 days, injuries occurring during difficult parturition. . . . .	*	M. newborn, found dead without marks, in the River Thames.	
In St. George's Hospital, carpenter, 24, abscess in the lung, rupture of diaphragm, fracture of both arms at the wrist joint—fell when stepping on to a party wall, when at work at a building at Gloucester Terrace, Paddington ( <i>post mort.</i> ) . . . . .	78 days	Labourer, 43, jamming of the chest between the body and wheel of a gravel cart, which he was tilting backwards. . . . .	instant	Son of a ropemaker, 1, drowned by falling into a certain ditch accidentally.	
In St. George's Hospital, painter, 31, diffuse inflammation of head, neck, and face, following wound of the scalp—accidentally fell in a gateway, adjoining the Hans Town Tap, in Lower George Street, Chelsea, when scuffling with another man (both intoxicated) —( <i>post mort.</i> ) . . . . .	10 days	In St. George's Hospital, brewer's drayman, 42, delirium tremens, following compound fracture of right leg—leg crushed when sitting on the fore part of a brewer's dray, drawn by two horses, driven by another man. The fore horse shied, and ran the dray against a post in Beaver Lane, Hammersmith . . . . .	7 days	Master tailor, 40, suffocated and drowned by falling into a ditch accidentally.	
Son of a Chelsea pensioner, 7, concussion of the brain—fell from the stair banisters of a gallery in St. Mary's Boys' School Room, Vincent Square, when sliding down the banisters astride, when at play . . . . .	27 hours	Out-pensioner of Chelsea Hospital, supposed about 65, fracture of skull—knocked down and run over by a cart drawn by one horse, in Queen's Row, Chelsea—stumbled when stepping from the high foot pavement, and suddenly reeled into the road ( <i>post mort.</i> ) <i>abt 15 min.</i>			
In King's College Hospital, F. dressmaker, 33, fracture of the breast bone, 4 ribs and 5th dorsal vertebra—fell down stairs (at 4, Vere Street) ( <i>post mort.</i> ) . . . . .	39 hours	In St. George's Hospital, drover, 50, fracture of the skull and laceration of the brain—run over by a phaeton drawn by two horses, when driving sheep in the Bayswater Road ( <i>p.m.</i> ) 3 days	3 days		
In St. Bartholomew's Hospital, hair dresser, 53, fracture of his left leg, hip and jaw, and other injuries, caused by throwing himself from an upper window (King Street, Snow Hill) in temporary insanity . . . . .	5 hours	Daughter of a single woman, 4, fracture of five ribs—rupture of lungs and spleen—ran against and was knocked down and run over by an omnibus, drawn by two horses, when crossing Ebury Street ( <i>post mort.</i> ) <i>a few mins.</i>	<i>a few mins.</i>		
In St. Bartholomew's Hospital, painter, 40, consumption, accelerated by injury to his knee joint, by a fall in St. Paul's Cathedral, whilst painting ( <i>post mort.</i> ) . . . . .	10 weeks	Labourer, 43, the falling of three houses, which were being built too fast, and too high, and without bond timber in the party walls, the Act of Parliament directing no such timber to be used.			
F. 3, { had a fall . . . . .	about 4 months since	M. 50, accident—erysipelas—terminating in extensive suppuration. . . . .	5 weeks		
(no inquest)		(no inquest—what was the nature of the accident?)			
M. about 55, hæmorrhage from the stomach, accelerated by several falls, through weakness . . . . .	7 days	Wounds:—			
M. 64, prostration of the natural powers, from severe injury to the right elbow joint, occasioned by an accidental fall while cleaning windows . . . . .	1 week	In St. George's Hospital, labourer, 41, secondary deposit in the lungs, and compound comminuted fracture of bones of right hand—amputation of little finger. A cannon with which he was playing at Isclworth on 5th November, went off in his hand ( <i>p.m.</i> ) 31 days	31 days		
F. 49, falling in a fainting fit, with her neck on a fish kettle, causing congestive apoplexy—found dead.		In King's College Hospital, Sheriff's Officer (now out of employment), 76, suffocation by secretions into the windpipe, from a wound in the throat, inflicted by himself with a razor, when in a state of temporary insanity 42 hours	42 hours		
		M. 59, stabbing himself with a knife in the region of the stomach (in temporary insanity) 1 hour	1 hour		
				</	

CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.												
			duration				duration				duration	
In St. George's Hospital, M. 56, spasm of glottis, from aneurism of the arch of aorta (died in a few minutes) <i>post mort.</i>				M. 33, rupture of pulmonary blood vessels—suddenly, from disease of lungs.....			*	M. 74, natural death—sudden, from apoplexy			*	
F. 54, spasm, produced by calculus in the gall bladder, weighing 3 drachms ( <i>post mort.</i> )			7 hours	F. 64, natural—not under medical treatment—had symptoms of diseased heart—suddenly fell and died in 14 hours.				M. 70, natural death—sudden, from ossification of the aorta .....			*	
In the House of Correction, Westminster, prisoner, formerly a mason's labourer, 57, natural from general debility.....			*	F. 66, natural death—sudden, from diseased heart				M. 10 mon., natural death, from mesenteric disease .....			*	
In St. Bartholomew's Hospital, M. 46, ossification of the valves of the heart—died instantly .....			*	F. 65, natural death—sudden, from serous apoplexy .....			1 day	F. 60, sudden death, from apoplexy .....			*	
M. 1 day, natural—had spasm of the throat when attempting to swallow—not attended medically .....			*	M. 62, natural causes—asthma .....			day	M. 11 mon., natural death—effusion in the pericardium ( <i>post mort.</i> ).....			*	
F. 37, suffocation from extravasation of blood from the lungs in the air passages—phthisis—hæmoptysis .....			*	M. 4, natural death—general exhaustion and debility .....			*	M. 56, natural death—inflammation of the lungs			*	
{ disease of lungs..... of long duration				M. 67, natural death—most probably from diseased heart (died instantly) .....			*	M. 68, natural death—sudden, from asthma ..			*	
F. 49, { not under medical treatment—died suddenly.				M. 52, natural causes—found dead in a privy, supposed from the rupture of a vessel of the head or heart .....			*	M. 55, natural death—sudden, from apoplexy			*	
				In district of Cripplelegate, F. 11, diarrhoea, brought on by cold and want of necessities 3 weeks				M. 6 mon., natural death—sudden, from convulsions .....			*	
				F. 79, natural death—most probably disease of the heart .....			*	M. 2 mon., natural death—convulsive fits .....			5 hours	
								M. 6 days, natural death—inflammation of the intestines .....			*	
								Single woman, 40, cold and exposure—and fit resulting from intemperance (an habitual drunkard) .....			*	
								F. 48, natural death—dropsy .....			*	

THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.		St. George's H. :—		King's College H. :—		Guy's H. (continued) :—		
	duration				duration		duration	
St. George's H. :—								
I. 40, disease of the brain	*	See Coroners' Returns.						
60, { phthisis pulmonalis	*	St. Bartholomew's H. :—						
{ fistula in ano (post mort.)	*	M. 36, dropsy	*	M. 18, fever	*	M. 33, tubercular phthisis—peritonitis, (p.m.)	*	
I. 55, { encephaloid disease of testis	15 months	M. 22, epilepsy	*	M. 77, bronchitis	*	M. 30, consumption	*	
{ bronchitis	5 weeks	M. 8, tumour in the back of the mouth	*	F. 46, general dropsy	*	F. 25, phthisis	*	
{ erysipelas (post mort.)	12 days	M. 38, suppuration of the lungs	*	Dreadnought H. :—				
I. 22, fever	*	M. 31, dropsy	*	{ typhus with ulceration of the ilium. . . 34 days				
See Coroners' Returns.								{ laryngitis, œdema, and ulceration. . . 6 days
Westminster II. :—No deaths registered.								{ laryngotomy . . . 3 days
Charing Cross H. :—								{ double pleuro-pneumonia (post mort.) 2 days
See Coroners' Returns.								M. 36, pneumonia of right lung . . . 6 days
Middlesex H. :—								M. 15, typhus with ulceration of the ilium. . . 21 days
I. 21, emphysema pulmonum	*	London H. :—						{ pneumonia of right lung . . . 16 days

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shewn at any examination.	See General Remarks.	The sky was covered with cirrostratus and scud throughout the day.
MON.	Positive and very active throughout the day, except at about 5h. a.m., when it was positive, with tension very weak. The max. at 7h. a.m. Sparks were frequently shewn.	See General Remarks.	The sky was generally cloudless throughout the day, except from 1h. to 4h. p.m., when about four-fifths were covered with cirrostratus and scud.
TUES.	Positive and tension moderately strong throughout the day. The max at 9h. a.m.	A thin fog was prevalent at the time of the occurrence of the max. tension.	Overcast at about 3h. a.m., and from 11h. a.m. to 4h. p.m.; at other times it was cloudless. A thin fog prevailed during the morning.
WED.	Positive and tension very weak from 3h. a.m. till 3h. p.m. At other times the tension was moderately active. The max. at 9h. p.m.	See General Remarks.	About one-fifth of the sky was generally covered with cirrostratus, fleecy clouds, and scud throughout the day. Slight haze and vapour prevailed during the morning.
THURS.	Positive till 1h. p.m. The tension was very strong at 1h. a.m. and 7h. a.m., and moderately active at other examinations. The max. at 7h. a.m.	See General Remarks. Snow was falling at this time.	The sky was overcast from 4h. a.m. till noon; and at about 7h. p.m., but it was cloudless a little before midnight. At other times it was generally about one-half covered with cloud. Snow was falling from 6h. 30m. a.m. till 8h. a.m.
FRI.	Positive and tension moderate from 7h. a.m. till 3h. p.m.; and also at 7h. p.m. At other examinations no electricity was shewn.	See General Remarks.	The sky was mostly clear till 3h. p.m., and overcast during the remainder of the day. The direction of the wind changed at 10h. a.m. from N.N.W. to S.S.W., and the temperature gradually rose after that time.
SAT.	Positive and tension very weak till 1h. p.m. Positive and tension moderately active from 3h. p.m. till midnight. The maxima at 3h. p.m., and 9h. p.m.	See General Remarks. A damp fog was generally prevalent.	Overcast throughout the day. Rain was falling heavily from 5h. a.m. till 9h. a.m. The wind was blowing in gusts varying from 3lbs. to 43lbs. pressure on the square foot, from 5h. a.m. till 6h. a.m. A damp fog was prevalent in the afternoon and evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The max. thermometer was taken away on Wednesday for the repair of the glass tube in which it is enclosed. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 27°9; and the mean reading at 7h. 30m. P.M., was 32°8; the mean readings at the Royal Observatory for the same times were 27°2 and 31°3 respectively.

† The directions of the wind during the week has been generally N.W. and S.W.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, December 26th, 1846.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 51.  
(The tabular abstract on the first page is for the week ending Saturday, Dec. 28th. The following selection of cases is made from the returns for the week ending Dec. 19th.)

## RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Burns and Scalds:—	duration
In Guy's Hospital, labourer, 22, falling from a platform at Belvidere Road, whilst unloading gravel from a barge—most probably fracture at the base of the skull, and injury to the brain	2 hours	M. 84, fracture of the neck of the femur (no inquest—an imperfect return)	*	In Charing Cross Hospital, M. 4 mon., burn of the legs, chest, and arms; found in a cradle in flames—no evidence how the cradle took fire—he was left by his mother in the room with another child 2 years old—there was a fire in the grate, without a guard	2 hours
In Guy's Hospital, painter, 67, locked jaw, caused by a compound fracture of his right leg, by a fall from a ladder, whilst painting a ceiling at Marlborough House, Peckham	12 days	In Guy's Hospital, engine driver in a factory, 34, shock to his system, caused by injuries to his chest, left arm, left hand, and head, by being caught in a steam engine in a factory in the Old Kent Road, whilst adjusting the machinery	5 days	In Charing Cross Hospital, F. 8, burn of the face and body—clothes took fire from a fire in the grate, when endeavouring to reach the mantel-piece	16 hours
In Guy's Hospital, labourer, 52, fracture of his ribs, wounding his lung, caused by slipping down in Billing-gate Market (post mort.)	1 week	M. 29, accident—contusion of the brain—inflammation of the brain (no inquest)	5 days	F. 3, burn—clothes caught fire at the grate, in the absence of the mother	*
M. 24 hours, a fall on the floor from the womb, being born unexpectedly at the full time (a first child).	*	Wounds:—	*	In Guy's Hospital, son of a news-vender's clerk, 3, accidentally burnt by his clothes taking fire	*
M. 63, accidental death from a fall, and injury of the head (erysipelas)	6 days	Map-mounter, 45, suicide with a razor, by cutting his throat (insane)	*	In Guy's Hospital, labourer, 20, burnt by falling into some slaked lime, in a fit of epilepsy, at Peckham	3 weeks
Labourer, 32, effects of concussion of the brain, producing apoplexy, from a fall down stairs a few min.	*	M. 21, mortification from being accidentally wounded in the thigh by a pistol shot, fired by himself	13 days	In Guy's Hospital, daughter of a tailor, 8, burnt by her pinafore taking fire, whilst blowing the fire with a bellows (at Rodney Buildings, New Kent Road)	12 days
F. 75, debility—accident from a fall in the street (no inquest)	18 days	M. 3, exhaustion from hemorrhage from leech bites (post mort.—no inquest)	*	In Guy's Hospital, wife of a stonemason, 24, tetanus from burns, caused by falling on the fire in a fit of epilepsy (at Green Street, Southwark)	3 weeks
In St. Thomas' Hospital, labourer about 26, erysipelas and gangrene, brought on by a contusion of his left foot, caused by a barrel falling on it, at Beale's Wharf, Tooley St.	10 days	Drowning:—	*	Wife of a Collector of Poor Rates, 58, burns from falling accidentally against a fire grate, while cooking	18 hours
In Guy's Hospital, excavator, 34, extravasation of urine into the peritoneum, caused by fractured pelvis and ruptured bladder, from a quantity of earth falling on him, on a new line of railway at Horselydown	8 hours	M. 19, drowned in the ornamental water, St. James' Park—fell through the ice, in going to the assistance of others who had fallen in—under water about 3 minutes.	*	M. 1, {teething effusion of water in the brain	1 month 3 days
In St. Thomas' Hospital, brewer's drayman, 34, rupture of the spleen and liver, by the wheel of a dray on which he was riding and from which he fell, accidentally passing over him (post mort.)	about 6 hours	F. newborn, found dead in the waters of the Tames, off Alderman's Stairs.	*	M. 1, {scald by boiling water over a slight extent of chest and left arm (no inq.) Daughter of a commercial clerk, 1, accidentally scalded with hot coffee on neck, chest, and back	3 days 11 days
In Guy's Hospital, milk carrier, 15, inflammation of the brain, arising from the fracture of his skull, by the kick of a horse, from which he accidentally fell (post mort.)	about 3 weeks	M. about 40, unknown—no marks of violence sufficient to cause death—no proof by what means he came into the water of the River Tames.	*	M. 4, scald of the arms and body—fell over a can of hot water in the nursery, when running playfully to his nurse	30 hours
An engraver (formerly), 48, erysipelas of the head and face, from an injury of the forehead, caused by falling from a cab box, when intoxicated	2 days	Suffocation:—	*	In Guy's Hospital, daughter of a clerk, 2, accidentally scalded by a jug of boiling coffee, which she was attempting to drink	2 weeks
Labourer in a colour manufactory, 77, accidentally crushed between a millstone called an "edge runner" and a wall, causing a mortal crush of the head	10 minutes	Excavator, 50, accidentally suffocated by a fall of earth, in forming a drain.	*	Poison:—	*

## CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.		duration
At No. 15, Dacre Street, Westminster, wife of a jobbing carpenter, 70, want of the common necessities of life—had lived in a destitute state for about . . . . .	7 months	M. about 40, apoplexy . . . . . 30 hours
M. 6 wks., natural death from pining for want of his mother's milk . . . . .	*	M. 16 days, premature birth—natural death—general debility—in capable of taking sufficient nurture. . . . . *
M. 10 wks., want of sufficient nourishment—(post mort.) . . . . .	*	M. 6 mon., natural death—decline . . . . . *
M. 64, natural death, accelerated by want . . . . .	*	M. 77, natural death—disease of the heart—instanter . . . . . *
F. 52, natural death from diseased heart . . . . .	*	M. 9 wks., natural death—convulsions . . . . . 6 hours
M. 35, serous apoplexy (post mort.) . . . . .	*	F. 35, natural death—apoplexy (3rd attack) . . . 1 hour
F. 66, suddenly from natural causes—supposed affection of the heart . . . . .	*	M. 62, natural—not under medical treatment—suddenly became insensible, and died in 3 1/2 hours. . . . . *
M. 70, natural death—sudden—from rupture of a blood vessel of the lungs. . . . .	*	In St. Thomas' Hospital, labourer about 40, rupture of a blood vessel in the lungs died in a few min. . . . . *
F. 62, natural death—sudden—from a diseased heart . . . . .	*	F. 38, natural—not under medical treatment—symptoms of disease in the chest . . . for some months
F. 12, diseased heart—died instantly . . . . .	*	F. 1 mon., natural—not under medical treatment—had occasional convulsions . . . . . *
F. 6 wks., natural—most probably from convulsions. . . . .	*	F. 26, inflammation of the womb and bowels 3 days after confinement, and not treated energetically by medical appliances . . died in 4 days
		F. 77, natural—asthma—not under medical treatment . . . . . *
		M. about 50, natural congestion of the brain (post mort.) . . . . . about 15 minutes
		M. newborn, effusion of blood on the brain, supposed to be caused during labour—no marks of violence (post mort.) . . . . . *
		M. 5 mon., natural—bad a cold—not under medical treatment . . . . . *
		M. 1, exhaustion from cholera—not treated medically . . . . . 19 hours
		M. 1, effusion into the chest from inflammation of the pleura—long affected with disease in that cavity . . . . . *
		M. 75, natural—not under medical treatment—had symptoms of asthma—suddenly became insensible, and died instantly. . . . . *
		M. 68, natural death from diseased heart . . . . . *
		F. 59, natural—not under medical treatment—complained of disease of the liver . . . . . for years

## CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE HELD) IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

CORONERS' RETURNS, IN WHICH (ALTHOUGH INQUESTS WERE MADE) NO CAUSE OF DEATH WAS DISCOVERED, OR CAUSES THE PERSONS DIED.			duration
M. 66, natural—not previously ill .....	duration	M. 5 mon., found dead in bed, without marks of violence.....	duration
M. 75, not under medical treatment .....	"	M. 66, natural death—cause not ascertained..	"
		F. 1, natural death—previous cause not known	"
		M. 77, found dead, without marks of violence	"

NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending December 18th; for all returns in which it is named, though in complication with other forms of disease, have almost without exception been classed under this epidemic.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 50; disease of the heart, 11; apoplexy, 3; intemperance, 2; privation, 2; other specified causes, 21; "found dead," "natural death," "visitation of God," &c., 30.—TOTAL, 119 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 38.

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

<b>St. George's H.:</b>		<b>Fever H.:</b>		<b>London H. (continued):</b>	
M. 33, lumbar abscess	duration	peritonitis	about 3 weeks	M. 40, suffocative catarrh.	16 weeks

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension weak at each examination during the day.	See General Remarks.	The sky was generally covered with cirrostratus and scud throughout the day. From 1h. p.m. to 3h. p.m. cirri and cirrocumuli were prevalent. A thin rain fell in the morning.
MON.	No electricity was shewn till 9h. a.m., when it was negative with moderate tension. At 3h. p.m. and 7h. p.m. the electricity was positive with moderate tension.	Rain was falling heavily at 9h. a.m. See General Remarks.	Overcast with rain falling frequently till 2h. p.m.; during the remainder of the day the sky was about one-half covered with cirrostratus, fleecy clouds, and scud. The wind was blowing in gusts varying from 3lbs. to 4lbs. pressure on the square foot, from 3h. a.m. till noon.
TUES.	At 9h. a.m. and 11h. p.m. the electricity was positive with moderate tension. At other times during the day nothing was shewn.	See General Remarks.	A large proportion of the sky was covered with cirrostratus and haze throughout the day. In the afternoon cirri were prevalent.
WED.	Positive with moderate tension at 1h. a.m. Negative with strong tension from 2h. a.m. till 9h. a.m. Sparks were frequently shewn. Positive with moderate tension during the remainder of the day.	Rain falling heavily. Rain and snow falling.	Overcast with cirrostratus and dense scud throughout the day. Rain was falling heavily from 3h. a.m. till 9h. a.m., and occasionally in the afternoon. Snow commenced falling at 11h. p.m., and continued till midnight.
THURS.	Positive with moderate tension at 1h. a.m. Nothing was shewn from 3h. a.m. till 8h. a.m. During the remainder of the day moderate. Positive electricity was shewn.	Snow falling. See General Remarks.	The sky was generally covered with cirrostratus and dense scud throughout the day. Snow was falling frequently from 1h. a.m. till 8h. a.m.
FRID.	Positive and tension moderate at each examination during the day.	See General Remarks.	The sky was one-half covered with cirrostratus, scud, and fleecy clouds till 1h. p.m. During the remainder of the day the sky was cloudless.
SAT.	Positive throughout the day. The tension was strong during the afternoon and evening. The maximum at 11h. p.m.	A fog was prevalent during the afternoon and evening.	With the exception of small portions of cirrostratus and vapour at various times in the morning and during the afternoon, the sky was cloudless throughout the day. A fog was prevalent in the evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The max. thermometer was taken away on Thursday for the repair of the glass tube in which it is enclosed. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 36.3; and the mean reading at 7h. 30m. P.M., was 36.2; the mean readings at the Royal Observatory for the same times were 35.9 and 35.4 respectively.

† The mean direction of the wind for the first three days was S.W., and for the remainder of the week N.

A TABLE OF

# Births and Deaths registered in London,

During the Week ending Saturday, January 2nd, 1847.

ANNUAL SERIES VIII.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.										[No. 1.

5 Winters.													
Weekly Average derived from Deaths of 1841-2-3-4-5, and corrected for Increase of Population to the middle of 1846.					Males .....	542	Deaths registered in the Week	Males .....	759	Births registered in the Week	Males .....	861	
					Females .....	526		Females .....	751		Females .....	789	
					Total	1068		Total..	1510		Total..	1650	
Deaths registered in this the first week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—													
(1840)	(1841)	(1842)	(1843)	(1844)	(1845)	(1846)	(1847)	(average of the series of weeks, exclusive of the last) 1072					
967	1191	971	869	933	1417	1153	1510						

\* The age of 1 person, whose death is assigned to violence, is not stated.

NOTE.—The present table contains births and deaths in the *sub-district* of Hampstead; also those in the *sub-districts* of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, now added for the first time. The last five sub-districts form the DISTRICT OF LEWISHAM. The whole increase arising from these additional returns, amounts to 33 births and 17 deaths for the present week.

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

<b>St. George's H.:</b> —duration		<b>Small Pox H.:</b> —No deaths registered.		<b>St. Thomas' H.:</b> —duration	
M. 43, diffuse cellular inflammation of the leg	15 months	<b>King's College H.:</b> —No deaths registered.		M. 40, pleuro-pneumonia—bronchitis	•
M. 35, { diabetes mellitus ..... probably	9 days	<b>St. Bartholomew's H.:</b>		M. 43, pneumonia	•
low pneumonia	•	M. 26, phthisis	•	M. 45, suppuration within the abdomen, probable	•
foul abscess in the left lung (p.m.)	•	M. 40, disease of the kidney	•	M. 39, { bronchitis ..... of long duration	•
inflammation of the testicle	•	M. 34, disease of the liver	•	old injury to leg	•
abscess of the scrotum	•	M. 35, disease of the heart	•	F. 30, { phthisis	•
pneumonia	•	M. 22, phlebitis	•	menorrhagia	6 months
no history of the case could be obtained	•	M. 19, { strangulated hernia	•	F. 33, typhus fever	•
—she died within a few hours after admission.	•	operation	•	<b>Dreadnought H.:</b>	
F. 28, acute rheumatism	•	peritonitis	•	prolapse after dysentery	•
<b>Westminster H.:</b>		M. 37, abdominal abscess	4 months	excision	2 weeks
M. 31, (cause of death unknown)	•	F. 19, scarlatina anginosa	•	erysipelas	6 days
M. 47, bronchitis	•	<b>London H.:</b>		ulceration of large and small bowels	•
F. 23, morbus cordis	•	M. 19, hæmatemesis	•	with hæmorrhage, (post mort.)	•
<b>Charing Cross H.:</b>		M. 36, diseased foot	•	M. 27, { peripneumonia notha	7 days
M. 39, rheumatic fever	2 or 3 months	M. 30, diabetes, insipid.	•	emphysema	•
<b>Middlesex H.:</b>		<b>Guy's H.:</b>		phthisis	3 months
M. 18, (not yet reported)	•	M. 16, consumption	•	M. 51, { pleuropneumonia (right)	12 days
F. 65, emphysema—bronchitis	•	M. 5, diseased heart—dropsy	•	cavities in right lung (post mort.)	•
F. 54, cancer mammae	•	M. 48, phthisis	•	<i>See Return of Unité Convict Hospital Ship in the lists of Coroners' cases.</i>	
<b>University College H.:</b> —No deaths registered.		F. 1, convulsions	•		
<b>Fever H.:</b> —No deaths registered.		F. 60, pneumonia—bronchitis	•		
		F. 38, diseased heart—dropsy	•		

## DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

<b>Small Pox:</b> —duration		<b>Typhus (continued):</b> —duration		<b>Diabetes:</b> —duration	
M. 18 mon., { confluent small pox	about 11 days	F. 8, { fever	13 days	<i>See Hospital Returns.</i>	
bronchitis	•	{ pneumonia	6 days	<b>Stone:</b>	
had not been vaccinated,	•	M. 4, synochus—typhus and effusion in the cavities	•	No deaths registered from this cause.	
M. 19, { confluent small pox	9 days	F. 4 mon., fever	5 days	<b>Childbirth:</b> —The time elapsing from commencement of labour to death should invariably be returned.	
second attack—vaccinated in infancy.	•	M. 41, { typhus	24 days	F. 40, puerperal fever	5 days
<b>Diarrhœa:</b>		{ bronchitis	16 days	F. 32, { in labour (12 hours)	•
F. 10 weeks, bowel complaint	•	pneumonia	5 days	arachnitis	36 hours
M. 9 days, diarrhœa	4 days	M. 21, fever	3 weeks	F. 40, { birth of a still-born male child	•
F. 14 days, bowel complaint—debility—convulsions	14 days	M. 20, typhus fever	•	supposed laceration of the uterus	•
M. 6 mon., diarrhœa	4 days	F. 12, { diarrhœa	3 weeks	F. 24, puerperal fever, 7 days after confinement	•
M. 86, natural oedema from age—diarrhœa, 1 month	•	febris	2 days	F. 29, uterine hæmorrhage after delivery	•
F. 90, diarrhœa (and age)	•	M. 62, low fever (gastric)	2 months	F. 31, childbirth	14 hours
F. 8 mon., diarrhœa from dentition	•	F. 101, { common fever	3 weeks	F. 30, premature labour—hæmorrhage	10 days
M. 10 weeks, diarrhœa	3 weeks	general debility with diarrhœa	•	F. 28, puerperal mania	12 days
M. 73, diarrhœa	•	M. 68, typhus fever	14 days	F. 22, peritonitis supervening on parturition	7 days
F. 45, diarrhœa	•	F. 64, typhus	8 days	lying in	7 days
M. 73, diarrhœa	1 week	F. 71, old age, and low typhus fever	8 days	F. 22, { puerperal peritonitis	3 days
M. 1 month, diarrhœa	10 days	F. 69, old age, and low typhus fever	•	childbirth	•
M. 11 weeks, diarrhœa	1 month	F. 1, fever	10 days	F. 32, { difficult labour and exhaustion	•
M. 14, diarrhœa	•	M. 18, typhus fever	•	placenta presentation and hæmorrhage, (post mort.)	3 weeks
F. 4 mon., { deficiency of nourishment	4 days	M. 56, fever	•	F. 27, { childbirth	5 days
diarrhœa	•	F. 5, fever—convulsions	•	puerperal fever	3 days
F. 1, { bronchitis	4 days	F. 19, typhus fever	•	F. 35, puerperal peritonitis	4 days
diarrhœa (post mort.)	•	M. 35, typhus fever	10 days	F. 38, inflammation of the lungs from cold, after her confinement	•
F. 1 mon., diarrhœa	1 week	F. 62, typhus	•	constipation	•
<b>Dysentery:</b>		F. 2, fever—hæmorrhitis	14 days	F. 35, { puerperal apoplexy	•
<i>See Dreadnought Hospital Returns.</i>		M. 18, fever	1 week	delivered	24 hours before death
<b>Other cases of diarrhœa not assigned to this head in abstract:</b>		M. 2, typhus fever	•	childbirth	5 days
{ strumous tuberculation of lungs	10 weeks	M. 16, common inflammatory fever	•	F. 44, { 3 or 4 days after a fall between 5th and 6th months of pregnancy—accompanied by hæmorrhage—subsequently fever and exhaustion.	•
and abdomen	1 week	M. 37, typhoid fever	14 days		
M. 10 mon., { diarrhœa	10 weeks	M. 16, typhus fever	2 weeks	<b>Delirium tremens:</b>	
F. 60, { apoplexy	6 years	<i>See above.</i>		M. 57, delirium tremens	4 days
diarrhœa	12 days	<b>Remittent Fever:</b>		M. 31, delirium tremens	8 months
M. 42, phthisis—diarrhœa	1 year	M. 2, bilious remittent fever	8 days	F. 38, delirium tremens	2 months
M. 8, { phthisis	2 months	<b>Syphilis:</b>		F. 57, delirium tremens—exhaustion	•
diarrhœa	1 weeks	F. 26, syphilis—ulceration of intestines	4 months	<b>Intemperance:</b>	
F. 62, diarrhœa—necrosis tibiae	•	<b>Hæmorrhage:</b>		No deaths registered from this cause	
M. 5 mon., eczema—diarrhœa	several weeks	F. 69, hæmorrhage	•	<b>Privation:</b>	
disease of the mucous lining of the	•	F. 1, general hæmorrhagic diathesis—discharge of blood from nose, ears, bowels, and from pustules in the neck and hip—catarrh	•	No deaths registered from this cause.	
howels	•	<i>See Coroners' Returns.</i>		<b>Lodging in crowded apartments:</b>	
diarrhœa	•	<b>Malformation:</b>		bronchitis	7 years
F. 57, { diarrhœa	14 days	F. 3 days, cyanosis	•	last attack	5 days
paralysis	•	M. 13 days, cyanosis	•	the condition of deceased was rendered much worse from being one of 11 persons living, cooking, and sleeping in 2 rooms 9ft. square, in a close court in St. James', Clerkenwell.	
M. 73, { diarrhœa (progressive)	•	M. 8 mon., malformation and gradual decay, from the birth.	•	F. 69, { bronchitis following pertussis	4 months
debility from age.	•	<b>Hernia:</b>		last attack	7 days
<b>Hepatitis and Cholera:</b>		F. 48, { femoral hernia (right side)	20 years	teething. One of the 11 persons mentioned above.	•
F. 67, hepatitis chronic—cholera	•	strangulation	4 days		
<b>Typhus, &amp;c.:</b>		operation—inflammation (post mort.)	4 days		
M. 56, typhus fever	8 weeks	M. under 1, rupture of the navel	•		
F. 31, typhus	14 days	M. 15, { strangulated hernia	24 hours		
F. 29, fever	15 days	operation	30 min.		
F. 13, fever	2 weeks	M. 69, hernia	4 days		
M. 39, fever—inflammation of the lungs	12 days	{ pneumonia	12 days		
M. 12, { febris	2 weeks	cerebral effusion	1 day		
hydrocephalus	10 weeks	congenital hernia	•		
F. 65, typhus	•	F. 69, strangulated femoral hernia (post mort.)	7 days		
F. 3, inflammation—fever	•	F. 66, { femoral hernia	12 days		
F. 50, fever—chronic bronchitis—diseased liver	•	enteritis	•		
F. 5, typhus fever	14 days	<i>See Returns of Coroner, and of St. Bartholomew's Hospital.</i>			
M. 60, paralysis—typhus	•				
F. 10, bilious fever	7 days				
F. 36, continued fever	•				
M. 35, brain fever—effusion in the brain	•				

## RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

<b>F. 40, cancerous stricture of the colon</b>		<b>duration</b>		<b>M. 40, dropsy of the pericardium</b>		<b>duration</b>	
{ chronic bronchitis		10 years		rheumatism		11 months	
{ dilatation of right ventricle, with softening.		5 years		M. 43, { pericarditis		3 weeks	
acute bronchitis		14 days		epileptic convulsions		8 days	
pneumonia		6 days		F. 70, { emphysema of the lungs		6 hours	
M. 57, phthisis pulmonalis		1 year		bronchitis		3 weeks	
M. 66, chronic bronchitis—hypertrophy of left ventricle		•		congestion of the lungs		1 day	
F. 37, asthma and pneumonia		•		M. 73, { effusion on the brain		3 weeks	
{ pneumonia		7 days		paralysis		•	
M. 1, { anasarca		4 days		M. 13, tubercular meningitis		•	
congested kidneys		•		{ dropsy—bronchitis		7 years	
				partial paralysis		3 weeks	
				hypertrophy of the heart—nephria		•	
				M. 3 mon., pneumonia		3 days	

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 2nd January, 1847.

Day.  —  1846	Phases  of the  Moon	Mean height of the Barometer, from 12 observations to (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers								Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning	
			Dry			Dew Point Mean from 12 Rts	Highest in the sun, as shown by a self-register- ing thermometer	Lowest on the grass, as shown by a self-register- ing thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning	Highest	Lowest	Mean of 12 Diffs. DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	The electricity was slightly positive during the morning, but nothing was shewn at any other times.	See General Remarks.	The sky was principally covered with cirrostratus, scud, and fleecy clouds throughout the day.
MON.	Positive and very active throughout the day.	See General Remarks.	With the exception of a short time about 11h. a.m., when the clouds were slightly broken, the sky was covered with cirrostratus and scud throughout the day. A fog was prevalent in the morning.
TUES.	Nothing was shewn till 6h. a.m. Positive and very active from that time till 6h. p.m., and slightly positive during the remainder of the day.	See General Remarks.	Overcast with cirrostratus and dense scud till 6h. a.m. The clouds were extensively broken from this time till after noon, when the sky again became overcast, and remained so.
WED.	Positive but very weak till 3h. p.m., but positive with tension very strong during the remainder of the day.	See General Remarks.	Overcast with cirrostratus and scud till 9h. p.m. Before 10h. p.m. the sky became suddenly cloudless, and remained so till midnight. The barometer reading was exceedingly high throughout the day. The maximum occurred at 9h. 42m. a.m.
THURS.	Positive and tension strong, except from noon till 6h. p.m., when it was positive but weak.	See General Remarks.	Cloudless till 4h. p.m. At 5h. p.m. a large portion of the sky was covered with cirrostratus and fleecy clouds, and it became quite overcast at 6h. p.m., and remained so till midnight.
FRID.	Positive and tension moderate at every examination.	See General Remarks.	The sky was generally overcast with cirrostratus and fleecy clouds throughout the day. Snow was falling occasionally during the afternoon.
SAT.	Positive but very weak at each examination.	See General Remarks.	Generally overcast throughout the day.

The height of the eistem of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The thermometer placed in the full rays of the sun, was out of order the greater part of the week.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer was out of order during the week.

The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day, from December 28th to Jan. 1st, inclusive, at 6h. 30m. A.M., was 28.4; and the mean reading at 7h. 30m. P.M., was, from Dec. 28th to Dec. 31st, inclusive, 32.0; the mean readings at the Royal Observatory for the same times were 26.4 and 29.6 respectively.

† The air was generally calm throughout the week.

On Jan. 1st the regular observations were discontinued for the purpose of examining the adjustments of the magnetic and meteorological instruments. A few barometrical readings are taken daily, so as to give an approximation to the mean height: the maximum and minimum temperature of each day are also taken, by means of self-registering thermometers, and inserted as the highest and lowest readings each day, and their arithmetical mean is taken and considered to represent the mean daily readings.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, January 9th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 2.]

\* The age of 1 person, whose death is assigned to privation, is not stated.

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 14 births and 17 deaths.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 1.

(The tabular abstract on the first page is for the week ending Saturday, Jan. 9th. The following selection of cases is made from the returns for the week ending Jan. 2nd.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation (continued):—	duration
In Middlesex Hospital, F. 2, fall on the head from a second floor window, while listening to a street organ	4 hours	M. 27 (no inquest), injury of the right knee. 9 weeks (How caused?)		F. 5 mon., found dead, apparently from suffocation—how caused unknown.	
In Middlesex Hospital, F. 60, (post mort.) fracture of the base of the skull, from falling down stairs while drunk	3 weeks	In London Hospital, mast maker, 21, accidental from a fractured skull, by a blow from a winch	died on the same day	Daughter of a tailor, 3 wks., suffocation by being accidentally shut up in a turn-up bed instant	
M. 35, fracture of the spine by falling from a window, out of which he had suddenly got, while insane	17 days	In London Hospital, labourer, 28, rupture of intestines by a kick—manslaughter against John Duggan		M. 10 wks. (post mort.), suffocation by being accidentally turned over and laid on by another child.	
In King's College Hospital, tailor, 50, effusion of blood on the brain—fell in King Street, Long Acre, when intoxicated—head struck the pavement	20 hours	In King's College Hospital, widow, about 70, (post mort.)—fracture of the base of the skull—no evidence how caused		In Middlesex Hospital, M. 60 (post mort.), suffocation from the lodgment of bone at dinner in the gullet—refused an operation 9 days	
In King's College Hospital, labourer, 38, (post mort.), fracture of the 4th dorsal vertebra—stepped upon and fell with a piece of quarterming casually placed on the beams for removal, when at work in Covent Garden Theatre	5 days	In London Hospital, gatekeeper, 78, dislocated arm and fractured radius—bow caused unknown		F. 1, accidental death from choking	
In St. Bartholomew's Hospital, potman, 58, (post mort.)—concussion of the brain, caused by falling down stairs (at the City Road).	13 hours	Wounds:—		Burns and Scalds:—	
In St. Bartholomew's Hospital, surgical splint maker, 55, effects of a fractured leg, from a fall at Gray's Inn Lane, while wrestling—(previously paralysed).	8 weeks	Perfumer, 39, suicide with a razor, in unsound mind		In Middlesex Hospital, F. 3, burns from playing in her bedgown with a stick, lighted at the grate (the mother being absent)	3 days
In St. Bartholomew's Hospital, labourer, 18, effects of a fractured arm by a fall, from a ladder slipping (at Hornsey)	11 days	M. 54 (no inquest), traumatic trismus (how caused?)	24 days	In Middlesex Hospital, F. 7, burns from her clothes catching fire, while sitting on a fender-edge; a red-hot poker falling on them in absence of the father	1 day
In London Hospital, tidewater (age unknown), accidental from an injured leg, by a fall of cutch	70 days	M. 46, cutting his throat in a fit of temporary insanity		In Middlesex Hospital, M. 6, burns from firing his pinafire with a lighted stick at play	1 day
Wife of a waterman of horses, 39, concussion of the brain, from falling down the area of an unminished house, hot fenced.	instant	Drowning:—		In St. Bartholomew's Hospital, daughter of a cigar-stripper, 1, burnt by her pinafire taking fire, whilst at paper (at Milton Street)	1 week
Wife of a hair dresser, about 60 (post mort.), apoplexy—fracture of the skull—fell down stairs when intoxicated—found insensible at the foot of the stairs—supposed about.	10 hours	M. about 30, accidentally drowned in the River Thames.		In London Hospital, son of a labourer, 4, accidental from burns by his clothes taking fire	1 day
F. 87, exhaustion following an accidental fall in her bedroom (while affected with dropsy).	5 weeks	M. 6, found dead in "New Cut"—apparently drowned—with marks (missing a week).		In London Hospital, son of a policeman, 5, accidental from burns by his clothes taking fire	1 day
F. 77, natural death from apoplexy, accelerated by a fall.		M. 17, found dead in the water of the Regent Canal basin, without marks.		In London Hospital, son of a labourer, 7, accidental from burns	
Labourer, 25, fracture of the skull from a blow, accidentally received from the falling of the sheers in Her Majesty's Dockyard, Deptford	5 hours	Captain of a coal ship, 52, (post mort.), found dead, apparently drowned, the membranes of the brain being congested—without marks of violence.		In London Hospital, widow, 72, accidentally burnt by her clothes taking fire	
In Middlesex Hospital, M. 81, injury of the head from a cart wheel, as he was crossing the road intoxicated	5 days	M. 20, accidentally drowned by a fall from a boat in the River Thames.		In London Hospital, F. 6, accidental from burns by her clothes taking fire	
In Middlesex Hospital, M. 62, fracture of the thigh from the kick of a horse, which he was cleaning	16 days	M. (unknown), apparently 14, found dead in the River Thames, without marks.		In London Hospital, daughter of a sugar-baker, 4, accidental from burns	8 days
In Middlesex Hospital, M. 30, arachnitis from injury of the skull, by a horse's kick on the forehead, while moving hay beneath him	4 days	F. 23, found dead—apparently drowned, and without marks to account for death.		F. 30, burns from firing her clothes by letting fall on them a lucifer match	
In King's College Hospital, cabinet maker, 80, (post mort.)—shock of the system, following fracture of the neck of the femur, by sudden muscular exertion, when endeavouring to avoid a backney cabriolet in High Holborn	10 days	Lighterman, 49, found drowned—but no evidence how he got into the water.		Son of a blacksmith, 3 (no inquest), severe burns on the left arm and shoulder, by lighting a piece of paper at the fire grate	3 weeks
F. 83, shock of the system—thrown out of a chaise-cart, which came in contact with a coal cart in the Strand	6 days	F. 24, found drowned—but how she came into the water no evidence (in the Thames).		F. 4, burns from reaching to an ornament on a mantelpiece, in the absence of the nurse	8 days
Carman, 47, injuries from being accidentally run over by his own cart	instant	Waterman, 24, drowned accidentally by falling into the River Thames (under water 18 hrs.)		M. 26, accidentally burnt to death (an imperfect return)	
Daughter of a mariner, 15, death from blows, producing plemisy on right side; verdict of manslaughter against Richard King the younger, Sarah Green, and Jane Sumner.		Spinster, 26, drowning—no evidence how she came into the River Ravensbourne.		Son of a labourer, 1, injuries from being scalded with boiling water from the kettle upsetting accidentally	21 hours
M. 65 (post mort.), natural death—sudden, from effusion of serum on the base and ventricles of the brain, which may have been accelerated by an accidental blow		M. 43, accidentally drowned in the River Thames (under water 32 days).		M. 2 (no inquest), scald—bronchitis	
F. 83, { fracture of the back and thigh (no inquest.) { (how caused?)	19 days	Hanging and Suffocation:—		M. 4, scald of the back from accidental splashing of boiling water over him	5 weeks
		Tailor, 57, suicide by hanging—insane.		Poison:—	
		F. servant (single), about 25, suicide by hanging (state of mind not known).		F. servant, 19, suicide with prussic acid, in unsound mind—quantity taken not known	6 hours
		Soldier, 22, suicide by hanging (insane).		F. servant, 28 (post mort.), suicide with laudanum (insane).	
		In Westminster, convict, formerly a labourer, 16, hung himself with tailors' thread to the air grating of his cell, when in separate confinement (temporary insanity, arising from disappointment at not being allowed to return to the juvenile ward, from which he had been removed)—found hanging.		F. 25, { arsenic (had bought twopennyworth for mice) { suicide after desertion by a paramour—insanity.	28 hours
		In Westminster, convict, formerly a labourer, 45, hung himself with a rope to the beam of a loom in his cell (temporary insanity).	instant	Spirituous Liquor:—	
		F. 16, hanging herself with a cord to a leaden pipe (her feet being off the ground about 30 minutes).		Cooper, 31 (post mort.), died from an excessive draught of ardent spirits—how administered unknown (insane).	
		F. 70, hanged herself in a temporary state of insanity.		M. 30, { died from an excessive draught of strong liquor, imbibed into his stomach { The verdict adds—"cause unknown."	2 days
		Grocer, 45, hanged himself in a temporary state of insanity.		Neglect:—	
		M. 55, { bronchitis { congestion of the lungs, from (no inquest) { inhaling a narcotic vapour	13 years 7 days	M. newly born, neglect to provide proper aid at birth, and so wilfully murdered by some person or persons unknown.	
		Son of a gardener, 2, inhaling steam from a kettle of boiling water	12 hours		

THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:	duration	Small Pox H.:	duration	London H. (continued):	duration
M. 16, { diseased heart (sequel of rheumatism) . . . . .	8	M. 20, small pox—natural—confluent . . . . .	8 days	F. 49, ulcer . . . . .	8 months
(p.m.) { fever (died suddenly) . . . . .	2 years ago	King's College H.:		F. 40, { dropsy . . . . .	
{ rheumatism, first attack . . . . .	about 3 weeks ago	M. 37, debility . . . . .	2 weeks	{ mitral disease of the heart . . . . .	
M. 31, { scalp wound—erysipelas . . . . .		F. 63, { femoral hernia . . . . .		F. 33, diseased uterus . . . . .	
(p.m.) { secondary abscess of lungs . . . . .		F. 32, { strangulation . . . . .	2 days	St. Thomas' H.:	
Westminster H.:		F. 32, { operation . . . . .		F. 30, fever . . . . .	
M. 48 (post mort.), acute bronchitis . . . . .	1 month	F. 32, erysipelas . . . . .		F. 26, phthisis . . . . .	
M. 40, chronic bronchitis . . . . .		F. 32, bronchitis . . . . .		F. 39, carcinoma uteri . . . . .	
Charing Cross H.:		See Violent Deaths.		F. 58, { apoplexy . . . . .	13 days
M. 20, phthisis pulmonalis . . . . .	2 or 3 years	St. Bartholomew's H.:		{ hemiplegia . . . . .

University College H.:		M. 33, disease of the lungs and chest . . . . .		Guy's H.:	
M. 56, stricture of urethra—disease of kidneys . . . . .		M. 29, bronchitis . . . . .		M. 64, jaundice . . . . .	
F. 63, chronic laryngitis—phthisis . . . . .		M. 69, strangulated hernia . . . . .		M. 30, fever . . . . .	
Fever H.:		M. 41, emphysema, with bronchitis . . . . .	some years	M. 40, diseased bladder—enlarged prostate . . . . .	
M. 51, { fever . . . . .	19 days	M. 46, suspected disease of brain and spinal marrow . . . . .		M. 50, bronchitis—dropsy . . . . .	
(p.m.) { granular kidneys (from Holborn—in hospital 7 days) . . . . .		M. 25, consumption . . . . .	4 years	M. 52, diseased kidney . . . . .	
M. 40, { fever . . . . .	19 days	F. 21, emphysema of the lungs, with bronchitis, ill as long as she could recollect directly after admission to the hospital . . . . .		F. 29, phthisis . . . . .	
(p.m.) { injection of colon—serous effusion beneath the arachnoid (from Lambeth—in hospital 4 days) . . . . .		London H.:		Dreadnought H.:	
F. 53, { apoplexy . . . . .	19 days	M. 55 (inquest), natural—suppressed urine . . . . .		{ venereal erysipelatous inflammation of peritoneum . . . . .	24 hours
(p.m.) { clot in the fornix (from Lambeth—in hospital 12 days) . . . . .		M. 19 wks. (inquest), natural, sudden, from group . . . . .		{ sudden collapse . . . . .	in hospital 34 days
		F. 56 (inquest), natural—sudden, from effusion on the brain . . . . .	instantly	M. 28, { partial obstruction of small intestine 10 days perforation . . . . .	34 hours
				{ intrusion of a small portion of the calibre of the ilium into the femoral ring . . . . .	

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, IMPERANCE, PRIVATION, ETC.

Small Pox, &c.:	duration	Typus (continued):	duration	Delirium tremens:	duration
M. 9 mon., natural small pox . . . . .	14 days	F. 43, typhus fever . . . . .	6 days	M. 37, delirium tremens . . . . .	
M. 6 mon., { confluent small pox . . . . .		{ fever . . . . .	14 days	M. 31, delirium tremens . . . . .	4 days
{ vaccination 3 months before, without cicatrices . . . . .		{ disease of liver . . . . .		Paralysis and delirium tremens:	
F. 11 mon., { bronchitis . . . . .	7 days	See Hospital Reports.		M. 56, { paralysis . . . . .	11 days
{ variola . . . . .	8 days	Remittent Fever:		{ delirium tremens . . . . .	
{ not stated whether vaccinated . . . . .		F. 3, { remittent fever . . . . .	16 days	Intemperance:	
M. 4, { small pox, confluent . . . . .	11 days	{ pneumonia . . . . .	24 days	M. 33, phthisis from intemperate habits . . . . .	
{ pneumonia . . . . .	2 days	{ remittent fever . . . . .	14 days	F. 25 (inquest) p.m., sanguineous apoplexy, accelerated by intoxication—found dead in bed . . . . .	
{ not stated whether vaccinated . . . . .		F. 7, { abscess apparently of the Eustachian tube, which caused the rupture of a blood-vessel . . . . .		M. 40, { intemperance—fever . . . . .	2 weeks
F. 11 mon., { small pox . . . . .	11 days	Syphilis:		{ meningitis . . . . .	
{ pneumonia . . . . .	3 days	M. 6 mon., { syphilis . . . . .	from birth	Bronchitis and Intemperance:	
{ without previous vaccination . . . . .		{ bronchitis . . . . .	1 month	M. 52, a drunkard, { bronchitis . . . . .	3 years
F. 1, { chicken pox . . . . .	5 days	See Dreadnought Hospital.		{ last attack . . . . .	3 weeks
{ hydrocephalus . . . . .	3 weeks	Hæmorrhage:		Privation:	
See Small Pox Hospital.		F. 29, hæmorrhage from the lungs . . . . .	10½ hours	F. 25, { exhaustion from long refusal of food, 2 years insanity . . . . .	
Typhus, &c.:		F. 46, rupture of a blood-vessel on the lungs . . . . .		In the sub-district of Brompton, widow of a soldier, 56 (inquest), serous effusion into and congestion of the brain, from want of clothes to lie in at night, and inefficient nourishment with food, through poverty . . . . .	
M. 41, low fever . . . . .	16 days	M. 68 (inquest), rupture of a blood-vessel in the lungs . . . . .	2 minutes	In sub-district of St. Mary, Marylebone, needlewoman, 33 (inquest), want of food and other common necessities of life . . . . .	
F. 8, fever . . . . .	3 weeks	M. 4 days, hæmorrhage from the umbilical cord—debility . . . . .	4 days	In sub-district of St. John, St. Olave's, F. 86, (inquest) suddenly—exhaustion from want of sufficient nourishment . . . . .	
F. 48, typhus fever . . . . .	6 weeks	M. 72 (inquest), natural death—hæmorrhage from a ruptured vessel . . . . .	sudden	Inanition:	
F. 33, { bilious fever . . . . .	7 days	F. 41 (inquest), natural death—rupture of a blood-vessel on the lungs . . . . .	sudden	M. 7 weeks (inquest), (p.m.), defective nourishment—not known whether from disease or neglect—duration unknown—no medical attendant certified . . . . .	
{ cerebral congestion . . . . .	7 days	M. 40 (inquest), natural death—rupture of a blood-vessel . . . . .	sudden	Miscellaneous causes:	
F. 3, fever—effusion on the brain . . . . .		Malformation:		M. 2, inflammation—ulceration and sloughing of the groin and scrotum . . . . .	3 weeks
F. 70, fever . . . . .		F. 15 days, nonclosure of the foramen ovale, since birth . . . . .		F. 78, lupus . . . . .	15 years
M. 14, typhus fever . . . . .	8 days	F. 47 days, imperfect anus . . . . .		F. 18, malignant disease of the face (lupus) . . . . .	10 years
M. 11, fever . . . . .	3 weeks	M. 8 days, imperfect rectum . . . . .		F. 69, water brash . . . . .	5 years
M. 5 mon., brain fever . . . . .		Hernia:		M. 56 (p.m.), { apoplexy . . . . .	3 days
F. 2, { fever . . . . .	6 weeks	F. 70, strangulated hernia . . . . .	5 days	{ paralysis of left arm and right leg, ramollissement of the left middle lobe, and base of right . . . . .	
{ diarrhoea . . . . .	1 week	F. 88, strangulated hernia . . . . .		{ cancer of stomach and intestines . . . . .	
M. 3, typhus . . . . .	17 days	M. 3 mon., strangulated hernia . . . . .	2 months	{ softening of brain with paralysis—hemiplegia . . . . .	
M. 18 (p.m.) inquest, continued fever . . . . .	5 days	See Reports of King's College, and St. Bartholomew's Hospital.		M. 17 (inquest, p.m.), purulent arachnitis of the brain and spinal cord . . . . .	5 days
F. 45, fever—brouchitis . . . . .	whole illness 1 month	Diabetes:		F. 1 (inquest), softening of the brain—hepatization of the lungs . . . . .	for 6 weeks under a quack
F. 34, typhus . . . . .	3 weeks	F. 70, diabetes mellitus, ending in exhaustion from irritation of the mucous membrane, with vomiting and purging . . . . .	7 years	M. 1 (p.m.), convulsions—softening of brain and great congestion . . . . .	
F. 28, nervous fever . . . . .	2 months	Stone:—No deaths registered from this cause.		F. 40 (inquest), natural death—sudden from effusion of the brain from mortification of the lip . . . . .	
M. 18, typhus . . . . .	14 days	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.		M. 8 mon., abscess of ear discharging externally—collapse . . . . .	
M. 26, eruptive fever . . . . .	7 days	F. 24, { parturition of twins . . . . .	39 days	M. 68, { earache . . . . .	4 months
{ fever . . . . .	3 weeks	{ adynamic fever . . . . .	31 days	{ typhus fever . . . . .	7 days
F. 3, { congestion of brain . . . . .	5 days	F. 36, exhaustion after delivery . . . . .	3 weeks	F. 30 (p.m.), arachnitis—diminutive heart—atrophy . . . . .	12 years
{ effusion . . . . .	2 days	F. 27 (inquest), laceration of the womb, from pressure of the child in a mal-position, during natural labour . . . . .	30 min.	F. newly born (inquest, p.m.) it could not be ascertained whether the child was born alive; having been left by a stranger at an office, 12, Charles-street, Westminster . . . . .	
M. 4, gastric fever . . . . .	21 days	{ (inquest) childbirth (healthy) . . . . .			
M. 1, fever . . . . .	8 days	F. 28, { followed on fifth day by phlegmasia dolens . . . . .			
M. 24, fever . . . . .		F. 33, { childbirth . . . . .	7 days		
M. 1, brain fever . . . . .	7 days	{ puerperal fever . . . . .	2 days		
F. 1, low fever and marasmus . . . . .	10 weeks	F. 36, milk fever (9 days after confinement) . . . . .			
M. 47, fever . . . . .		F. 29, exhaustion of the vital powers—premature delivery . . . . .			
M. 73, { fever . . . . .	17 days	F. 24, puerperal mania . . . . .	11 days		
{ pneumonia . . . . .	8 days	F. 23, { pleuritis . . . . .	6 days

M. 26, low nervous fever and congestion of the blood vessels of the brain . . . . .					
F. 11, typhus mitior . . . . .	3 weeks				
M. 3, fever—hæmorrhage from the bowels . . . . .	3 weeks				
{ febris . . . . .	7 weeks				
M. 51, { debility . . . . .					
{ fever . . . . .	3 months				
M. 3, { meningitis . . . . .					
M. 7, typhus fever . . . . .	3 weeks				
M. 14 (inquest), natural death—convulsions—effusion on the brain, resulting from low fever . . . . .					
M. 11, fever . . . . .	3 weeks				
F. 3, { fever . . . . .	3 weeks				
{ effusion on the brain . . . . .					

In the return for week ending January 2nd, deaths were—

(1) Certified by Medical Attendant in . . . . .	1209 cases.
(2) Attested by Coroner in . . . . .	204 "
(3) Stated to have had no Medical Attendant . . . . .	30 "
(4) Not certified . . . . .	67 "

1510

Deaths under 1st and 2nd heads show a proportion of 93 per cent. It must be observed, that the term "certified" signifies, that in all cases to which it is applied a written statement of the cause of death (or that it could not be ascertained), was made by a qualified practitioner.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Deaths from bronchitis and pneumonia 7; asthma, 3; phthisis, 3; pulmonary apoplexy, 1; convulsions 9; epilepsy, 2; cerebral apoplexy, 12; rupture of vessels in lungs, 2; rupture of other vessels, 2; diseases of heart, 19; violence, 75; other specified causes, 28; found dead (young persons) 15, (adults) 7; visitation of God, natural causes, &c., 19—total 204. The number of cases in which it is recorded that a post mortem examination was made is 56.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 9th January, 1847.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at 2h. 40m. p.m.; at other examinations no electricity was shewn.	} See General Remarks.	The sky was one-half covered with cirri, cirrostrati, and scud to 9h. a.m.; from that time till 2h. p.m. the amount gradually increased, and it shortly after became overcast. At 4h. 50m. sleet began falling, and snow shortly after succeeded.
MON.	Positive and tension moderate at each examination during the day.	} See General Remarks.	Overcast with cirrostratus and scud throughout the day.
TUES.	Positive and tension moderate at 1h. p.m.; at other examinations the electricity was positive, with weak tension.	} See General Remarks.	With the exception of a few breaks in the clouds about 11h. a.m., the sky was covered with cirrostratus and scud throughout the day. Rain was falling between 9h. a.m. and 11h. a.m.
WED.	Positive and tension very weak at each examination during the day.	} See General Remarks.	Overcast with cirrostratus and scud throughout the day, with the exception of an interval at 3h. a.m. A fog was prevalent in the morning.
THURS.	Positive and tension strong from 11h. a.m. to 2h. p.m. Sparks were shewn.	} A thin misty rain was falling.	Overcast with cirrostratus and scud throughout the day. A thin misty rain was falling at 11h. a.m.
FRID.	Positive and moderately active at each examination during the day.	} See General Remarks.	Overcast with cirrostratus and scud throughout the day.
SAT.	No electricity was shewn till 1h. p.m. Positive and tension moderate from 1h. 20m. p.m. till midnight.	} See General Remarks.	Overcast with cirrostratus and scud till 10h. p.m. Shortly after this time the sky became suddenly cloudless, and continued so during several hours.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The thermometer placed in the full rays of the sun has been under repair during the week.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

• In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 39.5; and the mean reading at 7h. 30m. P.M., was 39.7.

† The mean direction of the wind for the week is S.E., but during a large portion of the time it has been calm.

During the week the regular observations were discontinued for the purpose of examining the adjustments of the magnetic and meteorological instruments. A few barometrical readings have been taken daily, so as to give an approximation to the mean height: the maximum and minimum temperature of each day has also been taken, by means of self-registering thermometers, and inserted as the highest and lowest readings on each day, and their arithmetical mean is taken and considered to represent the mean daily readings.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, January 16th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 3.]

Deaths in the districts added in 1847..... 17									

\* The age of 1 person, whose death is assigned to *privation*, is not stated.

NOTE.—The above return contains births and deaths which occurred in the *sub-district* of Hampstead; and in the *sub-districts* of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 18 births and 17 deaths.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination during the day.	See General Remarks.	With the exception of a few small breaks which occurred at 9h. 30m. a.m., the sky was overcast till 6h. p.m.; from this time till midnight the sky was clear. The prevailing clouds were cirro- stratus and scud. A thin haze prevailed during the night.
MON.	No electricity was shewn till noon, when it became positive, with strong tension: at every other time during the day it was slightly positive.	See General Remarks.	The sky was cloudless till 9h. p.m., when it became suddenly overcast, with dense cirrostratus, and continued so till midnight.
TUES.	Positive and moderately strong tension at 9h. a.m., and again at noon; at other times during the day slightly positive elec- tricity was shewn.	See General Remarks.	At 9h. a.m. cirrostratus and vapour prevailed principally in the horizon, but before noon the clouds had cleared away, and the sky was cloudless for the remainder of the day.
WED.	No electricity was shewn till near noon, when it attained its max. and was positive; at other examinations no electricity was shewn.	See General Remarks.	The sky was overcast till 2h. p.m., when a few small breaks were shewn in several directions; the clouds, however, soon regained their former density, and covered the sky till 8h. 30m. p.m., when they gradually cleared, and the sky was afterwards cloudless till midnight. The prevailing cloud was cirrostratus.
THURS.	Positive and moderately active as each examination.	See General Remarks.	The sky was generally clear throughout the day. A dense fog arose at about 9h. p.m., and continued during the night.
FRID.	Positive and moderately active through- out the day: at 8h. p.m. strong positive electricity was shewn.	See General Remarks.	The sky was cloudless throughout the day.
SAT.	No electricity was shewn till near noon, when it became slightly positive. Nothing was shewn at any other examination throughout the day.		Overcast till noon, when small breaks were visible in several directions; soon after noon the sky became again covered, and continued so till midnight. The prevailing clouds were cirrostratus, scud, and fleecy.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 29.6; and the mean reading at 7h. 30m. P.M., was 31.6.

† The mean direction of the wind for the week is calm.

During the week the regular observations were discontinued for the purpose of examining the adjustments of the magnetic and meteorological instruments. A few barometrical readings have been taken daily, so as to give an approximation to the mean height: the maximum and minimum temperature of each day has also been taken, by means of self-registering thermometers, and inserted as the highest and lowest readings on each day, and their arithmetical mean is taken and considered to represent the mean daily readings.

	Females .....	526		Females .....	594		Females .....	655
	Total	1068		Total..	1225		Total..	1334

Deaths registered in this the fourth week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—  
 (1840) | (1841) | (1842) | (1843) | (1844) | (1845) | (1846) | (1847) | (average of the series of weeks, exclusive of the last) 993  
 835 | 1107 | 1116 | 974 | 1011 | 1002 | 908 | 1210

Deaths in the districts added in 1847..... 15

1225

NOTE.—The above return contains births and deaths which occurred in the *sub-district* of Hampstead; and in the *sub-districts* of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 16 births and 15 deaths.

# DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shewn at any examination throughout the day.	} See General Remarks.	Overcast throughout the day; a uniform cloud of the cirrostratus kind prevailed.
MON.	Positive with moderately strong tension at 9h. a.m.; at other times during the day slightly positive electricity was shewn.	} See General Remarks.	The sky was covered till noon, after which time the clouds became considerably broken in many directions, exhibiting large portions of blue sky; it continued so till 5h. p.m., when the clouds assumed their former density, and covered the sky till midnight. Shortly before noon a few flakes of snow fell. The prevailing clouds were cirrostratus, scud, and fleecy clouds.
TUES.	Strong positive electricity was shewn at each examination. The max. occurred at noon, when sparks were obtained.	} See General Remarks.	Overcast throughout the day; dense cirrostratus prevailed. At times it was very gloomy.
WED.	No electricity was shewn till noon, at which time it became positive, with moderately strong tension. At 2h. p.m. strong positive electricity was shewn with frequent sparks.	} See General Remarks.	One-half of the sky was covered with cirrostratus and light scud till 2h. p.m. After this time it became completely overcast, and remained so till midnight. At 7h. p.m. snow began to fall, and continued falling till midnight.
THURS.	Positive electricity, with moderately strong tension, was shewn till noon. Soon after noon the instruments became strongly charged with positive electricity, and frequent sparks were obtained. During the evening slightly positive electricity was shewn.	} See General Remarks. } Snow falling fast. } See General Remarks.	Overcast throughout the day, with dense cirrostratus. Snow was falling at frequent intervals during the day.
FRID.	Slightly positive electricity was shewn till 9h. a.m. After this time the tension increased, and was moderately strong at each examination. During the evening slightly positive electricity was shewn.	} See General Remarks.	Overcast throughout the day. Rain mingled with sleet fell at frequent intervals. During the morning a dense fog prevailed.
SAT.	No electricity was shewn till noon, after which time it became positive, with moderately strong tension; at other examinations during the day nothing was shewn, except at 7h. 20m. p.m., when it was slightly positive.	} See General Remarks.	Overcast until 2h. p.m.; after which time the clouds became considerably broken in the W., and remained so till 5h. p.m., when the sky was nearly free from cloud; at 7h. 20m. p.m. the sky was covered with cirrostratus, and continued so till midnight. Rain fell slightly at intervals during the evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The aneroid temperature is read at 10 A.M. (the time at which the aneroid is read is indicated in the previous 24 hours. They are, however, placed preceding. It is placed here opposite to the civil day, which precedes that on which the aneroid is read. The aneroid temperature is read at 10 A.M., and the result given is for the 24 hours

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average. The temperature of the water of the Thames is generally about 50°.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6H. 30M. A.M., was 35.0; and the mean reading at 7H. 30M. P.M., was 34.8.

† The air has been principally calm throughout the week.

During the week the regular observations were discontinued for the purpose of examining the adjustments of the magnetic instruments. A few barometrical readings have been taken daily, so as to give an approximation to the mean height: the maximum and minimum temperature of each day has also been taken, by means of self-registering thermometers, and inserted as the highest and lowest readings on each day, and their arithmetical mean is taken and considered to represent the mean daily readings.

and non-orientated means taken and considered to represent

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population	Males .....		542	Deaths registered in the Week	Males .....		554	Births registered in the Week	Males .....		779
	Females .....		526		Females .....		599		Females .....		746
	Total .....		1068		Total .....		1153		Total .....		1525

Deaths registered in this the fifth week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—  
 (1840) | (1841) | (1842) | (1843) | (1844) | (1845) | (1846) | (1847)  
 818 | 926 | 1025 | 780 | 1086 | 1011 | 901 | 1138  
 Deaths in the districts added in 1847..... 15  
 (average of the series of weeks, exclusive of the last) 935

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 12 births and 15 deaths.

# DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.

	Area in square Miles	Population Enu- merated in 1841	Weekly Average derived from Deaths of 1842-6, and corrected for increase of Population 5 Winters	DEATHS registered in the Week	BIRTHS registered in the Week

\* The DISTRICT of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 4.

(The tabular abstract on the first page is for the week ending Saturday, Jan. 30th. The following selection of cases is made from the returns for the week ending Jan. 23rd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Burns and Scalds (continued):—	duration
Sailor, 24, fractured skull and injuries, by accidentally falling from the mast-head of a French vessel in the River Thames .....	36 hours	Widow, 66, drowned—by what means she came into the water no proof—no marks of violence (an habitual drunkard).		Son of an engineer, 4, burns from the clothes taking fire at a room-grate, without a guard, in absence of a friend .....	11 hours
F. 75, accidental death from a fall, and injury to her head and back .....	5 days	Hanging and Suffocation:—		Daughter of a labourer, 4, { slight burns of the neck and one arm .....	13 days
F. 72, { fracture of the neck of the thigh bone .....	6 months	Barmaid, 23, hanged herself in a temporary state of insanity, to a hedpost.		F. 9 mon., accidental death by scalds from a saucepan of water falling over her.....	*
(no inquest) { paralysis of bladder and rectum. (How was fracture caused?)		Son of a lithographic writer, 9 wks., suffocation when being carried in the arms of his nurse, wrapped in shawls.		M. 4 (no inquest), convulsions, consequent on severe burns of the face, neck, and arm ..	14 days
M. 84, { fracture of cervix femoris .....	4 years	Burns and Scalds:—		Poison:—	
(no inquest) { paralysis (How was fracture caused?)		In King's College Hospital, M. 4, burn.....	15 mins.	Wife of a constable of police, 43, essential oil of bitter almonds, stolen from a shop, taken in porter while drunk, in ignorance of its poisonous effects.....	10 mins.
F. 68, inflammation of the peritoneum and duodenum, from a blow or kick—man-slaughter against Miles Phillips, her husband.....	3 days	(How was it caused?)			

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

F. 67, typhus .. .. .	9 days
F. 69, { febris typhoides .. .. .	25 days
{ erysipelas .. .. .	16 days
F. 2, fever .. .. .	3 weeks
F. 18, { typhus fever .. .. .	3 weeks
{ effusion .. .. .	6 hours
M. 32, fever .. .. .	9 days
F. 1, synochus .. .. .	7 days
F. 13, typhus fever .. .. .	3 weeks
F. 16, typhus fever .. .. .	10 days

Ague:—	
F. 34, { anasarca .. .. .	2 months
{ ague .. .. .	4 months

Remittent Fever:—	
F. 4, remittent fever, accompanied with dis-	
ease of one ear .. .. .	31 days
F. 66, remittent fever .. .. .	*
F. 1, remittent fever .. .. .	14 days

Syphilis:—	duration
M. 3, { secondary syphilis .. .. .	from birth
{ exhaustion .. .. .	*
M. 6 weeks, syphilis .. .. .	3 weeks
F. 1 mon., (inquest), natural death—congenital	
syphilis .. .. .	*

See Returns of Dreadnought Hospital.

Malformation:—	
F. 1, { malformation of the heart .. .. .	from birth
{ convulsions .. .. .	*
M. 10 weeks, morbus cœruleus .. .. .	from birth
M. 2 days (post mort.) obliteration of the	
œsophagus .. .. .	from birth
M. 4 weeks, malformation, general .. .. .	*
M. 12 days (post mort.) imperforate intestine;	
band across rectum, one inch above anus .. .. .	*

Hernia:—	
F. 50, { enteritis .. .. .	*
{ hernia .. .. .	*
{ operation .. .. .	24 hours

See Returns of London and Guy's Hospitals.

Diabetes:—	
No deaths registered from this cause.	
Stone:—	
M. 73, stone in the bladder .. .. .	*

Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.

F. 34, { delivery .. .. .	5 days
{ exhaustion after premature labour in	
the 6th month of pregnancy .. .. .	*
F. 35, { difficult labour .. .. .	3 days
{ peritonitis .. .. .	2 days
{ sloughing of the uterus .. .. .	*
F. 39, { childbirth .. .. .	7 days
{ puerperal fever .. .. .	36 hours
F. 32, metria .. .. .	3 days
F. 21, uterine fever .. .. .	8 days
F. 37, { placenta presentation .. .. .	5 days
{ flooding on the 5th day after delivery .. .. .	*
F. 44, { abortion at the 6th month, .. .. .	17 days
{ irritative fever .. .. .	11 days
F. 39, { childbirth .. .. .	11 days
{ puerperal peritonitis and mania .. .. .	5 days
F. 31, { phlegmasia dolens .. .. .	3 weeks
{ mortification of the foot—exhaustion .. .. .	3 days
F. 22, premature confinement—debility .. .. .	*
F. 24, puerperal fever .. .. .	*
F. 22, { peritonitis .. .. .	3 weeks
{ abortion .. .. .	*

Phthisis and Childbirth:—	duration
F. 34, { phthisis .. .. .	*
{ delivery of a still-born child .. .. .	2 days

Delirium Tremens:—	duration
M. 57, delirium tremens .. .. .	15 days
M. 62, delirium tremens .. .. .	14 days
M. 36, delirium tremens .. .. .	3 days
M. 66, delirium tremens .. .. .	4 days
M. 39, delirium tremens .. .. .	12 days

Bronchitis and Del. Trem.:—	
M. 46, { bronchitis .. .. .	*
{ delirium tremens .. .. .	8 days

Intemperance:—	
F. 34, general debility from habits of intoxication .. .. .	*
F. about 44 (inquest, post mort.) apoplectic effu-	
sion of blood into her brain, after exposure	
to cold during intoxication .. .. .	*
M. supposed about 50, (inquest, post mort.)	
ossification of the valves of the heart, accel-	
erated by intoxication .. .. .	died instantly

Privation:—  
In Westminster, son of a vagrant, formerly a tailor, under 1 (inquest), died in the street in his mother's arms, from exposure to cold and want of sufficient nourishment. He had been carried about the streets by his mother during the intense cold for 7 hours.

Defective Nutrition:—	
M. 3 wks., { defective nutrition .. .. .	14 days
{ apthia .. .. .	*

Miscellaneous Causes:—	
In the House of Correction, prisoner, formerly	
a private in the Guards, 49 (inquest, p.m.)	
rupture of the bladder from chronic disease, 5 hours	
M. 22, { phthisis and fistula .. .. .	89 days
(p.m.) { vomica in both lungs, and adhesions .. .. .	*
M. 2, { abscess .. .. .	4 days
(p.m.) { phlebitis .. .. .	2 days
F. 51, { noli me tangere .. .. .	10 years
{ atrophy .. .. .	*
F. 16 (post mort.), endocarditis .. .. .	14 days
F. 36, endocarditis .. .. .	1 year
M. 65, angina pectoris .. .. .	8 years
M. 36 (post mort.), partial suppuration and	
softening of the middle lobe of the brain on	
the right side .. .. .	*
F. 44 (inquest), natural death, rupture of a	
bloodvessel of the stomach in the act of	
vomiting .. .. .	*

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Deaths from violence, 11; rupture of blood vessel of the head, 1; of the lungs, 1; of the stomach, 1; from ossification of the heart, 2; other diseases of the heart, 3; from other specified causes, 15; "natural," "visitation of God," &c., 9.—TOTAL 43.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 48.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, 30th January, 1847.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shewn at any examination throughout the day.	See General Remarks.	Generally overcast throughout the day. Rain was falling occasionally during the morning, and from noon till 4h. p.m.
MON.	Positive but weak at 2h. a.m. Positive with tension moderate from 9h. a.m. throughout the remainder of the day. Nothing was shewn at any other times.	See General Remarks.	The greater part of the sky was clear during the afternoon. Generally overcast with cirrostratus and scud at other times. Slight rain was falling occasionally during the evening. The wind was blowing in frequent gusts to 4lbs. on the square foot, and at 2h. 50m. a.m. a pressure of 7lbs on the square foot was shewn at the anemometer.
TUES.	Positive and tension moderate from 7h. a.m. till 6h. p.m.	See General Remarks.	The sky was overcast throughout the day, except from 9h. a.m. till noon, when it was about one-third covered with neccy clouds and scud. At about 7h. p.m. a shower of rain fell. There were frequent gusts of wind to 4lbs. on the square foot throughout the day. At 11h. 50m. a pressure of 10lbs. on the square foot was recorded.
WED.	Positive and occasionally active from noon till 10h. p.m.	See General Remarks.	About one-third of the sky was covered till 5h. a.m. Generally overcast during the remainder of the day. Rain was falling between 7h. and 9h. p.m. There were occasional gusts of wind to 5lbs. on the square foot throughout the day, and at 4h. 50m. a.m. a pressure of 12lbs. on the square foot was recorded.
THURS.	At about 3h. 20m. p.m. very active negative electricity was shewn. Positive and tension strong from 9h. p.m. till midnight. Nothing was shewn at any other times.	A dark cloud passing over the zenith See General Remarks.	The greater part of the sky was covered with cloud till 4h. p.m. Generally cloudless during the remainder of the day. Rain was falling occasionally during the morning. At 6h. 30m. a.m., and at 11h. a.m. pressures of 12lbs. and 12½lbs on the square foot occurred respectively.
FRID.	Positive and tension occasionally strong from noon till midnight.	See General Remarks.	Cloudless at 5h. 20m. a.m., and also from 5h. p.m. to midnight. At other times it was generally overcast.
SAT.	Positive and tension strong throughout the greater part of the day.	See General Remarks.	Cloudless till 5h. a.m., from which time till 11h. a.m. it was about one-half covered with cirrostratus and scud. Overcast during the remainder of the day. Slight rain was falling at about 3h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 40.2; and the mean reading at 7h. 30m. P.M., was 41.7; the mean readings at the Royal Observatory for the same times were 39.3 and 40.5 respectively.

† The mean direction of the wind for the week is S.S.W. A gale of considerable violence continued with some intermission from the morning of Sunday, Jan. 24, to the afternoon of Thursday, Jan. 28. The ordinary observations were resumed at the beginning of the week.

## Births and Deaths registered in London,

During the Week ending Saturday, February 6th, 1847.

5 Winters.

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population

Males .....

Deaths registered in the Week

Males .....

Births registered in the Week

Males .....

Deaths registered in this the sixth week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—

(1840) | (1841) | (1842) | (1843) | (1844) | (1845) | (1846) | (1847) | (average of the series of weeks, exclusive of the last): 981

Deaths in the districts added in 1847..... 9

1103

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 27 births and 9 deaths.

\* The age of 1 person, whose death is assigned to apoplexy, is not stated.

NOTE.—Three persons, whose deaths are included in the above return, died at upwards of 100 years; viz., a female, in the sub-district of Mile-end, Old Town (upper part) from "natural decay," at the age of 101 years; a male, in St. John's, St. Marylebone, from "gangræna senilis," aged 102 years; and a male, in the North-east sub-district of the City of London, from "old age," at 104 years.

\* The District of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 5.

(The tabular abstract on the first page is for the week ending Saturday, Feb. 6th. The following selection of cases is made from the returns for the week ending Jan. 30th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds (continued):—	duration
In Charing Cross Hospital, wife of a broker, 35; (post mort.)—compression of the brain, from fracture of the base of the skull—fell down stairs at No. 5, Great Earl Street, Seven Dials	2 days	In King's College Hospital, bricklayer, 46, temporary insanity, from delirium tremens—cut his throat with a table knife, at No. 60, New Compton Street, on 31st December, 1846; and again with his penknife in King's College Hospital, on the following day.	46 hours	In St. Thomas' Hospital, son of a labourer, 4, burnt by his pinafore taking fire from a candle falling on it (at Redcross Square, Tower Street)	19 hours
In King's College Hospital, daughter of a widow 14 (post mort.),		After first wound.	25 hours	In St. Thomas' Hospital, son of an eating house keeper, 5, burnt by his pinafore taking fire, whilst at play (at Great Guildford Street, Southwark)	21 hours
natural—from inflammation of the lungs and disease of the heart	15 days	In Guy's Hospital, engineer, 50, wound on his throat, inflicted at Woolwich, but no evidence how	10 weeks	In St. Thomas' Hospital, son of a labourer, 6, burnt by his clothes taking fire, whilst playing with fire (at New Cross)	7 hours
curvature of the spine, and malformation of the chest, caused by a fall from the nurse's arms	10 years	Wife of a labourer, 29, vomiting of blood, from laceration of the gullet, by swallowing a fish bone accidentally	7 days	In St. Thomas' Hospital, daughter of a leather cutter, 12, burnt by her pinafore taking fire, by a spark which came from the fire (at Old Kent Road)	1 week
Single woman, housekeeper, about 33 (post mort.), concussion and compression of the brain—fell down stairs when intoxicated about 45 mins.		Hanging and Suffocation:—		In St. Thomas' Hospital, son of a labourer, 2, burnt by his clothes taking fire, whilst alone (at Walworth)	9 days
In Guy's Hospital, cowkeeper, 49, delirium tremens, brought on by a fracture of the patella, from slipping down in the frost (at Camberwell)	3 days	M. 47, suicide by hanging, in temporary derangement	*	In Guy's Hospital, daughter of a labourer, 2, burnt by her clothes taking fire, whilst alone in a room (in Winchester Street, Southwark)	7 hours
M. 51, fracture of the base of the skull, from an accidental fall down a flight of stairs	12 days	M. 69, choked with a piece of bread	*	In Guy's Hospital, daughter of a labourer, 5, burnt by her clothes taking fire in her father's room (at Burdett Street, Lambeth)	30 hours
In Guy's Hospital, spinster, 72, effects of a fractured thigh, from being run over by a cabriolet, whilst crossing Blackfriars' Road	3 weeks	Burns and Scalds:—		In Guy's Hospital, stoker at a brewery, 25, scalded by falling into a copper of hot water (at Lambeth)	12 hours
Son of a labourer, 11, accidentally run over by a waggon, and	killed on the spot	In Westminster Hospital, son of a boiler-maker, 5, burns of the face, chest, and arms—clothes took fire from a fire in the grate in his parents' room (in Westminster Road)	21 days	F. 6, scald on the chest	6 weeks
F. 20, found dead in the River Thames, with a fracture of her skull—but no evidence how caused—had been in the water probably	2 months	In Guy's Hospital, son of a tanner, 5, burnt by his bedgown taking fire, from a lucifer match (at Bermondsey)	36 hours	(no inquest) inflammatory fever	10 days

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	Charing Cross H.:—	duration	St. Bartholomew's H.:—	duration
M. 60, extensive disease of the heart	about 9 months	M. 54 (post mort.), bronchitis	many years	M. 40, phthisis	*
F. 56, anasarca	*	F. 56, strangulated femoral hernia	*	M. 45, dropsy	*
M. 50, bronchitis	*	(post mort.) operation	31 hours	M. 30, emphysema of the lungs	*
F. 48, diseased heart and kidneys—anasarca—bronchitis	*	See Violent Deaths.		M. 30, chronic disease of the heart	*
F. 37, diseased heart and kidneys—fatty liver	*	Middlesex H.:—No Deaths registered.		M. 24, strangulated hernia	*
Westminster H.:—		University College H.:—No Deaths registered.		M. 24, operation	*
M. 48, morbus cordis—nephria	*	Fever H.:—No Deaths registered.		M. 15, inflammation of the brain	*
M. 57, cancerous ulceration of the œsophagus—cancer of the liver, kidneys, and heart	6 months	Small Pox H.:—No Deaths registered.		F. 47, chronic bronchitis and emphysema	*
See Violent Deaths.		King's College H.:—		F. 36, inflammation after the cesarian operation	36 hours
		M. 43, aneurism	*	F. 52, paralysis of lower extremities	5 months
		F. 46, ovarian dropsy	several months	F. 52, pneumonia	4 weeks
		See Violent Deaths.			

THIRTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued).—

London H.:-		St. Thomas' H.:-		Dreadnought H.:-	
	duration		duration		duration
M. 6, lithotomy	11 months	M. 36, abdominal tumor (the nature not ascertained by <i>post mortem</i> examination)	*	M. 17 ( <i>post mort.</i> ), erysipelous inflammation of the peritoneum	38 hours
M. 59, chronic abscess	8 months	F. 50, cancer of the breast	long duration	M. 23, ( <i>post mort.</i> ) ascites	3 months
M. 41, pneumonia (left lung)	9 months	M. 48, pleuro-pneumonia	*	( <i>post mort.</i> ) paracentesis	6 weeks
( <i>post mort.</i> ) phthisis	6 months	Guy's H.:-		M. 35, phthisis	4 months
pleuritic effusion of right side	48 hours	M. 16, stone in the bladder	*	( <i>post mort.</i> ) tubercular deposit in both lungs	*
complete obstruction of intestines	9 days	M. 25, phthisis	*	( <i>post mort.</i> ) large cavity in the left lung	*
enteritis	6 days	M. 58, stricture of the urethra; the bulb suddenly locked up by a small calculus (uric acid)	*	M. 28, strumous cervical glands	*
M. 17, stricture and strangulation of two convolutions of ilium, by an appendix vermiformis of large intestine, which had become adherent to ilium at a former period from inflammation	8 months	M. 59, stricture of urethra	2 years	( <i>post mort.</i> ) erysipelas	7 days
F. 40, consumption	8 months	F. 24, phthisis	*	( <i>post mort.</i> ) suppuration beneath the jaw, and oedema of the glottis	*
DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination during the day.	} See General Remarks.	With the exception of a few breaks in the clouds in the morning and afternoon, the sky was covered with cirrostratus and scud throughout the day.
MON.	Positive and tension moderately strong throughout the day. The max. at 5h. am.	} See General Remarks.	Cloudless till 3h. a.m.; shortly after this time cirrostratus and fleecy clouds suddenly came up from the W., and generally covered the sky for the remainder of the day. Light snow was falling from 6h. a.m. to 9h. 30m. a.m.
TUES.	Positive and tension moderate till 5h. a.m. During the remainder of the day positive and tension exceedingly weak.	} Snow was falling slightly at 6h. a.m. } See General Remarks.	With the exception of a short interval of time about 3h. a.m., the sky was generally covered with cirrostratus and scud throughout the day. A small quantity of snow fell about 6h. a.m., and also from 3h. p.m. to 9h. p.m.
WED.	Positive and tension strong at 9h. 20m. p.m. At other times during the day no electricity was shown.	} See General Remarks.	Overcast with cirrostratus and scud throughout the day. Snow was falling frequently during the day.
THURS.	No electricity was shown till 5h. a.m. From 9h. a.m. till 2h. p.m. positive and tension exceedingly strong. During the remainder of the day positive and tension moderate.	} See General Remarks.	Generally overcast with cirrostratus and scud till 7h. p.m. A considerable portion of the sky was free from cloud from 6h. p.m. till midnight.
FRID.	Positive and tension strong throughout the day. The max. at 11h. a.m.	} See General Remarks.	From 6h. a.m. till 3h. 40m. a.m. an extensive portion of the sky was free from cloud, but shortly after this time a large bank of cirrostratus suddenly came up from the N., and obscured the sky. It remained overcast with these clouds during the remainder of the day. Showers of rain fell at 3h. p.m. and 6h. 50m. p.m.
SAT.	No electricity was shown till 5h. a.m. From 5h. a.m. till 5h. a.m. positive and tension very weak. Negative and tension strong at 9h. a.m. Positive and tension very weak during the remainder of the day.	} See General Remarks. A shower of rain. } See General Remarks.	Overcast with cirrostratus and scud till 10h. a.m. The clouds were considerably broken from this time till 1h. p.m., when the sky again became overcast, and remained so generally till 6h. p.m. It became cloudless at 6h. 30m. p.m., and remained so till midnight. Frequent showers of rain fell in the early part of the morning. The wind was blowing in gusts from S.W. to S.E. pressure on the square foot from 6h. p.m. till 10h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 31.4; and the mean reading at 7h. 30m. P.M., was 36.3; the mean readings at the Royal Observatory for the same times were 33.1 and 35.5 respectively.

† The direction of the wind for the week has been variable, but during a great portion of it the air has been calm.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, February 13th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

Deaths in the districts added in 1847.....													
17													

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 28 births and 17 deaths.

\* The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

\* The DISTRICT of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 6.

(The tabular abstract on the first page is for the week ending Saturday, Feb. 13th. The following selection of cases is made from the returns for the week ending Feb. 6th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Burns and Scalds (continued):—	duration
M. 41, { a fall from hunting ..... years ago (no inquest) { producing chronic disease of brain 9 years last illness ..... 7 days		M. 72, { fracture of the neck of the thigh (no inquest) { bone ..... 8 months chronic bronchitis ..... 1 month (Query—How was the fracture caused)		In London Hospital, spinster, without occupation, 24, accidentally burnt by her clothes catching fire ..... on the same day	
In London Hospital, schoolmaster, 86, accidental from a fall on the road, and fractured thigh.....	6 days	Wounds:—		F. 65, accidental death from burns, by her clothes taking fire from a candle ..... 3 days	
In London Hospital, slater, 60, accidental by a fall from the roof of a house at Shelford, Essex.....	*	In London Hospital, labourer, 42, natural from vomiting and diarrhoea, which may have been accelerated by a lacerated foot (no evidence how caused).....	*	Wife of a rigger, 68, accidentally burnt to death from her clothes catching fire.....	*
In London Hospital, rigger, 50, accidental by a fall down a ship's hold—fractured skull.....	*	Drowning:—		M. 2 (no inquest), scald.....	8 days
M. 54, { concussion of the brain from a fall 7 years (no inquest) { chronic affection of the brain.....	5 or 6 years	M. cook on board the Acadia, 58, accidental death from drowning.		(an imperfect return)	
Carpenter, 30, accidental death by a fall from a yard arm into the Hermitage basin.....	*	Mate of a ship, 54, accidental death from drowning, by falling from a buoy.		NOTE.—The following case was reported in the returns for the week ending January 23rd, but in an imperfect manner:—	
In London Hospital, labourer, 27, accidental by the falling of a piece of lead, from the breaking of a rope.....	*	F. domestic servant, 18, suicide by drowning herself, being in a state of mental derangement (under water 3 hours).		In King's College Hospital, son of a smith, 4 (post mort.), burns of the body and limbs—found with his clothes in flames, having been left in his mother's room with a fire, and candle burning.....	about 30 mins.
In London Hospital, waggoner, 18, accidentally run over by a waggon, and killed.....	*	Burns and Scalds:—		Poison:—	
F. (innate of workhouse), 89, fractured thigh, received accidentally.....	*	In London Hospital, son of a single woman, 2, accidental, by burns from his clothes catching fire.....	died on the same day	In London Hospital, shoemaker, 17, poisoned himself by taking turpeth mineral (in a state of temporary insanity).....	6 days
(Query—How caused?)					

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's II.:—	duration	Charing Cross II.:—	duration	University College II. (continued):—	duration
M. 32 (post mort.), scirrhus tubercle of the brain, with softening of surrounding structure.....	*	M. 45 (post mort.), softening of brain.....	*	M. 72 (post mort.), erysipelas of head—abscess between calvaria and dura mater.....	*
M. 1 (post mort.), inflammation of the serotum and thighs—and congestion of the brain..	*	F. 50, { Bright's disease of the kidneys.....	*	M. 36, extensive suppuration among the muscles of the back.....	*
M. 60 (post mort.), enlarged heart and dropsy—old and recent pericarditis—granular kidneys.....	*	Middlesex II.:—		M. 17, double pleuro-pneumonia—pericarditis	*
F. 45 (post mort.), diseased heart, and granular degeneration of the kidneys.....	*	F. 42, { femoral hernia.....	*	M. 23, empyema.....	*
dropsy—effusion into the pericardium and pleure—congestion of lungs.....	*	F. 42, operation.....	1 month	Fever II.:—No Deaths registered.	
Westminster II.:—		F. 42, emphysema pulmonum.....	*	Small Pox II.:—No Deaths registered.	
M. 52, phthisis pulmonalis.....	1 year	F. 37, emphysema—bronchitis.....	*	King's College II.:—No Deaths registered.	
F. 55, acute bronchitis.....	17 days	University College II.:—		St. Bartholomew's II.:—	duration
		F. 17, hypertrophy and dilatation of heart—pericarditis—tubercles of lungs—double bronchitis.....	*	M. 76, old age.....	*

		(post mort.) { of stomach .....	*		
		{ acute peritonitis .....	about 65 hours		

See Deaths by Violence.

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox:-	duration	Gonorrhœa:-	duration	Disease with Childbearing:-	duration
M. 4 mon., small pox (without vaccination) ..	*	{ gonorrhœa and orchitis .....	43 days	F. 27, { gastritis .....	3 weeks
M. 7, { small pox (natural) .....	*	{ tonsillitis .....	3 days	{ miscarriage .....	*
F. 1, { ascites, with enlarged liver .....	10 days	{ dropsy of the pericardium .....	*	F. 37, { epilepsy .....	many years
F. 4, { small pox—(natural—after vaccination) 12 days				{ effusion on the brain .....	1 week
F. 4, { convulsions .....	20 min.			{ delivery .....	4 days
F. 1, small pox (without previous vaccination) ..	*	Hæmorrhage:-		Delirium Tremens:-	
M. 8 mon., small pox (not vaccinated) .....	*	M. 1, hæmorrhage and convulsions from teething ..	*	M. 65, delirium tremens .....	1 week
M. 3, natural small pox .....	4 weeks	F. 58, rupture of a blood vessel .....	*	M. 33, { delirium tremens .....	14 days
		M. 38 (inquest), natural death—sudden, from	*	{ typhus .....	3 days
		internal rupture of a blood vessel .....	*	M. 54, delirium tremens .....	3 days
				Other causes with Del. Trem:-	
				M. 35, influenza—delirium tremens .....	*
				F. 55, { dyspepsia .....	6 months
				{ delirium tremens .....	2 weeks
				Intemperance:-	
				Wife of a painter, 51 (inquest), found dead—	
				apparently from suffocation from excessive	
				drunk.	
				Privation:-	
				F. 3 mon., atrophy from innutritious diet ....	*
				Atrophy, &c.:-	
				F. 44, { peritonitis chronic .....	18 days
				{ emaciation from poor living, &c. ....	3 or 4 yrs.
				F. 14 days, general debility from want of the	
				breast.	
				F. 5 weeks, atrophy—the mother being dan-	
				gerously ill, and unable to nurse it.	
				Miscellaneous Causes:-	
				{ cirrhosis .....	3 years
				{ jaundice .....	10 weeks
				M. 47, { ascites .....	8 weeks
				{ dropsy of lower extremities .....	6 weeks
				{ hæmatemesis .....	5 days
				{ phthisis .....	3 months
				F. 14, { peritonitis chronic .....	6 weeks
				{ diarrhoea .....	1 week
				{ refused to submit to any treatment.	
				F. 31 (post mort.), a gallstone impacted in the	
				common duct—gastritis .....	14 days
				F. 24, { ovarian dropsy .....	3 months
				{ after paracentesis .....	3 days
				M. 45 (post mort.), exhaustion consequent on	
				scrofulous inflammation of the internal ear,	
				involving the membranes of the brain, nose,	
				and throat .....	*
				F. 13 (p.m.), diseased temporal bone—abscess	
				in cerebellum .....	6 months
				F. 1 (inquest—post mort.), bronchitis .....	*
				natural death; but the jurors were of	
				opinion that the deceased was not in a pro-	
				per state of health to be removed.	
				M. 64, { rupture of urethra from stricture ..	3 days
				{ infiltration of urine.	

See Return of Middlesex Hospital.

Diabetes; Stone:-

No deaths registered from either of these causes.

Childbirth:-The time elapsing from commencement of labour to death should invariably be returned.

F. 30, { bronchitis .....	3 months
{ childbirth .....	9 days
{ puerperal fever .....	8 days
F. 27, { pleuritis .....	*
{ abortion .....	8 days
F. 37 (p.m.), flooding in labour .....	12 hours
F. 23, metro-peritonitis .....	15 days
F. 28, { parturition .....	3 weeks
{ enteritis .....	*
F. 43, { parturition .....	3 weeks
{ fever .....	*
F. 41, exhaustion from hæmorrhage after de-	
livery of a still-born female child .....	*
F. 37, exhaustion from premature delivery ..	7 days

In the Return for the Week ending February 6th, Deaths were:-

(1) Certified by Medical Attendant in .....	1015 cases
(2) Attested by Coroner .....	29
(3) Attended by a Midwife .....	1
(4) Stated to have had no Medical Attendant .....	16
(5) Not certified .....	42

Total. 1103

Deaths under 1st and 2nd heads show a proportion to the total number of 94 per cent. It must be observed, that the term "certified" signifies, that in all cases to which it is applied, a written statement of the cause of death was made by a qualified practitioner. Besides the 16 deaths enumerated above, others which had no medical attendance are probably included under the 2nd and 5th heads.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Deaths from violence, 16; cerebral apoplexy, 2; pulmonary apoplexy, 1; disease of the heart, 2; intemperance 1; other specified causes, 6; "natural death;" "visitation of God," &c., 1.—TOTAL, 29 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 41.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 13th February, 1847.

Day.	Phases of the Moon	Mean height of the Barometer, from 29.0 to 30.0 inches (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			WIND							Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning
			Dry			Dew Point Mean from 12 Obs. DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension occasionally strong at each examination.	} See General Remarks.	Overcast with snow and sleet falling almost incessantly till 7h. p.m., when it became clear, and continued so throughout the remainder of the day.
MON.	Positive but tension variable throughout the day.	} Snow generally falling from noon till midnight.	The sky was cloudless till 8h. a.m., when it became overcast, and continued mostly so throughout the remainder of the day. Snow was falling heavily from noon till about 11h. p.m.
TUES.	Nothing was shewn except at 5h. 20m. a.m., and from 5h. p.m. till midnight, when it was positive and moderately active.	} See General Remarks.	It was generally overcast till 6h. a.m.; about one-half covered from that time till 2h. p.m., and variable in amount during the remainder of the day. It was, however, occasionally cloudless. The depth of snow on level ground is from 5 to 8 inches.
WED.	Positive and tension generally active till 2h. p.m. Nothing was shewn after that time.	} See General Remarks.	The sky was about two-thirds covered with cirrostratus, fleecy clouds, and scud from 1h. a.m. till 6h. p.m.; at other times it was cloudless. At about 6h. a.m. snow was falling. Haze and vapour were prevalent throughout the day.
THURS.	Positive and tension strong from 2h. p.m. till midnight. Slightly positive and occasionally nothing shewn before that time.	} See General Remarks.	The greater part of the sky was covered with cirrostratus and scud throughout the day, except from 7h. p.m. till midnight, when it was mostly cloudless. Snow was falling at about noon.
FRI.	Positive and tension strong from 7h. a.m. till 6h. p.m. Nothing shewn at any other time.	} See General Remarks.	The sky was cloudless till 4h. a.m.; mostly overcast from that time till 5h. a.m.; then clear till about 2h. p.m., and overcast with cirrostratus and scud throughout the remainder of the day.
SAT.	Positive and generally active from 7h. a.m. till midnight.	} See General Remarks.	It was generally overcast till noon; about one-third covered with cirrostratus from that time till 8h. p.m., and overcast during the remainder of the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 22.9; and the mean reading at 7h. 30m. P.M., was 29.1; the mean readings at the Royal Observatory for the same times were 20.4 and 27.4 respectively.

† The direction of the wind for the week is S.W.

The temperature of the air during this week has been very remarkable on account of its great departure from the average; on the 12th day at about 6h. a.m. the lowest reading this winter took place, being 10.5 at the Observatory, and at the same time it was 6.0 at Dartmouth Terrace, Lewisham, the residence of Mr. Glaisher. At 6h. 30m. a.m., on board the Dreadnought Hospital Ship, the thermometer read 16.0, at the Observatory at the same time it was 13.0; at 7h. 20m. a.m. it was 14.0; at 9h. 20m. a.m. it was 18.8; at 11h. 20m. a.m. it was 29.9; at 1h. 20m. p.m. it was 33.0; and it sank to 27.5 by 11h. p.m. At Dartmouth Terrace at 7h. a.m. it was 10.0; at 7h. 30m. a.m. it was 10.5; at 8h. a.m. it was 11.0; at 9h. a.m. it was 11.8; at 9h. 45m. a.m. it was 14.0; at 10h. a.m. it was 16.0; and at 10h. 45m. a.m. it was 24.5; it afterwards rose to 33.5, and sank to 24.0 before midnight. These numbers exhibit a great difference of local temperature. On the 13th day the reading of the thermometer was 20.0, without any variation from 6h. a.m. to 11h. a.m., both at the Observatory and at Dartmouth Terrace; after this time it rose at the Observatory to 32.0 by 3h. p.m.; it then fell to 25.0 by 7h. p.m., and rose to 30.5 by 11h. 20m. p.m.; at Dartmouth Terrace it rose to 33.5 by 2h. p.m.; it fell to 21.0 by 7h. p.m.; it had risen to 29.0 by 11h. p.m., and to 32.0 by midnight; after this time it still rose rapidly.

The lowest temperature of the Thames Water during the week has been 32.5, the effect of which on the temperature of the air will be seen by the following simultaneous observations taken at 7h. 20m. every evening.—

On February 7th, at the Dreadnought, the thermometer read 28.0; at the Royal Observatory, it read —; at Dartmouth Terrace, 24.0.			
" 8th	"	29.5	27.5
" 9th	"	28.0	25.4
" 10th	"	30.0	29.8

Deaths registered in this the eighth week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—  
 (1840) | (1841) | (1842) | (1843) | (1844) | (1845) | (1846) | (1847) | (average of the series of weeks, exclusive of the last) 1022  
 931 | 1057 | 960 | 1018 | 1115\* | 1121 | 951 | 1233

Deaths in the districts added in 1847..... 20

1253

NOTE.—The above return contains births and deaths which occurred in the *sub-district* of Hampstead; and in the *sub-districts* of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 15 births and 20 deaths.  
 \* The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.  
 NOTE.—A man is stated to have died in the Church district of Bethnal Green, at the advanced age of 103 years.

DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.		Area in square Miles	Population Enu- merated in 1841	Weekly Average derived from Deaths of 1842-6, and corrected for increase of Population 5 Winters	DEATHS registered in the Week	BIRTHS registered in the Week

\* The DISTRICT of Lewisham and *Sub-district* of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 7.

(The tabular abstract on the first page is for the week ending Saturday, Feb. 20th. The following selection of cases is made from the returns for the week ending Feb. 13th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, *in years, except when otherwise stated*. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Suffocation (continued):—	duration
In Westminster Hospital, widow, about 74 (post mort.), wound of the scalp and shock of the system—knocked down by a chariot drawn by two horses, when crossing the road at Whitehall, and trodden on by one of the horses.....	4 days	Eating-house keeper, 38, suicide with a pistol ball, fired into his head—insane after excessive and habitual drinking of spirits.....	*	Wife of a cat's meat seller, 50, accidental strangulation and apoplexy, caused by a flannel tied tight about her head and chin—she falling with her face downwards died in a few mins.	
F. 81, (no inquest) { debility from age—chronic bronchitis..... fracture of neck of femur within the capsule, from a fall on 5th September, 1845—bedridden ever since,	*	Labourer, 49, natural peritonitis, accelerated by injuries received from a boar-pig on the right thigh, causing great exhaustion by loss of blood.....	8 weeks	Burns and Scalds:— Daughter of a sawyer, 9 mon., burns received by her clothes taking fire, being laid upon the hearth rug.....	20 hours
The period which elapsed between injury and death should have been stated, instead of the date at which the former occurred.		Drowning:— Coal porter, 35, drowned in the River Thames, by accidentally falling overboard from a steamer—under water 5 weeks.		Licensed victualler (widow), 32, injuries received from being accidentally burnt.....	31 days
M. 84, (no inquest) { fracture of the neck of the thigh bone..... sloughing of the nates. Query—How caused?	about 4 years	M. 22, accidentally drowned by a fall from a fly boat.		Poison:— Widow of an estate agent, 28, suicide with oxalic acid—four-fifths of an ounce swallowed—taken during intoxication.....	died in 15 min.
Wife of a sailor, 44, concussion of the brain, but how caused no evidence to prove.....	7 days	Assistant to a licensed victualler, 21, drowned—a scalp wound—body greatly decomposed—no proof by what means he was drowned, or received the injury—missing 7 weeks.		F. 34, poisoned herself in a temporary state of insanity, with arsenic.....	*
		Suffocation:— M. newly born, strangulation with a piece of frock tied round the neck, and so wilfully murdered by persons unknown.		F. 10 wks, died from effects of mercury, imbibed through the mother's milk, she having become salivated by taking two antilithic pills, containing not more than two grains of mercury (no blame exists against any person).....	*

### FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	St. George's H. (continued):—	duration	Middlesex H.:—No Deaths registered.	duration
M. 20, (post mort.) { hronchocele—excision..... cellular inflammation..... secondary abscesses in lungs.	*	F. 35, anasarca—ascites—effusion into left pleura.....	*	University College H.:— M. 73 (inquest), natural—had twice become insensible suddenly (not ill previously) died in 5 min.	
M. 2, (post mort.) { tubercular deposit in the lungs, liver, spleen, kidneys, and bowels. ulceration of bowels.		(post mort.) { phthisis pulmonalis..... ulceration of the bowels.....	*	Fever H.:— F. 18, { fever..... in hospital 10 hours.	*
M. 53, (post mort.) { acute pleurisy..... slight peritonitis..... diseased heart—granular degeneration of the kidneys.....	11 days	Westminster H.:— M. 53, { phthisis pulmonalis..... hemiplegia.....	2 years 5 years	Small Pox H.:—No Deaths registered.	
F. 40, (post mort.) { dilated heart. effusion into pleura. ascites. cancerous disease of left lung—illness reported to be of 1 year's duration		M. 14, lumbar abscess.....	6 months	King's College H.:— M. 19, heart disease..... M. 32, heart disease..... M. 28, phthisis..... M. 42, bronchitis..... F. 22, pneumonia.....	4 months several years 10 months 4 months 12 days
		See Violent Deaths.			
		Charing Cross H.:— M. 31 (post mort.), bronchitis—necrosis of the femur..... M. 38 (post mort.), bronchitis—cirrhosis of the liver—disease of the mitral valve.....	*		

THIRTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued):—

		F. 31, exhaustion from premature delivery in		brain.....	*
		connexion with deformity of pelvis, and			
		pretermatural presentation of the fetus.....	3 days		

In the return for week ending February 13th, deaths were—

(1) Certified by Medical Attendant in.....	994 cases.
(2) Attested by Coroner.....	80 "
(3) Stated to have had no Medical Attendant.....	23 "
(4) Not certified.....	50 "

TOTAL.....1147

Deaths under 1st and 2nd heads show a proportion to the total number of upwards of 93 per cent. It must be observed, that the term "certified" signifies, that in all cases to which it is applied, a written statement of the cause of death was made by a qualified practitioner. Besides the 23 deaths enumerated above, one which had no medical attendance is included under the 2nd head; and there are probably more under that and the 4th heads.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Deaths from violence, 14; cerebral apoplexy, 10; apoplexy with intemperance, 2; congestion of the lungs, 1; angina pectoris, 1; other disease of the heart, 6; want, 1; childbirth, 1; other specified causes, 27; "natural," "visitation of God," &c., 17.—TOTAL, 80 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 31.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shewn at any examination during the day.		Generally overcast with cirrostratus and scud throughout the day. Rain was falling heavily at 3h. a.m. The wind blew at nearly a constant pressure of 4lbs. on the square foot, from 6h. a.m. till 9h. a.m. A rapid thaw.
MON.	No electricity was shewn till 3h. a.m. From this time till 5h. a.m. it was positive with weak tension. From 9h. p.m. till midnight positive and tension moderate.	See General Remarks.	Overcast with cirrostratus and scud till 4h. p.m. Rain was falling frequently from 9h. a.m. till 2h. p.m. In the afternoon and evening the amount of cloud was variable, cirrostratus, scud, and vapour being generally prevalent. The wind was blowing in gusts varying from 5lbs. to 8lbs. pressure on the square foot, from 3h. p.m. till midnight.
TUES.	No electricity was shewn till 5h. a.m. From this time till 2h. p.m. it was positive with weak tension. Positive and tension moderate from 7h. p.m. till midnight.	Rain was falling at 1h. p.m. See General Remarks.	Cloudless till 6h. a.m.: soon after this time a thin cirrostratus suddenly obscured the sky, and during the remainder of the day it continued overcast with these clouds. Rain was falling heavily from 1h. p.m. till 3h. p.m.
WED.	Positive and tension very weak till 5h. a.m. During the remainder of the day no electricity was shewn.	See General Remarks.	Cloudless till 5h. a.m.: from 9h. a.m. till 2h. p.m. one-half of the sky was generally covered with cirrostratus and scud. At 4h. p.m. it became overcast, and remained so till midnight. The wind was blowing in gusts from 3lbs. to 5lbs. pressure on the square foot throughout the day.
THURS.	With the exception of a short time about noon, when the electricity was positive and very weak, nothing was shewn throughout the day.	See General Remarks.	Overcast with cirrostratus and scud throughout the day. From 11h. a.m. till 1h. p.m. the wind blew with a pressure varying from 6lbs. to 8lbs. pressure on the square foot. At other times during the day the pressure was generally from 3lbs. to 5lbs. on the square foot. Rain fell slightly in the evening.
FRI.	No electricity was shewn till 7h. p.m. From this time till 9h. p.m. it was positive, with tension exceedingly weak.	See General Remarks.	Generally overcast with cirrostratus and scud till 6h. a.m.: from this time till 6h. p.m. the sky was one-half covered with cumuli, cirrostrati, and scud. It became cloudless soon after 6h. p.m., and remained so till midnight. The wind was blowing violently throughout the day; the maximum pressure occurred at 3h. a.m. Several gusts of wind took place from 5h. 40m. a.m. to 6h. 40m. a.m., with pressures varying from 12lbs. to 14lbs. on the square foot.
SAT.	No electricity was shewn till 9h. a.m. From this time till midnight it was positive with moderate tension.	See General Remarks.	Cloudless till 2h. a.m.: during the remainder of the day, with the exception of a short time about noon, the sky was covered with cirrostratus and scud. A halo was visible around the moon at 7h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 43.7; and the mean reading at 7h. 30m. P.M., was 46.9; the mean readings at the Royal Observatory for the same times were 42.8 and 45.9 respectively.

† The direction of the wind for the week is S.W. by W.

The temperature during this week has been remarkable, on account of its excess above the average, exhibiting, in this respect, a marked contrast to the extreme severity of the preceding week. This great change was indicated as about to take place, in the foot note to the report of last week. The temperature after midnight on Saturday, Feb. 13, increased from 32° to 45°; the average temperature for Sunday was 43°, and during the whole of Sunday night the temperature was 41°. The thaw was so rapid, that on Monday morning nearly every trace of the preceding week's hard frost was obliterated, and since that time, the average temperature of each day has been in excess, and to a large amount, as shewn above.

# A TABLE OF

## Births and Deaths registered in London,

During the Week ending Saturday, February 27th, 1847.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL

Females .....	526	Females .....	524	Females .....	719
Total .....	1068	Total .....	1044	Total .....	1478

Deaths registered in this the ninth week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—  
 (1840) | (1841) | (1842) | (1843) | (1844) | (1845) | (1846) | (1847)  
 984 | 1096 | 975 | 1036 | 1055\* | 1133 | 916 | 1035  
 Deaths in the districts added in 1847..... 9  
 (average of the series of weeks, exclusive of the last) 1028

1044

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 17 births and 9 deaths.

\* The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.		Area in square Miles	Population Enu- merated in 1841	Weekly Average derived from Deaths of 1842-6, and corrected for increase of Population 5 Winters	DEATHS registered in the Week	BIRTHS registered in the Week

\* The District of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 8.

(The tabular abstract on the first page is for the week ending Saturday, Feb. 27th. The following selection of cases is made from the returns for the week ending Feb. 20th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Burns and Scalds:—	duration
In St. Bartholomew's Hospital, coach painter, about 44 (post mort.), fracture of his skull, caused by a fall as he was getting in at a window (at Whitecross Street) .....	6 days	F. 87 (no inquest), fracture of the femur, with consequences .....	3 months	In St. Bartholomew's Hospital, son of a labourer, 5, burnt by his pinafore taking fire, whilst alone (at Islington) .....	7 hours
M. 9 mon. (no inquest), accidental concussion of the brain from a fall .....	26 hours	In Westminster Hospital, M. 48 (no inquest), supposed secondary deposition of pus—injury to elbow .....	8 days	In St. Bartholomew's Hospital, son of a copper-plate printer, 3, burnt by his clothes taking fire, whilst alone (at Shacklewell) .....	20 hours
F. 13, (no inquest) followed by abscess, with extensive disease in the same region.	4 years	(The cause of injury should have been stated.)		In St. Bartholomew's Hospital, daughter of a carman, 7, burnt by her frock and pinafore taking fire, from a cinder falling out of the fire (at Clerkenwell) .....	20 hours
M. 19, accidentally killed by falling down a ship's hold on his head.		Wounds:—		In St. Bartholomew's Hospital, daughter of a clerk in a brewery, 1, burnt by her clothes taking fire, by another child putting a piece of lighted paper to her pinafore. ....	1 week
Carpenter, 44 (post mort.), accidental death from fracture and dislocation of the ankle, by a fall from a plank (at Ferry Road, Poplar) .....	3 months	In King's College Hospital, shoemaker, 49, erysipelas following wound in the throat—cut his throat with a shoemaker's knife (in temporary insanity) .....	17 days	In St. Bartholomew's Hospital, daughter of a labourer, 4, scalded by the upsetting of a saucepan from the fire, containing hot water (at Francis Street, City Road) .....	17 hours
M. 58, inflammation of the spinal cord, and effusion of serum thereon, from an accidental fall .....	13 days	In St. Bartholomew's Hospital, under-cutter at a paper mill, about 18 (post mort.), disease of the brain, most probably accelerated by lacerating his left arm by the machinery of a paper mill, at Woburn, Bucks .....	17 days	In St. Bartholomew's Hospital, son of a fishmonger, 1, scalded on the buttocks by being held over hot water, to induce a motion of the bowels (at Cole's Buildings, Long Lane, Smithfield) .....	54 hours
F. 56, effects of an accidental fall in the street .....	55 days	M. 18, suicide by cutting his throat in temporary insanity .....	instant	Poison:—	
In St. Bartholomew's Hospital, widow, 82, fracture of her skull by falling from a cart (the horse having slipped down from the frost in Old Street Road) .....	a few minutes	F. 42, suicide by cutting her throat with a razor, in temporary derangement .....	*	In St. Bartholomew's Hospital, coachmaker, 34 (post mort.), congested state of the vessels of the brain, arising from a dose of laudanum, an overloaded stomach, exposure to cold, and the application of the stomach pump .....	5 hours
Omnibus driver, 37, lacerated wound of the scalp, by being thrown off an omnibus (manslaughter against Matthew Ford) .....	9 days	Drowning:—		M. 30, taking oxalic acid in temporary insanity found dead.	
F. 81 (no inquest—post mort.), fracture of the neck of the femur—in mortification of the back .....	*	Daughter of a labourer, 11, accidentally drowned, venturing on the Lea at Bunker's pond.			
In St. Thomas' Hospital, M. 91 (no inquest), fracture of the neck of the thigh bone, from which the patient had recovered; but he became afterwards ill, and was at times delirious, and gradually sank .....	*	Labourer, 45, accidentally drowned in the London Docks, by falling with a truck from the quay.			
		Suffocation:—			
		F. 3 wks., accidental asphyxia in bedclothes, caused by pressure against her mother's person, whilst asleep.			

### FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

{ hæmorrhage from the bowels .....	10 days				
M. 59, { fever .....	10 days				
{ bronchitis .....	*				
See Hospital Returns.					
Remittent Fever:—					
F. 3, { remittent fever .....	8 days				
{ hydrocephalus .....	4 days				
M. 1, { remittent fever with bronchitis .....	3 months				
{ rupture of a blood vessel of the stomach .....	24 hours				
F. 2, { remittent fever .....	2 months				
{ convulsions .....	*				

In the return for week ending February 20th, deaths were—

(1) Certified by Medical Attendant in .....	1145 cases.
(2) Attested by Coroner .....	50 "
(3) Stated to have had no Medical Attendant .....	29 "
(4) Not certified .....	29 "

TOTAL ... 1253

Deaths under 1st and 2nd heads show a proportion to the total number of 95 per cent. It must be observed, that the term "certified" signifies, that in all cases to which it is applied, a written statement of the cause of death was made by a qualified practitioner.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD—Violence, 22; apoplexy, 4; rupture of a blood vessel, 1; cold and privation, 3; other specified causes, 11; "found dead," "natural," "visitation of God," &c., 9.—TOTAL, 50 cases.

THE NUMBER OF CASES IN WHICH IT IS REPORTED THAT A POST MORTEM EXAMINATION WAS MADE, IS 57.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 27th February, 1847.

Day.	Phases of the Moon.	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning
			Dry			Dew Point	In the sun, as shown by a self-regis- ter Thermometer	Lowest on the grass, as shown by a self-regis- ter Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 19 Diff.	Greatest	Least	General Direction			Pressure in lbs. on the square foot			Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	No electricity was shown at any examination throughout the day.	See General Remarks.	The sky was overcast with cirrostratus and scud throughout the day.
MON.	Positive and tension moderate throughout the day, except from 5h. p.m. till 7h. p.m., when nothing was shown.	See General Remarks.	Overcast with cirrostratus and scud throughout the day. The range of the temperature for this day was remarkably small, being only 2° F.
TUES.	Positive and tension moderate till 6h. a.m. Nothing was shown at any other times.	See General Remarks.	Overcast with cirrostratus and scud till 5h. 10m. p.m.; from this time till midnight the sky was cloudless. The magnets were disturbed in the early part of the morning.
WED.	No electricity was shown till noon. Positive and tension occasionally strong from that time till midnight.	See General Remarks.	Overcast till 6h. p.m. During the remainder of the day one-half of the sky was generally covered with cloud. The magnets were disturbed from 7h. p.m. till 9h. p.m.
THURS.	Positive and tension moderate from 7h. p.m. till midnight. Occasional positive electricity, but very weak, before that time.	See General Remarks.	Overcast till 5h. a.m. From this time till 2h. p.m. one-third of the sky was generally covered with cumuli, cirrostrati, and scud. In the afternoon, with few exceptions, three-fourths of the sky were covered with cirrostratus and scud.
FRI.	Positive and tension occasionally very strong throughout the day.	See General Remarks.	The sky was generally covered with cirrostratus and scud till 2h. p.m. Occasionally cloudless afterwards throughout the day. Snow was falling at about 5h. p.m., and at noon.
SAT.	Positive but very weak till noon. Tension moderate from that time till midnight.	See General Remarks.	Generally overcast till 2h. p.m. The sky was then about one-half covered with cirrostratus, fleecy-clouds, and scud till 5h. p.m. Overcast throughout the remainder of the day. A few flakes of snow were falling occasionally during the morning.

The height of the eistem of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Wheewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 36.2; and the mean reading at 7h. 30m. P.M., was 34.9; the mean readings at the Royal Observatory for the same times were 35.2 and 33.9 respectively.

† The mean direction of the wind for the first two days is W.S.W., and for the remainder of the week, E.

The hygrometrical state of the air during the last four days of this week has been very remarkable, on account of its excessive dryness, exhibiting, in this respect, a greater degree of dryness than during any other period of so long duration since the establishment of the Meteorological Observatory. The temperature of the Dew Point was very frequently from 10° to 18° below that of the air, although the latter was generally below the freezing point; and this continued throughout the whole of each night. The wet bulb thermometer has required frequent examination, and it has read from 2° to 3° below that of the day. The weight of water in a cubic foot of air was less than 1½ grain during this period.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, March 6th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

 Deaths in the districts added in 1847..... 9  
 1008

NOTE.—The above return contains births and deaths which occurred in the sub-district of Fiamstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 18 births and 9 deaths.  
 \* The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.		Area in square Miles	Population Enu- merated in 1841	Weekly Average derived from Deaths of 1842-6, and corrected for increase of Population 5 Winters	DEATHS registered in the Week	BIRTHS registered in the Week

\* The DISTRICT of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 9.

(The tabular abstract on the first page is for the week ending Saturday, Mar. 6th. The following selection of cases is made from the returns for the week ending Feb. 27th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Burns and Scalds:—	duration
Wife of a retired clerk, 65, concussion of the brain from slipping down stairs, while descending	2 hours	M. 68, cut his throat—divided the jugular vein in a temporary state of insanity, of which he	instantly died	In Charing Cross Hospital, son of a labourer, 5, burns of the body and limbs—clothes took fire when left in a room with other children (at 19, Princes Row, Newport Market)—no fire guard	5 hours
M. 28, accidental death by a blow on the head, from a fall down stairs	1 day	M. 41, suicide by cutting his throat with a razor, being of unsound mind	*	In Charing Cross Hospital, son of a tailor, 6, burn of the throat and face—pinafore took fire at the grate, when filling the kettle on the hob	6 days
Son of a labourer, 13, having his head accidentally jammed between certain parts of machinery for polishing glass	instant	Spinster, servant, 26, suicide by cutting her throat in temporary derangement of mind	*	Widow of a cutter, 60, burn of the neck and chest—capstring took fire from a candle which she was carrying in her hand	51 days
F. 5, accidental death from having been run over by a cart and horse	*	Drowning:—		F. 6, accidental death by scalds on the chest from a tea kettle	5 weeks
M. 1, accidental blow on the head, while at play in the street, from a horse passing with a cart	1 hour	F. servant, 26, drowning—suicide—insane at the time from intoxication.		Son of a servant, 2, scalds of the arms from dipping them by falling into a pail of hot soap suds.	
Wounds:—		Wife of a coal porter, 42, found dead, apparently drowned, without marks of violence (in the Regent's Canal, Kingsland Road).		Daughter of a labourer, 6 (no inquest), scald from boiling water	*
M. 34 (post mort.—no inquest), slight cut on right tibia, with an adze	12 days	Hanging and Suffocation:—		Poison:—	
F. 16, hæmatoid tumour on occiput	5 days	Glass cutter (a pauper), 69, suicide by hanging—insane.		Jeweller and watchmaker, 30, poisoning with half an ounce of laudanum	9 hours
M. 51, pulmonary consumption	20 hours	Wife of a shopkeeper and labourer, 59, hanged herself to her bed-rail, in a temporary state of insanity.		suicide—state of mind unknown.	
M. 66, (post mort.) granular degeneration of the kidneys—dilated and hypertrophied heart—disease of aorta and aortic valves—small contracted liver—ascites and anasarca	*	Labourer, 19, found suffocated by the side of a limekiln.			
F. 37, malignant disease of the uterus	3 years				
F. 60 (post mort.), granular degeneration of the kidneys—dilated flabby heart—dropsy—bronchitis	*				
F. 32 (post mort.), granular degeneration of the kidneys—inflammation of the heart—dropsy—bronchitis	*				
F. 30 (post mort.), fever, with incipient ulceration of the bowels—lungs congested—reported to have been ill	12 days				

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	Westminster H.:—No Deaths registered.	duration	Small Pox H.:—	duration
M. 47, inflammation of the bladder	*	Charing Cross H.:—		M. 26, small pox—natural—confluent cum dclirio	12 days
M. 22 (post mort.), disease of the heart, with recent inflammation, and water in the chest	*	F. 23, erysipelas—typhoid fever	*	F. 5, small pox—natural	6 days
M. 51, pulmonary consumption	*	See Violent Deaths.		King's College H.:—	
M. 66, (post mort.) granular degeneration of kidneys—dilated and hypertrophied heart—disease of aorta and aortic valves—small contracted liver—ascites and anasarca	*	Middlesex H.:—		M. 35, phthisis	5 months
F. 37, malignant disease of the uterus	3 years	M. 20, pleuro-pneumonia	4 months	St. Bartholomew's H.:—	
F. 16, hæmatoid tumour on occiput	*	M. 60, pneumonia	3 weeks	M. 68, aneurism	2 years
F. 60 (post mort.), granular degeneration of the kidneys—dilated flabby heart—dropsy—bronchitis	*	M. 26, petechial fever	3 weeks	M. 37, disease of the heart	*
F. 32 (post mort.), granular degeneration of the kidneys—inflammation of the heart—dropsy—bronchitis	*	F. 44, (emphysema pulmonum	*	M. 39, paraplegia	*
F. 30 (post mort.), fever, with incipient ulceration of the bowels—lungs congested—reported to have been ill	12 days	F. 40, anasarca	2 months	M. 42, bronchitis	4 months
		University College H.:—No Deaths registered.		M. 26, anasarca—bronchitis	*
		Fever H.:—		F. 50, bronchitis	*

		M. 77, hæmorrhage . . . . . *			
		F. 12 days, hæmorrhage from the navel. . . *		Intemperance:—No deaths registered from this cause.	
		F. 6 days, exhaustion—bleeding from the navel		Privation:—	
				In Kensington-town, M. 62 (inquest), conges- tion of the lungs, accompanying hyper- trophy of the heart, produced by exposure to cold at nights in an unfurnished room.	
		Malformation:—		Want of Breastmilk:—	
		F. 4 mon., { malformation of cranium. . . . *		F. 2 mon., atrophía ab lactatorum . . . . . *	
		M. 2 (post mort.), imperforated rectum. . . . 3 months		Miscellaneous Causes:—	
		Hernia:—		M. 33, tumour of orbit—excision. . . . . *	
		F. 43, strangulated femoral hernia—operation		F. about 55, exhaustion after great fatigue from ceaseless watching during the past week as a nurse. . . . .	
		F. 54, rupture of the intestines . . . . . *		M. 69, stricture—enlargement and abscesses of prostate gland—disease of kidneys— —rheumatism—inflammation of stomach. . 20 years	
		M. 3 mon., hernia and convulsions . . . . . *		M. 7 mon., { difficult dentition. . . . . 1 month (post mort.) { peritonitis—diseased liver and kidneys—hæmorrhage after lancing the gums. . . . .	
		Diabetes:—			
		M. 54, { diabetes. . . . . many months { coma . . . . . 20 hours			
		Stone:—No deaths registered from this cause.			

In the return for week ending February 27th, deaths were—

(1) Certified by Medical Attendant in . . . . .	922 cases.
(2) Attested by Coroner . . . . .	62 „
(3) Stated to have had no Medical Attendant . . . . .	17 „
(4) Not certified . . . . .	43 „

TOTAL . . . . 1044

Deaths under 1st and 2nd heads show a proportion to the total number of 94 per cent. It must be observed, that the term "certified" signifies, that in all cases to which it is applied, a written statement of the cause of death was made by a qualified practitioner. Besides the 17 cases enumerated above, other deaths which had no medical attendance are probably included under the 2nd and 4th heads.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—From violence, 20; from apoplexy, 4; from ossification of the heart, 1; other diseases of heart, 2; exposure to cold, 1; other specified causes, 19; "natural," "visitation of God," "found dead." &c., 15.—TOTAL, 62 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 37.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension weak at each examination.	See General Remarks.	The sky was overcast with cirrostratus and scud till 9h. p.m. From this time till 11h. p.m. the clouds were extensively broken, but it became overcast again before midnight. Snow and sleet were falling at about 7h. 40m. p.m.
MON.	Positive and tension very weak till 5h. a.m. Positive and tension moderate from 5h. p.m. till 10h. p.m.	See General Remarks.	The sky was covered with cirrostratus and scud throughout the day, except for a short time at about 10h. p.m., when the clouds were slightly broken. The magnets were greatly disturbed from 3h. p.m. till 11h. p.m.
TUES.	No electricity was shown till 1h. p.m. From this time till midnight it was positive and moderately strong.	See General Remarks.	The sky was overcast with cirrostratus and scud throughout the day.
WED.	Positive throughout the day. The tension was very weak from 6h. a.m. till 5h. a.m. Moderately active from that time till 7h. p.m., and very strong from 9h. p.m. till midnight	See General Remarks.	Overcast with cirrostratus and scud till 3h. p.m.; from this time till 6h. p.m. one-half of the sky was covered with cirrostratus and fleecy clouds. At 7h. p.m. it became cloudless, and remained generally so till 11h. 40m. p.m., when clouds came up from the south, and soon covered the sky.
THURS.	Nothing was shown till 5h. a.m. Positive and tension strong throughout the remainder of the day.	See General Remarks.	Overcast with cirrostratus and scud throughout the day. Slight rain was falling occasionally during the afternoon.
FRID.	Positive and tension moderate throughout the day. The maximum took place at 1h. a.m.	See General Remarks.	Overcast with cirrostratus and scud throughout the day. Slight misty rain was falling at intervals during the early part of the morning.
SAT.	Positive and tension very weak till 6h. a.m. Moderately active throughout the remainder of the day. The maximum took place at 5h. 20m. p.m.	See General Remarks.	Overcast throughout the day. Slight rain was falling shortly before midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 36.1; and the mean reading at 7h. 30m. P.M., was 38.9; the mean readings at the Royal Observatory for the same times were 35.5 and 38.3 respectively.

† The mean direction of the wind for the week is N.N.E.

The barometer has been unusually high throughout the week. The maximum (30.407) occurred on March 3rd at noon.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, March 13th, 1847.

Deaths registered in this the eleventh week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—  
 (1840) | (1841) | (1842) | (1843) | (1844) | (1845) | (1846) | (1847)  
 961 | 1007 | 810 | 1010 | 989\* | 1069 | 902 | 1020  
 Deaths in the districts added in 1847..... 6  
 (average of the series of weeks, exclusive of the last) 964

1026

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 19 births and 6 deaths.

\* The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.		Area in square Miles	Population Enume- rated in 1841	Weekly Average derived from Deaths of 1842-5, and corrected for Increase of Population	DEATHS registered in the Week	BIRTHS registered in the Week

\* The DISTRICT of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 10.

(The tabular abstract on the first page is for the week ending Saturday, Mar. 13th. The following selection of cases is made from the returns for the week ending March 6th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Burns and Scalds:—	
In St. George's Hospital, painter and glazier, 36 ( <i>post mort.</i> ), secondary abscess in the left elbow and thigh-joint—fell from a board supported by a ladder when cleaning a skylight, at 74 Eaton-square .....	68 days	In St. Bartholomew's Hospital, son of a surgeon, 7, fracture of the skull and laceration of the brain from the kick of a horse, furiously driven in New Gloucester-street, Hoxton .....	14 hours	In St. George's Hospital, daughter of a labourer, 6, burn on the body and extremities—clothes took fire when left in the room of her aunt, 7, Avery Farm-row, Ebury-square, with a fire without fender or guard .....	about 5 hours.
In St. George's Hospital, labourer, 36, ( <i>post mort.</i> ) secondary deposits in the lungs, following compound fracture of the left leg, which was struck by a piece of timber which fell into the sewer in South Audley-street, where deceased was at work .....	38 days	In Guy's Hospital, labourer, 46, fracture of his right leg, caused by its being jammed between a cart-wheel and a post (at Cherry Garden Stairs, Rotherhithe) .....	14 days	In St. Bartholomew's Hospital, F., servant, 72, burnt by her clothes taking fire whilst alone in her apartment, at Clifton-street, Hoxton, 3 days	
In St. George's Hospital, plumber and glazier, 36, concussion—fracture of the jaw and sternum—fell from the top of his house, No. 22, Palace-street, Pinlicko, when examining the gutter .....	2 hours	In Guy's Hospital, spinster, 63, fracture of her skull from being thrown down by a gig-horse, whilst crossing Cold Harbour-lane, Camberwell .....	7 days	In St. Bartholomew's Hospital, daughter of a smith, 10, burnt by her pinafore taking fire, whilst taking a kettle off the fire, at Gray's Inn-lane .....	12 days
In St. Bartholomew's Hospital, clerk to a builder, 34, compound fracture of his left leg, caused by slipping down in the snow at Islington-green .....	12 days	In St. Thomas' Hospital, clerk and policeman on the Brighton Railway, 41, injuries to his face, and fracture of his right leg, being run against by a railway train at Stout's Nest, on the Brighton railway .....	9 hours	In St. Bartholomew's Hospital, daughter of a labourer, 9, burnt by her clothes taking fire whilst at play, at Fox and Knot-court, Snow-hill .....	4 hours
amputation of leg .....	18 hours	Wounds:—		In St. Bartholomew's Hospital, daughter of a tobacco-pipe-maker, 5 months, burnt whilst in bed by the bed furniture taking fire, at Old-street .....	10 days
In St. Thomas's Hospital, carpenter, 63, mortification of the stump of his left leg, after amputation in consequence of a fracture caused by falling from a scaffold at Westminster-bridge .....	2 months	In St. George's Hospital, milkman, 32 ( <i>post mort.</i> ), tetanus following wound of the left eye, caused accidentally by the lash of a whip, when riding in a cart near Hendon ..	10 days	In St. Thomas' Hospital, son of a printer, 7, burnt by his pinafore taking fire as he was filling a kettle with water, at Park-place, Lock's-fields .....	24 hours
In Guy's Hospital labourer, 20 ( <i>post mort.</i> ), fracture of the skull, caused by falling into the hold of a steam-vessel near St. Katherine's wharf .....	5 hours	In Middlesex Hospital, M. 24 ( <i>no inquest</i> ), erysipelas of the face, supervening upon a cut in the face .....	12 days	In St. Thomas' Hospital, son of a smith, 4, burnt by his pinafore taking fire, whilst standing by the fire, at Joiner-street, Westminster-road .....	4 hours
F. 76 ( <i>no inq.</i> ), { old age. { accelerated by a fall down stairs .....	10 days	Boot-closer, about 33, cutting his throat with a razor, in temporary insanity. ....	a few min.	In Guy's Hospital, wife of a carpenter, 66, burnt by her clothes taking fire whilst alone, at Charles-street, Horselydown, but no evidence of the cause .....	1 day
F. 67, injury of the head from striking it, by falling against a bed-post accidentally .....	2 hours	In St. Bartholomew's Hospital, watch-manufacturer, 48, cutting his throat with a table knife, at Liverpool-road, Islington, (in temporary insanity) .....	3 days	In Guy's Hospital, assistant to the fireman of an iron foundry, 33, scalded by the upsetting of a ladle of hot melted iron, in an iron-foundry at Upper Ground-street .....	10 days
Wife of a tailor, 52, concussion of the brain from falling down stairs accidentally .....	5 days	M. 48, suicide—cut his throat with a razor—being of unsound mind .....	*	In Guy's Hospital, son of a labourer, 2, scalded by the upsetting of a cup of tea, at Phoenix-place, Bermondsey-street .....	6 days
In St. George's Hospital, labourer, 58 ( <i>post mort.</i> ), secondary abscess in the left lung—compound comminuted fracture of left leg—fell when getting out of a waggon drawn by two horses, in the Bath-road—leg crushed by the wheel .....	33 days	Drowning:—		Poison:—	
In Charing Cross Hospital, silver polisher, about 63, delirium tremens, following fracture of the right leg—accidentally pushed down by a woman who was running across the road in Great Queen-street, Long Acre, and run over when on the ground by a hackney cabriolet .....	7 days	Dealer in clothes, 34, found drowned in the River Thames.—No evidence of the cause—(supposed to have been in the water 5 weeks.)		Commercial traveller, 33 ( <i>post mort.</i> ), drinking great part of four fluid drachms of caustic ammonia mixed with water, administered by a friend to remove the effects of intoxication .....	6 hours
		M. 10 months, accidentally drowned by falling from a bed into a pail of water.			
		Suffocation:—			
		Son of a cabinet-maker, 6 months, suffocated accidentally in bed.			
		Daughter of a labourer, 16 days, accidental asphyxia, by the mother's breast.			

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:	duration	Middlesex H.:	duration	St. Thomas' H.:(continued)	duration
M. 61, inflammation of the lungs	*	F. 32, hepatitis	4 months	F. 22, { phthisis	about 6 months
M. 57 (post mort.), granular degeneration of the kidneys—anasarca—enlarged heart—ulceration and perforation of the duodenum—peritonitis	*	F. 44, bronchitis	*	F. 22, { chronic laryngitis	4 months
				F. 22, { tracheotomy	7 weeks
		See Violent Deaths.			
		University College H. :—No Deaths registered.			
		Fever H. :—No deaths registered.			
		Small Pox H. :—No deaths registered.			
		King's College H. :—No deaths registered.			
		St. Bartholomew's H. :—			
		F. 73, natural decay and old age			
		F. 42, congestion of the brain			
		M. 30, anasarca with albuminous urine			
		M. 19, phthisis			
		F. 23, anasarca with albuminous urine			
		F. 57, { strangulated umbilical hernia			
		F. 57, { operation			
		F. 54, ascites—disease of mitral valve			
		F. 36, ovarian dropsy			
		F. 38, emphysema with bronchitis			
		F. 35, disease of the heart			
		London H. :—			
		M. 43, { inguinal hernia			
		M. 43, { strangulated hernia			
		M. 43, { operation			
		M. 42, (post mort.) scirrhus of the rectum			
		St. Thomas' H. :—			
		M. 72, erysipelas of extremities and general debility			
		M. 60, came in with cataract, and subsequently had erysipelas, and disease of the membranes of the brain			
		Guy's H. :—			
		M. 50, stricture and extravasation			
		M. 41, bronchitis			
		M. 63, { malignant ulcer of pharynx			
		M. 63, { erysipelas and pneumonia			
		M. 19, phthisis			
		F. 27, phthisis			
		F. 47, primary disease uncertain—acute peritonitis			
		F. 40, bronchitis and emphysema—ascites—peritonitis			
		F. 21, { phthisis			
		F. 21, { pneumothorax of left side			
		F. 37, { fever			
		F. 37, { arachnitis (?)			
		F. 61, { albuminuria			
		F. 61, { coma			
		M. 15, (post mort.) fever—pleurisy—pericarditis—peritonitis			
		M. 74, bronchitis—emphysema—acute bronchitis			
		Dreadnought H. :—			
		M. 41, { phlegmonous erysipelas of left arm, terminating in gangrene			
		M. 41, { pus in left pleura and in various joints			
		M. 41, { scorbutic symptoms			
		M. 57, { effusion of blood into pericardium, and pericarditis			
		M. 57, { blood in pericardium, and serum in pleura and abdomen			

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox:—	duration	Remittent Fever:—	duration	Childbirth:—(continued)	duration
M. 4, confluent small pox (never vaccinated)	2 weeks	F. 6, remittent fever with hydrocephalus	3 weeks	F. 18, { childbirth	8 days
M. 7, confluent small pox (never vaccinated)	2 weeks			(p.m.) { puerperal peritonitis	5 days
				F. 22, puerperal convulsions	24 hours
The Registrar adds that the above cases occurred in a family out of which five within three weeks have died from small pox. The sixth (alone left) was lying dangerously ill of the same disease. The parents have repeatedly refused to have their children vaccinated. Haggerstone West, Shoreditch.					
		Infantile Fever:—			
		F. 2, infantile remittent fever			
		Syphilis, &c. :—			
		M. 1, syphilis and marasmus			
		M. 28, { syphilis			
		M. 28, { typhus			
		F. 3 mon. { syphilis			
		F. 1, syphilitic lepra			
		F. 39, secondary venereal disease			
		Hæmorrhage:—			
		F. 8 days, hæmorrhage from the umbilicus			
		F. 78, epistaxis			
		M. 37, suffocation from rupture of a blood-vessel into the lungs			
		Malformation:—			
		F. 17 days, (post mort.) malformation and disease of heart			
		F. 25, { spinal and chest distortion			
		F. 25, { it increased so as to diminish the capacity for lungs			
		M. 12 weeks, cyanosis			
		F. 16 days, malformation of palate—inanition			
		F. 2 days, defective structure of the heart			
		F. 3 days, spina bifida			
		Hernia:—			
		M. 20, { strangulated intestine			
		M. 20, { prostration and secondary fever			
		M. 28, strangulation of intestine—rupture			
		M. 64, hernia			
		See Returns of London and St. Bartholomew's Hospitals.			
		Diabetes:—			
		F. 20, { diabetes			
		F. 20, { phthisis			
		Stone:—No deaths registered from this cause.			
		Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.			
		F. 40, { premature labour			
		F. 42, { exhaustion			
		F. 42, { puerperal fever, terminating in atrophy			
		F. 17, { childbirth			
		F. 17, { puerperal fever			
		F. 47, exhaustion consequent on many years of ill health, arising from injuries during confinement			
		Phthisis and Childbirth:—			
		F. 43, { phthisis pulmonalis			
		F. 43, { premature labour, causing rupture of pulmonary vessel of the heart			
		F. 37, { phthisis			
		F. 37, { childbirth			
		Tumor and Childbirth:—			
		F. 20, { ovarian tumor			
		F. 20, { pregnancy—premature delivery			
		F. 20, { inflammation and mortification of tumour			
		Delirium Tremens:—			
		M. 54, delirium tremens			
		M. 43, { delirium tremens (third attack)			
		M. 60, delirium tremens			
		M. 67, delirium tremens			
		M. 47, delirium tremens			
		M. 52, delirium tremens			
		M. 73, delirium tremens			
		Hæmatemesis and Delirium Tremens:—			
		M. 33, { hæmatemesis			
		M. 33, { delirium tremens			
		Intemperance:—No deaths registered from this cause.			
		Privation:—No deaths registered from this cause.			
		Weaning:—			
		M. 1, weaning—atrophica			
		Miscellaneous Causes:—			
		M. about 10 months, { general debility			
		M. about 10 months, { "pledge" left in a box at a pawnbrokers's shop			
		F. 14 days, { phlegmonous erysipelas			
		F. 14 days, { resulting from puerperal fever of the mother			
		F. 14 days, { convulsions			
		M. 16 days, phlegmonous inflammation on the arm and leg, resulting from puerperal disease in the mother			

In the return for week ending March 6th, deaths were—

(1) Certified by Medical Attendant in	898 cases.
(2) Attested by Coroner	60 "
(3) Stated to have had no Medical Attendant	14 "
(4) Not certified	36 "

TOTAL...1008

Deaths under 1st and 2nd heads show a proportion to the total number of 95 per cent. It must be observed, that the term "certified" signifies, that in all cases to which it is applied, a written statement of the cause of death was made by a qualified practitioner. Besides the 14 cases enumerated above, other deaths which had no medical attendance are probably included under the 2nd and 4th heads.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—From violence, 32; from apoplexy, 2; from ossification of the coronary artery, 1; disease of heart, 1; rupture of pulmonary artery, 1; other specified causes, 11; "found dead," "natural death," "visitation of God," &c., 12.—TOTAL, 60 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 41.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 13th March, 1847.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND					Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning
			Dry			Dew Point	Highest in the sun, as shown by a self-register- ing Thermometer	Lowest on the grass, as shown by a self-register- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 19 Days	Greatest	Least	General Direction			Pressure in lbs. on the square foot			Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension weak at each ex- amination.	See General Remarks.	The sky was overcast throughout the day. The prevailing clouds were cirrostratus and scud. A few drops of rain fell at 9h. 20m. a.m.
MON.	Positive throughout the day. The tension was moderately active from 6h. a.m. till noon; weak from that time till 6h. p.m.; moderately active afterwards from mid- night.	See General Remarks.	With the exception of small breaks that occurred at 1h. 30m. p.m., the sky was covered with cirrostratus and scud throughout the day. Thin rain was falling at 1h. 30m. a.m., at 8h. p.m., and at midnight.
TUES.	The electricity shewn during the day was positive and very weak; at frequent ex- aminations nothing was shewn.	See General Remarks.	The sky was generally overcast till 3h. p.m.; from this time till 10h. p.m. nearly one-half was covered with cloud: afterwards the clouds gradually increased, and by midnight it was completely overcast. The prevailing clouds were cirrostratus and scud. Snow was falling slightly at 3h. 30m. p.m., and at midnight.
WED.	No electricity was shewn till 9h. a.m.; it was afterwards positive with moderately strong tension for the remainder of the day.	See General Remarks.	Overcast with cirrostratus and scud till 1h. 30m. p.m. The amount of cloud was afterwards variable until 7h. 30m. p.m., cloudless from this time till midnight. Snow was falling slightly at intervals during the afternoon.
THURS.	Positive and tension weak throughout the day.	See General Remarks.	The sky was nearly cloudless till 9h. a.m.; the amount of cloud was afterwards very variable during the day till 9h. p.m.; overcast from this time till midnight.
FRID.	Strong positive electricity, with frequent sparks, was exhibited from 1h. a.m. till 5h. a.m. And very little was shewn during the remainder of the day.	Snow falling. See General Remarks.	Overcast till 6h. a.m.; the amount of cloud was afterwards small till 9h. a.m., when the sky became cloudless; throughout the remainder of the day till near midnight about one-half was covered: at midnight it was overcast. Snow was falling from 1h. a.m. till 5h. a.m.
SAT.	Positive and tension moderate from 9h. a.m. till noon. Nothing was shewn at any other times.	See General Remarks.	The sky was overcast throughout the day, except at about 3h. a.m. and 7h. a.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 32.5; and the mean reading at 7h. 30m. p.m., was 31.5; the mean readings at the Royal Observatory for the same times were 36.5 and 35.1 respectively.

† The general direction of the wind for the week is N. and S.W.

March 10d. & 11d. were very remarkable for the low temperature of the air: on the former the temperature was 11.3, and on the latter 14.0 below the daily average. On the morning of the 11th day the reading of the thermometer was 16.9, a remarkably low reading occurring at a time so near the vernal equinox. The hygrometrical state of the air during the 11th day was even more remarkable, on account of its extreme dryness at such low temperatures. At times during this day the temperature of the dew point was 18° below that of the air, the latter being 28.0, and the wet bulb thermometer-reading at the same time being about 24.8. The average temperature of the dew point for the day, as is shown above was 15°, being 12.8 below that of the air. During this day the average elastic force of vapour was only 0.107 in., showing that, if all the vapour then held in solution in a vertical column of the whole atmosphere were precipitated, it would have produced only 1.5 inches of water. The weight of vapour in a cubic foot of air was only 1.3 grains. The degree of humidity was 0.6, that of complete saturation being represented by 1; and the weight of a cubic foot of air in its average state was 571 grains. So far as Mr. Glaisher's experience extends he has never met with a day similar to this one, in respect to the great differences of the temperature of the air, of evaporation, and of the dew point at such low temperatures.

# Births and Deaths registered in London,

During the Week ending Saturday, March 20th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 12.]

5 Winters.

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population

Males .....	542
Females .....	526
Total .....	1068

Deaths registered in the Week

Males .....	547
Females .....	567
Total .....	1114

Births registered in the Week

Males .....	772
Females .....	745
Total .....	1517

Deaths registered in this the twelfth week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—  
 (1840) 896 (1841) 882 (1842) 788 (1843) 1001 (1844) 981 (1845) 1197 (1846) 880 (1847) 1104  
 Deaths in the districts added in 1847..... 10  
 (average of the series of weeks, exclusive of the last) 946

1114

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 26 births and 10 deaths.

The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1841. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

\* The age of one person, whose death is ascribed to *hooping cough*, and the ages of two, whose deaths are ascribed to *violence*, are not stated.

† A pensioner is reported to have died in Chelsea Workhouse at the advanced age of 100 years.

DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.		Area in square Miles	Population Eneume- rated in 1841	Weekly Average derived from Deaths of 1842-6, and corrected for Increase of Population 5 Winters	DEATHS registered in the Week	BIRTHS registered in the Week

\* The DISTRICT of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 11.

(The tabular abstract on the first page is for the week ending Saturday, Mar. 20th. The following selection of cases is made from the returns for the week ending March 13th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Burns and Scalds:—	duration
M. 63, natural death, but may have been accelerated by a fall .....	sudden	F. 81, { old age. fracture of the neck of the femur, (no inquest) within the capsule .....	4½ months (It should have been stated how the fracture was caused.)	Daughter of a labourer, 8, injuries accidentally received from being burnt .....	*
Hawker of fish, 67, paralysis from injury to the spinal column, by falling out of a cart at Blackheath, Kent.....	4 days, 12 hours	Wounds:—		M. 5, burns from pinafore catching fire, by standing close to the grate, unguarded ....	1 day
Labourer, 40, accidental death from a blow on the back by a screw-propeller, caused by the breaking of a chain .....	*	Daughter of a mariner, 3, accidental death from a cut throat, the external jugular vein being divided .....	*	F. 2, burns—clothes caught fire in the absence of the mother .....	*
Hosier, 50, injuries to the body by the moving crank of a steam-engine on board the "Starlight" steamboat, in the River Thames, off Richmond Terrace. Fell on the engine, which was insufficiently protected, through the partially open skylight of the engine room, when disengaging himself from his son-in-law, who was endeavouring to pull him from the deck to the cabin, the deceased having been in a state of intoxication (both passengers on board the boat) .....	instant	Drowning:—		F. about 70, mortal injuries from an accidental burn .....	*
		Wife of a labourer, supposed 40 (post mort.), drowned wilfully by some person or persons unknown.		F. 35, burnt by her clothes taking fire whilst intoxicated, found dead .....	*
		Suffocation:—		Poison:—	
		M. 29 (post mort.), an epileptic fit, causing a fall and congestion of the brain, and suffocation in some night soil.		Assistant to a Chemist, 20, suicide with prussic acid .....	20 min.
				Not known to be insane, though eccentric.	
				M. 28, laudanum—suicide in unsound mind ..	*
				Wife of a blacksmith, 23, suicide with arsenic, being at the time in a temporary state of insanity.....	*

### FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	St. George's H. continued:—	duration	Middlesex H. continued:—	duration
M. 63, gangrene of legs, and inflammation of the face .....	*	M. 40 (p.m.), renal anasarca—effusion into the cavity of the pleura .....	*	{ disease of the kidneys.....	*
M. 19, ulceration of the cartilages of the knee and hipjoints. ....	*	Westminster H.:—		F. 21, { anasarca. ulceration of the ilium and large intestines.	*
M. 42 (post mort.), enormous enlargement of the spleen, together with a peculiarly altered condition of the blood .....	*	M. 51, { encephaloid disease of the lungs....	* —months	F. 55, typhus .....	*

				F. 40, syphilitic cachexia .....	*

## FOURTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued).—

## University College II. (continued).—

The following cases, which were registered in the week ending 27th Feb., should have been classed as having occurred in this hospital.

M. 36, morbus Brightii—anasarca—ascites—hydrothorax	*
M. 30, continued fever—laryngitis	*
M. 33, {tumour of orbit	*
{excision	*
F. 22, continued fever	*

Fever II.:—No deaths registered.

Small Pox II.:—No deaths registered.

King's College II.:—No deaths registered.

## St. Bartholomew's II.:—

M. 78, {strangulated inguinal hernia	*
{operation—exhaustion	3 days
M. 42, disease of the heart and drop-sy.	*
M. 31, phthisis and erysipelas.	*
M. 14, necrosis of the femur, with extensive abscesses of the thigh	*
F. 20, paralysis	*

## London II.:—

F. 40, {strangulated femoral hernia	2 days
{operation	1½ hours
F. 4, strumous disease of upper jaw, consequent on fever	*

St. Thomas' II.:—

F. 20, {rheumatic pericarditis	18 months
{disseminated kidneys, acute pleurisy	10 days
M. 28, diseased liver and kidneys	*
M. 44 (post mort.), abscess of the hip-joint— hectic fever	*
M. 22, fever	29 days
M. 38, phthisis	1 year

## Guy's II.:—

M. 14, {malignant disease of bladder	*
{œdema of kidney	*
M. 25, {pneumonia—phthisis	4 months
{ulceration of small intestines	*
{strumous disease of bronchial glands	*
F. 30, {ulceration of large bronchial tube of left lung, and corresponding portion of pulmonary artery	10 min.
{sudden hæmoptysis	10 min.

## Dreadnought II.:—

M. 46, {bronchitis	3 weeks
{emphysema of lungs	*
{contracted aortic orifice.	*
M. 20, phthisis	9 months
M. 48, {dropsy	4 days
{erysipelas and delirium tremens	60 hours
{slight serous effusion into pleura	*
{congestion of kidneys; fatty liver.	*

## Unit II.:—

M. 57 (p.m., inq.), inflammation and mortification of the back of the throat.	*
M. 27 (p.m., inq.), inflammation of the lungs and brain.	*
M. 51 (inq.) mesenteric disease and consumption	*
M. 33 (inq.), disease of the liver—dropsy and bronchitis	*
M. 73 (inq.), bronchitis	*
M. 20 (inq.), epileptic fits and bronchitis	*
M. 69 (inq.), disease of the bladder and kidneys	*

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, ETC.

## Small Pox:—

F. 4 mon., variola confluent	1 week
------------------------------	--------

It should have been stated whether the child had been vaccinated.

M. 1, {small pox	10 days
{after previous vaccination.	8 days
F. 2 mon., small pox (not vaccinated)	10 days
F. 5 mon., confluent small pox (natural)	8 days
M. 32, {confluent malignant small pox	14 days
{vaccination performed within 14 days of death.	1 week

## Varicella:—

M. 1 mon., varicella	*
----------------------	---

## Typhus, &amp;c.:—

M. 4, fever	1 month
M. 7, typhus fever	3 weeks
F. 29, typhus fever	3 weeks
F. about 50 (inquest), typhus fever	18 days
F. 13, fever with affection of the head	11 days
M. 59, irritative fever	4 days
M. 4, {low fever	2 days
{cerebral disease.	2 days
M. 50, typhus	*
M. 75, typhus	*
M. 37, fever and pneumonia	6 days
M. 34, fever—continued hiccup—pericarditis—pneumonia	7 days
F. 26, typhus fever	3 weeks
M. 9, synochus	19 days
M. 1, fever	14 days
F. 27, {congestive fever	4 days
{effusion on the brain	12 days
M. 47, typhus fever	2 weeks
M. 57, febris	*
M. 28, fever	*
M. 3 mon., fever—marasmus	4 weeks
F. 13, fever	20 days
M. 10, typhus fever	15 days
F. 31, jaundice—typhus fever	14 days
M. 1, dentition—fever and convulsions—hydrocephalus	14 days
M. 68, fever	*
M. 40 (inquest), natural death—congestion of the lungs from low fever	*
M. 28 (inquest), natural death—congestion of the brain from low fever	*
M. 8 (post mort.), gastric fever	15 days
M. 6, typhus fever	*

See Hospital Returns.

## Syphilis, &amp;c.:—

M. 2 mon., syphilis	from birth
F. 3 mon., {syphilitic taint	from birth
{convulsions	*
M. 26 days, syphilis	from birth
M. 5 weeks, {syphilis	1 day
{convulsions	*
M. 63, syphilis—decay	*

See Return of University College Hospital.

## Hæmorrhage:—

F. 4 days (post mort.), internal hæmorrhage into the cavity of the abdomen	*
F. 70, epistaxis (some days without advice)	*
F. 1 (inquest), natural death from hæmorrhage, sudden	*
M. 62, (inquest) natural death—rupture of a vessel internally	sudden
M. 73 (inquest), natural death from the giving way of a vessel of the thorax	*

Other cases of hæmorrhage are included under apoplexy, &c.

## Malformation:—

F. 4 days, {anus imperforatus	42 hours
{operation	*
M. 24 hours, congenital malformation of the heart	*
M. 8 mon., spina bifida	*
F. 10 hours, imperfect heart	*
F. 9 days, cyanosis	from birth
M. 5 weeks, malformation (no medical attendant)	*

## Hernia:—

F. 83, {strangulated femoral hernia	3 weeks
{would not submit to an operation.	*

See Returns of St. Bartholomew's and London Hospitals.

## Diabetes:—No deaths registered from this cause.

## Stone:—

M. 2 (post mort.), stone in the bladder, and disease of the kidneys	*
M. 87, {enlarged prostate	*
{hypertrophied bladder containing three calculi	— years
{retention of urine	2 weeks

## Scrofula and Stone:—

M. 3, scrofula	*
(p.m.) {renal calculus	1 year
{phthisis	*

## Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.

F. 33, {parturition	13 days
{apoplexy	5 days
F. 21, {confinement	4 days
{puerperal fever	2 days
F. 21, {puerperal peritonitis	4 months
{ascites	15 days
F. 23, {childbirth	4 days
{hysteritis	4 days
F. 26, puerperal fever	*
F. 22, puerperal fever	2 days
F. 24, {difficult parturition	*
{puerperal peritonitis	3 days
F. 20, puerperal fever	6 days
F. 22, parturition—diarrhoea	14 days

## Disease of Heart and Childbirth:—

F. 23, {morbus cordis	2 months
{delivery	4 days

## Phthisis and Childbirth:—

F. 41, {phthisis	18 months
{delivery of a still-born child	40 hours

## Delirium Tremens:—

M. 47, delirium cum tremore	*
M. 40, delirium tremens	*

## Intemperance:—

F. 59, (inquest) natural death from apoplexy, accelerated by excessive drink	*
--	---

## Privation:—

In the district of Mile-end, Old Town (Lower) widow of a plumber, 51, (inquest) natural death, accelerated by want and privation	*
--	---

## Want of Breastmilk:—

M. 6 weeks, (inquest) natural death—debility from want of sufficient breastmilk	*
---	---

## Miscellaneous Causes:—

F. 38, {ovarian dropsy	18 years
{anasarca and ascites	5 months
F. 64, {ovarian dropsy	10 years
{gangrene of right foot	2 months
F. 1, {strumous caries of the parietal bone	9 months
{serous effusion into the arachnoid, and ventricles of the brain	7 days
{organic contraction of intestines	many months
{bronchitis	3 weeks
F. 63, {subacute peritonitis	a few days
{kidneys very congested—intestines organically diseased by contraction at various parts of small intestines—peritonitis principally affecting liver. (abdomen only opened.)	*
M. 39, {gastritis	2 days
{cirrhosis	*

In the return for week ending March 13th, causes of deaths were—

(1) Certified by written statement of Medical Attendant in	899 cases.
(2) Attested by Coroner, or stated by him to be not ascertainable, in	74 „
(3) Stated to have had no Medical Attendant in	14 „
(4) Not certified in	39 „

TOTAL... 1026

Deaths under 1st and 2nd heads show a proportion to the total number of nearly 95 per cent.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD—Violence, 15; Apoplexy, 10; disease of heart, 7; intemperance, 1; privation, 1; want of breast-milk, 1; specified causes, 30; "natural death," "visitation of God," "found dead," &c., 9.—TOTAL, 74.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 38.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive at each examination.	See General Remarks.	The sky was cloudless till 9h. 30m. a.m.; and from this time till 9h. p.m. it was mostly covered with thin cirrostratus clouds; cloudless afterwards till midnight.
MON.	Positive with tension moderately strong; the max. occurring at 6h. a.m.	See General Remarks.	With the exception of some light cirrus clouds, that prevailed at 2h. p.m., the sky was cloudless throughout the day.
TUES.	Positive with tension moderately strong; the max. occurring at about 10h. a.m.	See General Remarks.	The sky was cloudless till noon; from that time till 7h. 30m. p.m., light cirrostratus clouds were prevalent; cloudless afterwards till midnight.
WED.	Positive with tension moderately strong; the max. occurring at about 10h. p.m.	See General Remarks.	The sky was cloudless throughout the day, except between 5h. a.m. and 7h. a.m., when some light cirrostratus clouds prevailed.
THURS.	Positive with tension moderately strong; the max. occurring about noon.	See General Remarks.	The sky was cloudless throughout the day.
FRI.	Positive with tension moderately strong; the max. occurring about 10h. a.m.	See General Remarks.	The sky was cloudless till 7h. p.m.; from that time till midnight it was partially covered with cirrostratus; these were the first clouds to any amount since 17d. 7h. 2m. An aurora of more than ordinary brilliancy was visible this evening. It consisted generally of an arch of about 2° in breadth, and of intense brilliancy and distinctness, which passed in an oblique direction through the constellation Orion. In the early part of the evening it extended from α Orionis to a point between Castor and Pollux, but it afterwards appeared to move towards the south, passing through the belt of Orion and through Pollux. Near 11h. it exhibited streamers which seemed to point towards the Polar star. Its colour was a silvery white. The magnets were greatly disturbed during the whole of the evening.
SAT.	No electricity was shown till 7h. 20m. a.m.; after which time it became positive with moderately strong tension, and continued so till 5h. 20m. p.m. Positive and weak afterwards till midnight.	See General Remarks.	The sky was overcast till noon; from that time till midnight about three-fourths were covered with cirrostratus, cumulostratus, and scud. The magnets were disturbed at midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10 and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 41.8; and the mean reading at 7h. 30m. P.M., was 49.6; the mean readings at the Royal Observatory for the same times were 41.3 and 48.5 respectively.

† The general direction of the wind for the week is S.S.W.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, March 27th, 1847.

ANNUAL SERIES VIII.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. [No. 13]

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population		5 Winters.		Deaths registered in the Week		Births registered in the Week			
Males .....	542	Males .....	484	Males .....	691				
Females .....	526	Females .....	545	Females .....	685				
Total 1068		Total.. 1029		Total.. 1376					
Deaths registered in this the thirteenth week of the first quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—									
(1840)	(1841)	(1842)	(1843)	(1844)	(1845)	(1846)	(1847)	(average of the series of weeks, exclusive of the last) 1005	
991	901	850	961	1080	1188	1065	1023		
Deaths in the districts added in 1847.....								6	

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 19 births and 6 deaths.

The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

\* A man is reported to have died in the sub-district of Lambeth Church (2nd part), of debility, at the advanced age of 102 years 10 months.

\* The DISTRICT of Lewisham and Sub-district of Hampstead were added to "London" in the week ending 2nd January; the Births and Deaths therefore are not contained in the previous weeks.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 12.

(The tabular abstract on the first page is for the week ending Saturday, Mar. 27th. The following selection of cases is made from the returns for the week ending March 20th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Hanging and Suffocation (continued):—	duration
In Westminster Hospital, shoemaker, 77, shock of the system—fracture of the neck of the femur when stepping on to the kerb stone in Little Chapel-street.....	3 days	In University College Hospital, M. 45, crysipelas of the arms, &c. following a division of the brachial artery by the fall of a chisel, 1 month		M. 45, suicide by hanging, being insane from habits of intemperance.	
In University College Hospital, M. 68 (post mort.), injuries of the head from a fall ....	5 days (how he fell unknown.)	At Walham-green, smith and farrier, 67, found dead—suicide by cutting his throat with knives—insane at the time.....	*	Burns and Scalds:—	duration
Bricklayer's labourer, 66, injuries of the head from a fall while stepping from a ladder on to a scaffold—lived insensible .....	1 week	Wife of a tailor, 34, suicide—cut her throat with a razor—at the time insane .....	*	In University College Hospital, F. 8, burns from pushing her pinafore into the fire in absence of the servant, and without a fire-guard.....	*
Widow of a millwright, 79, fractura cervicis femoris .....	7 days (no inquest), caused by falling over a piece of carpet on the floor.	NOTE.—A girl, aged 2 years, died of tetanus, 1 month It should have been stated whether traumatic or otherwise, and how it arose.		Daughter of an optician, 2, mortal injuries from an accidental burn .....	*
M. 78 (no inq.), shock to the system by an accidental fall .....	37 hours	Drowning:—		Daughter of the keeper of a coffee and beer-shop, 1, scalded accidentally .....	25 hours
M. age (unknown) accidentally run over by a waggon in the City-road.....	sudden	Traveller for an ironmonger, about 64, found dead in the Thames near Putney-bridge—drowning, not known how he came into the water—probably suicide.		Son of a house-decorator, 1, { phthisis... .. severe scald of the back and leg, caused by the tilting of a sauce-pan.....	3 weeks
F. 75, { fracture of the neck of the thigh bone within the capsule..... 6 weeks sloughing of nates (bed sores)..... 4 weeks age and debility.		M., age unknown, found dead without marks, apparently drowned (under water some weeks.)		Poison:—	
Query, How was the fracture caused?		Cabin boy, 16, drowned by falling out of a barge into the River Thames accidentally.		F. 10 weeks (post mort.), congestion of the lungs and brain from natural causes—the evidence afforded strong reason for believing that narcotism from a wrong medicine caused the death .....	*
F. 74 (no inq.), concussion of the brain, and fracture of acromion from a fall.....	*	Carman, 39, accidentally drowned by going into the Surrey Canal to rescue a horse.		Neglect:—	
Query, How was the injury caused?		M. about 30, unknown—found dead in the River Thames—no marks of violence—no proof how he came into the water.		M. newly born, wilful murder against some person or persons unknown—hemorrhage from the umbilical cord wilfully neglected to be tied.	
Wounds:—		Hanging and Suffocation:—		Exposure:—	
In University College Hospital, M. 53, pneumonia during a wound of the wrist, from the breaking of a glass tube he was using.....	*	F., servant, 19, suicide by hanging.		M. newly born, exposure at birth without medical aid, and so wilfully murdered by persons unknown.	
		Wife of an omnibus conductor, 29, hanged herself in a temporary state of insanity.			

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

F. 26, { small pox	12 days	(p.m.) { gorged veins of brain and sinuses—effusion into arachnoid and ventricles—thickening of arachnoid at base of brain—both lungs loaded with miliary tubercles.	*	F. 31, (inquest), childbirth	*
{ vaccinated several years ago.	*	F. 8 months, remittent fever—pneumonia	*	F. 32, puerperal fever	5 days
Typhus, &c.:—					
M. 11, fever	*	Infantile Fever:—			
F. 67, common continued fever	3 weeks	M. 1 month, infantile fever	3 days	Syphilis:—	
F. 3, synochus	11 days	No deaths registered from this cause.			
F. 54, { fever	1 month	Hæmorrhage:—			
{ diseased brain	of long standing	M. 61, (inquest) natural death—rupture of a vessel	sudden	M. 19 days, marasmus, from want of proper nourishment	
M. 4, { bronchitis	10 days	Malformation:—			
{ typhus	*	M. 14, { malformation of heart.	*	See Returns of St. Thomas' Hospital.	
F. 1, { fever	2 months	{ asphyxia	*	Want of Breastmilk:—	
{ abscess on the back	*	F. 2 days, imperfect closure of the foramen ovale.	*	M. 2, { bringing up by hand	from birth
F. 59, typhus	*	Hernia:—			
M. 6, gastric fever	8 days	M. 64, (inquest), strangulation of the intestines	*	{ takes mesenterica	3 months
M. 43, inflammation of the throat, with typhoid fever—bronchitis	*	F. 76, { strangulated femoral hernia	9 days	Miscellaneous Causes:—	
F. 76, fever	10 days	{ peritonitis	*	M. 100, natural decay. The deceased, who was a pensioner of the army, had been an inmate of Chelsea Workhouse more than 50 years. He received 9 shillings per week, and therefore paid for his maintenance. For a number of years he has taken half-a-pint of gin daily, which he generally swallowed at a single draught; but he enjoyed excellent health till a short time previous to his death. He was a native of Scotland, and born in June, 1746.	
M. 72, fever	6 weeks	See Hospital Returns.			
M. 19, typhus	4 weeks	Diabetes:—No deaths registered from this cause.			
M. 5, febris typhoides	16 days	Stone:—			
{ low fever, from contact with the mother, who had typhus	*	M. 32, { stone in the bladder	12 to 15 years	M. 47, (post mortem), acute laryngitis, with œdema of the glottis	
{ inauition, from want of natural nutriment	*	{ operation—exhaustion, debility	9 days	{ ovarian dropsy	
F. 11 mon., { bronchitis	19 days	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.			
{ typhus fever	*	F. 35, { difficult labour from malposition of child	*	{ inflammation and sloughing	
F. 2, fever—hydrocephalus	*	{ flooding	3 days	Three children born at a birth, died in half an hour of "debility from premature birth."	
F. 20, typhus	22 days	{ childbirth	5 days	NOTE.—The three deaths following occurred in one family, at 47 Wootton-street, Cornwall-road.	
M. 3, typhus fever	14 days	F. 22, { puerperal fever	*	F. 2, scarlet fever, attended with inflammation of the lungs	
F. 74, { typhus	1 month	F. 41, { phlegmasia dolens	3 weeks	{ low fever	
{ gangrenæ senilis	10 days	{ childbirth	10 days	F. 5, scarlet fever—typhus fever	
M. 68, fever	9 days	F. 36, { puerperal fever	*	F. 7, scarlet fever—typhus fever	
F. 2, { gastric fever	3 weeks	F. 30, febris puerperalis	*	The Registrar adds that other two members of the family were dangerously ill.	
{ dentition—convulsions	8 days	F. 32, hæmorrhage, consequent on placenta prævia	*		
M. 57, fever	*				
M. 8, fever	15 days				
F. 42, fever—bronchitis	6 days				
F. 27, { low fever	7 days				
{ typhoid fever	3 days				
F. 14, fever—cerebral inflammation	*				
M. 5, typhus—pertussis	2 months				

In the return for week ending March 20th, causes of deaths were—

(1) Certified by written statement of Medical Attendant in	992 cases.
(2) Attested by Coroner, or stated by him to be not ascertainable, in	57 "
(3) Stated to have been without Medical Treatment in	24 "
(4) Not certified in	41 "

TOTAL...1114

Deaths under 1st and 2nd heads show a proportion to the total number of 94 per cent. Besides the 24 cases enumerated above, others, which had no Medical Attendance, are probably included under the 2nd and 4th heads.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Deaths from violence, 23; from apoplexy, 2; from disease of heart, 1; from spasm of epiglottis, 1; from childbirth, 2; from other specified causes, 17; "found dead," "natural death," "visitation of God," &c., 11.—TOTAL, 57 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was held, is 33.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 27th March, 1847.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive at each examination.	See General Remarks.	Three-fourths of the sky were covered with cirrostratus, cumulostratus, and scud until 4h. p.m.; after that time the clouds gradually dispersed, leaving the sky cloudless: the sky remained clear till midnight.
MON.	Positive and weak throughout the day; the max. occurred at 7h. 30m. p.m.	See General Remarks.	With the exception of some light clouds that prevailed at 3h. 30m. a.m., and at 9h. 30m. a.m., the sky was cloudless till near noon; generally overcast afterwards with cirrostratus and scud till midnight.
TUES.	Positive and weak throughout the day; the max. occurred at 7h. 30m. p.m.	See General Remarks.	Overcast till 2h. a.m.; at 3h. 30m. a.m. about one-half of the sky was covered; nearly cloudless from that time till noon; overcast from noon until 6h. p.m., and cloudless afterwards till midnight. Rain fell at frequent intervals during the afternoon.
WED.	Positive at each examination: the max. occurred at 9h. 20m. p.m.	See General Remarks.	The sky was overcast till noon; from that time till 6h. p.m. the amount of cloud was variable: cloudless afterwards till midnight.
THURS.	Positive with strong tension: the maximum occurred at noon, and 9h. 20m. p.m. At midnight nothing was shewn.	See General Remarks.	Cloudless till noon; from that time till 11h. p.m. light clouds of small amount prevailed; overcast afterwards till midnight.
FRID.	No electricity was shewn till 7h. 30m. a.m., when it became positive with weak tension; nothing was shewn from that time till 1h. 30m. p.m.; afterwards positive with moderately strong tension till 7h. 30m. p.m.: from that time till midnight slightly positive.	See General Remarks.	Overcast till 6h. a.m.; from that time till 6h. p.m. three-fourths of the sky were covered, except at 1h. 30m. a.m., when the amount of cloud was small: nearly cloudless from 6h. p.m. till midnight. The prevailing clouds were cirrostratus, cumulostratus, and scud. A shower of rain fell at 1h. 30m. a.m.
SAT.	Positive and weak till 4h. a.m.; from that time till 7h. 30m. a.m. strong electricity was shewn; nothing was shewn from the last mentioned time till noon; positive with moderate tension afterwards till midnight. The max. occurred at 7h. 30m. a.m.	See General Remarks.	Cloudless till 3h. 30m. a.m.; from that time till 3h. 30m. p.m. the sky was generally overcast; the amount of cloud was afterwards variable till midnight. Cirrostratus, cumulostratus, and scud, were the prevailing clouds. A few drops of rain fell during the afternoon. A perfect lunar halo was observed at 7h. p.m., whose radius was 23°.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 39.1; and the mean reading at 7h. 30m. P.M., was 45.6; the mean readings at the Royal Observatory for the same times were 37.4 and 47.6 respectively.

† The mean direction of the wind for the week is S.W.

# A TABLE OF Births and Deaths registered in London,

During the Week ending Saturday, April 3rd, 1847.

Deaths in the districts added in 1847..... 7

1004

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 19 births and 7 deaths.

The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

\* The age of one person, whose death is assigned to effusion on the brain, is not stated.

DISTRICTS OF LONDON, Comprising 135 Registrars' Districts.		Area in square Miles	Population Enu- merated in 1841	Weekly Average derived from Deaths of 1842-6, and corrected for Increase of Population	DEATHS registered in the Week	BIRTHS registered in the Week

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 13.

(The tabular abstract on the first page is for the week ending Saturday, April 3rd. The following selection of cases is made from the returns for the week ending Mar. 27th).

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds (continued):—	duration
In St. George's Hospital, gardener, 40, natural, fracture of left thigh when getting out of bed (supposed from diseased bone) . . . . .	7 weeks	In St. Bartholomew's Hospital, plumber, painter, and glazier, 50, cutting his throat with a razor at Bedford-row, in temporary insanity. . . . .	6 hours	Widow of a gardener, 78, burnt by her clothes taking fire whilst alone in her room . . . . .	4 days
subsequent continued vomiting (supposed from internal disease) . . . . .	6 weeks	In Guy's Hospital, nurse in the hospital, 64, (no inquest) punctured wound of hand . . . . .	8 days	F. 56, burns of the nates from her shift taking fire at a grate, as she stooped in dressing. . . . .	18 days
In St. George's Hospital, plumber's apprentice, 18, wound of the head—fever supervening—fell with a balcony from an attic window, 59, Upper Berkeley-street, when about to clean the window . . . . .	24 days	How caused should have been stated.		In Guy's Hospital, wife of a lighterman, 42, burnt by her clothes taking fire whilst reading alone, at Grove-street, Deptford. . . . .	8 days
In St. Bartholomew's Hospital, plumber, painter, and glazier, 29 (post mort.) fracture of his spine, caused by falling from a plank whilst at work, at Macclesfield-street, City-road . . . . .	5 weeks	M. 58, f injured toe from cutting the nail. . . . .	6 weeks	In London Hospital, daughter of a labourer, 7, accidentally burnt by her clothes taking fire. . . . .	4 days
In London Hospital, son of an engineer, 4, accidental from a fractured thigh by a fall out of bed, and scarlet fever supervening. . . . .	14 days	(no inq.) mortification . . . . .	14 days	In London Hospital, labourer, 50, accidental from burns by the bed clothes taking fire in a bed room . . . . .	*
Sugar-baker, 39, accidental by a fall down steps . . . . .	immediate	Commercial clerk, probably 32, cutting his throat with a pen knife in temporary insanity . . . . .	a few minutes	In London Hospital, son of a labourer, 1, death from burns by his clothes taking fire, but how unknown . . . . .	*
In London Hospital, labourer, 27, accidental from a fall of bags of sugar on his head . . . . .	2 days	Cane planer, 19 (p.m.), gunshot—wilful murder against Thomas Brooks . . . . .	sudden	In London Hospital daughter of a cutler, 9, accidental from burns by her clothes taking fire. . . . .	*
In London Hospital, seaman, 56 (post mort.), accidental from a concussion of the brain, by a fall down a ship's hold at Poplar . . . . .	24 days	Drowning:—		In London Hospital, daughter of a weaver, 9, accidental from burns by her clothes taking fire. . . . .	1 day
In London Hospital, caddy servant, 28, accidental by a fall on deck and fracture of the arm, at sea. . . . .	6 weeks	Shipwright, 22, accidentally drowned in the River Thames, by falling from the side of a ship whilst at work (under water 6 weeks)		In London Hospital, sempstress, 52, accidental from burns by her clothes taking fire, 2 months	14 days
In London Hospital, widow of a tailor, 76, accidental from a fractured thigh by a fall . . . . .	10 days	Labourer, about 30, found dead in the River Thames—no marks of violence.		In London Hospital, daughter of a waterman, 3, accidental from burns by her clothes taking fire. . . . .	1 day
In Guy's Hospital, labourer, 48, fracture of the pelvis, and injuries arising from an accidental fall from a ladder. . . . .	about a week	Hanging and Suffocation:—		In London Hospital, widow of a sailor, 67, accidental from burns. . . . .	*
Apprentice seaman, 19, injuries accidentally received from falling into a ship's dock at Mill Wall . . . . .	*	Widow of a hair-dresser, 67, hanging herself by a handkerchief to a bedstead, kneeling on the ground—temporary insanity—found dead		In London Hospital, widow of a weaver, 82, accidentally burnt by her clothes taking fire. . . . .	1 day
Singlewoman, 20, concussion of the brain from an accidental fall . . . . .	15 days	F. 5 weeks, cause of death not discoverable on post. mort. exam.—the parents were drunk in bed with the child when found dead.		Son of a green-grocer, 2, scalded by the upsetting of a saucepan of hot water. . . . .	12 days
F. 49, injuries of the head from a fall down stairs while drunk . . . . .	instant	Stock-broker, 35, diluted carbonic acid gas, from burning charcoal in a stove incautiously placed by himself in his bedroom without suicidal intent—found in bed insensible and breathing stertorously, and died in . . . . .	48 hours	In London Hospital, daughter of an eating-house-keeper, 3, accidental from scalds caused by the fall of a kettle of boiling water, and scarlet fever supervening. . . . .	9 days
In St. George's Hospital, toy-shop-keeper, singlewoman, 41 (post mort.), inflammation of the lungs following fracture of the ribs—accidentally knocked down and run over by a hackney cabriolet drawn by one horse, when crossing the road at Knightsbridge. . . . .	5 days	Burns and Scalds:—		In London Hospital, son of a tinplate-worker, 1, accidental by scalds with coffee, from the fall of a pot . . . . .	5 days
In London Hospital, son of a pastry cook, 3, accidentally run over by a cart . . . . .	*	In St. George's Hospital, daughter of a stone-sawyer, 3, burn of the body and face—clothes took fire from a fire in the grate without fender or guard, when left in the room with other young children, at Augustus-court, Pimlico . . . . .	6 hours	In London Hospital, son of an engineer, 2, accidental from scalds by the fall of a coffee pot of boiling coffee. . . . .	3 days
In London Hospital, widow of a labourer, 79, accidentally run over by a waggon, which fractured her leg . . . . .	*	In St. George's Hospital, daughter of a tailor, 10 (post mort.), congestion of the left lung, and sloughing of the face and neck from a burn—pinafore took fire when filling a kettle on the hob, at Brewer-street, Pimlico . . . . .	28 days	In London Hospital, son of a labourer, 10 mon., accident by scalds from a pot of boiling coffee falling on him. . . . .	*
M. 75 (no inquest) wound in the leg from being knocked down by a cab . . . . .	5 weeks	In St. Bartholomew's Hospital, wife of a sawyer, 29, burnt by her clothes taking fire whilst in a fit, at Collingwood-street, Shoreditch . . . . .	4 days	In St. George's Hospital, engine-driver, 56, scalds—fell into boiling water in the stoke-hole of a steam-engine, at the Iron Gate Wharf saw-mills, Paddington . . . . .	6 hours
gangrene . . . . .	1 week	In St. Bartholomew's Hospital, daughter of a sawyer, 29, burnt by her clothes taking fire whilst in a fit, at Collingwood-street, Shoreditch . . . . .	4 days	Daughter of a whitesmith, 8 mon. (no inq.), severe scald . . . . .	6 days
suppuration . . . . .	1 week	In St. Bartholomew's Hospital, son of a sawyer, 7 mon., burnt by his clothes taking fire, in consequence of his mother falling down in a fit with him near the fire, in Collingwood-street, Shoreditch . . . . .	5 hours	It should have been stated how the scald was caused.	
consequent exhaustion.		In St. Bartholomew's Hospital, daughter of a whalebone-cutter, 11, burnt by her frock taking fire from a candle on the floor, at Shoreditch . . . . .	10 days	Poison:—	
In London Hospital, labourer, 35, accidentally run over by a railway train on the Eastern Counties Railway near Ponder's End, whereby his left leg was fractured. . . . .	4 days	In St. Bartholomew's Hospital, daughter of a sawyer, 3, burnt by her clothes taking fire whilst alone, at Playhouse-yard, Whitecross-street . . . . .	8 hours	F. 52 (post mort.), arsenic—suicide in temporary insanity—found dead in bed. . . . .	*
Labourer, 55, concussion of the brain—thrown from a cart at Wandsworth accidentally . . . . .	1 hour	In St. Bartholomew's Hospital, daughter of a turner, 9, burnt by her clothes taking fire whilst blowing the fire with bellows, at Sidney-grove, City-road. . . . .	10 days	F. 49 (post mort.), arsenic—suicide in temporary insanity—found dead in bed. . . . .	*
Son of a painter, 20, injuries from being accidentally drawn into an engine . . . . .	*	In London Hospital, son of a labourer, 6, accidental from burns . . . . .	died on the same day	M. 4, natural death from disease of kidney, bronchial tube and lungs, accelerated by subacetate of copper taken into his body, being poisoned. . . . .	*
Where, and what kind of engine should have been stated?				M. 83, inflammation of the stomach from a liniment composed of ammonia, camphor, and laudanum having been inadvertently administered to him . . . . .	6 hours
In University College Hospital, labourer, 94, fracture of the finger, producing inflammation of the absorbents of the arm . . . . .	*			M. about 50, natural, but accelerated by the impure air of the room where he lodged—found dead in bed—no marks of violence. . . . .	*
M. 45, f injury to the ankle . . . . .	6 months				
(no inq.) phthisis. . . . .	3 months				
In the above two cases it should have been stated how the injury was caused.					

**FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.**  
NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

<b>See Hospital Returns.</b>				M. under 1, hydrocele—sympathetic fever.....	*
<b>Remittent Fever:</b> —				F. 40 (post mort.), disease of the stomach, accompanied with gallstones.....	many years
M. 10 mon., remittent fever—effusion on the brain.....	*				
<b>Infantile Fever:</b> —					
F. 1, infantile fever.....	14 days				

In the return for week ending March 27th, causes of deaths were—

(1) Certified by written statement of Medical Attendant in.....	873 cases.
(2) Attested by Coroner, or stated by him to be not ascertainable, in.....	102 "
(3) Stated to have been without Medical Treatment in.....	14 "
(4) Not certified in.....	40 "

TOTAL....1029

Deaths under 1st and 2nd heads show a proportion to the total number of nearly 95 per cent. Besides the 14 cases enumerated above, two which had no Medical Attendance, are included under the 2nd head; and it is probable that more are included under that and the 4th heads.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 50; apoplexy, 8; disease of the heart, 1; cedema of glottis, 1; childbirth, 1; other specified causes, 16; "natural death," "visitation of God," "found dead," &c., 16.—TOTAL, 102 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was held, is 37.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Negative and tension strong at each examination.	See General Remarks.	The sky was overcast throughout the day with cirro-stratus and -cus. Rain was falling generally.
MON.	Positive and weak till 1h. 30m. p.m., except at 9h. a.m., when it was very active. From 3h. 30m. till 6h. p.m., strong negative electricity was shown, with frequent sparks, and galvanic currents. From 9h. p.m. till midnight positive with moderate tension.	See General Remarks. Rain was falling. See General Remarks.	The amount of cloud was variable till 5h. 30m. a.m.; from that time till 11h. a.m. the sky was overcast, and very variable afterwards till midnight. Rain began to fall at 2h. 30m. p.m., and continued falling at intervals till 9h. p.m.
TUES.	Positive and tension moderate throughout the day. The max. occurred at 11h. p.m.	See General Remarks.	The sky was nearly cloudless till 6h. a.m.; one-half was covered till 11h. a.m.; nearly overcast afterwards till 3h. p.m., and variable from that time till midnight.
WED.	Positive and tension strong throughout the day. The tension was nearly the same at every observation.	See General Remarks.	The sky was cloudless till 9h. a.m., and with slight exceptions was overcast during the remainder of the day.
THURS.	Positive but very weak till 5h. a.m. Positive and tension strong throughout the remainder of the day, except at about 3h. p.m., and from 5h. 40m. till 5h. 55m. p.m., when it was negative and very active.	See General Remarks.	With the exception of a few small breaks that occurred between 1h. and 2h. a.m., the sky was overcast till 9h. a.m.; from that time till 5h. 30m. p.m. the amount of cloud was variable. Overcast afterwards till midnight.
FRI.	The electricity was positive at each examination.	See General Remarks.	Overcast till 10h. a.m.; from that time till 9h. p.m. about one-half of the sky was covered; overcast afterwards till midnight. At 5h. p.m. a shower of hail and sleet fell, and at 10h. p.m. a shower of rain.
SAT.	Positive and tension strong till 9h. a.m. Positive and weak throughout the remainder of the day, except at 7h. p.m., when it was negative, and sparks were shown.	See General Remarks.	The sky was overcast till 6h. a.m.; cloudless from that time till 6h. a.m., and with the exception of a small break that occurred at 9h. p.m., overcast till midnight. From 5h. 30m. till 6h. 30m. p.m. frequent squalls of snow, rain, and hail occurred. The magnets were disturbed during the evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 31·8; and the mean reading at 7h. 30m. P.M., was 37·1; the mean readings at the Royal Observatory for the same times were 31·3 and 35·9 respectively.

† The mean direction of the wind for the week was variable.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, April 10th, 1847.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

Deaths in the districts added in 1847.....							14							

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 19 births and 14 deaths. The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

Births and Deaths not caused by Violence, registered in the Metropolis in the last 13 weeks, with the Mean Temperature for the same periods.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 14.

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, *in years, except when otherwise stated*. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Burns and Scalds:—	duration
Wife of a shoemaker, 37, fracture of the skull, and laceration of the brain, from falling down stairs in the dark, while intoxicated. . . . .	<i>instant</i>	F. cook, 23, drowned herself, in a state of mind unknown.		In Westminster Hospital, daughter of a labourer, 3, ( <i>post mort.</i> ), burns of the face and arms—clothes took fire from a fire in the grate unguarded, when left alone . . . . .	2 days
F. 76, natural death accelerated by a fall . . . . .	3 days	Medical man, 49, ( <i>post mort.</i> ) drowning—not known how he came into the water.		Physician, 62, burns of the back and limbs—seized with giddiness, and fell against the fire in his drawing room . . . . .	17 hours
M. 32, accidental death by a fall down stairs causing bruises—delirium tremens supervened . . . . .	*	Seaman, 17, drowned by falling out of a boat into the River Thames—under water 16 days.		Son of a turner, 5, burn of chest and belly from clothes taking fire—supposed to have occurred when playing with lighted paper . . . . .	12 days
M. 43, accidental death by a fall down a ship's hold, fracturing head and neck . . . . .	*	Steward in a steamboat, 43, drowned in the River Thames—how unknown—under water 4 hours.		F. 9, burnt by her pinafore taking fire, from a spark flying out of the fire . . . . .	12 days
F. 75, accidental death from a fall, and injury of the arm . . . . .	5 weeks	Single woman, about 25, found dead, without mark of violence, in the River Thames at Bernoudsey—drowned, in water 4 weeks and 2 days		M. 7, accidental death from burns by the clothes taking fire . . . . .	*
Son of a coachman, 10, compression of the brain by a fall from a tree accidentally . . . . .	11 hours	F. 24, found drowned in the Grand Surrey Canal.		F. 8 months, accidentally burnt from her clothes taking fire . . . . .	3 hours
F. 74, fracture of the neck of the thighbone (no <i>ing.</i> ) { debility.	6 months			Daughter of a carpenter, 5, burn on her face and arms from her clothes accidentally taking fire . . . . .	3 days
<i>Query—by a fall?</i>					
F. 2, ( <i>no inquest</i> ) phlebitis from a fall . . . . .	1 week	<i>Hanging and Suffocation:—</i>			
Seaman, 30, from the effects of an accidental fall . . . . .	*	M. 44, hanged himself, in a temporary state of derangement of mind.		Wife of a coachmaker's labourer, 77, inflammation of chest from a burn on the back, caused by accidentally falling against the fire in the grate . . . . .	21 days
<i>Into a ship's hold? or in what other place and circumstances?</i>					
Wife of a bricklayer, 74, mortal injuries and fracture of the neck by falling down stairs accidentally . . . . .	10 hours	Jobbing upholsterer, 45, hung himself with a rope to a staple in the wall of the wash-house—suspended about 3 minutes—temporary insanity . . . . .	<i>lived about 6 hours</i>	Son of a labourer, 3, accidental, from scalds by drinking boiling water from a teakettle . . . . .	23 hours
In University College Hospital, carpenter, 34, falling in of brick arches of a warehouse from the frost and snow deranging the cement . . . . .	2 hours	M. 24, hanged himself in temporary insanity with a neckerchief looped over a partition in a privy—when found supposed to have been dead 11 hours.		M. 29, natural death, which may have been accelerated by scalds, but how caused unknown . . . . .	*
In King's College Hospital, carpenter, 67, ( <i>post mort.</i> ) fractured ribs perforating pleura and lung—fell against and was struck by the wheel of a hackney cabriolet drawn by one horse, when crossing the carriage-road in Long Acre . . . . .	4 days	F. servant, 20, suicide by hanging—state of mind not certainly known.		Daughter of a whitesmith, 8 months, scald of the legs from pulling down a coffee-pot from a hob, while in the lap of a boy by the fire . . . . .	6 days
Carmen, 50, internal injuries—knocked down and run over by a coal-cart drawn by one horse which he was driving (when endeavouring to stop the horse which took fright) . . . . .	<i>instant</i>	Dust-sifter, 19, suffocation from the fall of a dust heap during a thaw, while shovelling—died out in ten minutes dead.		Daughter of a labourer, 6, scald of the back from sitting on a fender, and catching the spout of a kettle on the hob with her pinafore string . . . . .	8 days
Greengrocer, 59, ( <i>post mort.</i> ) fractured ribs and lacerated lung from having been knocked down in the New Kent-road, by a vehicle driven by some person unknown . . . . .	43 hours	M. 39, suffocation during eating . . . . .	<i>sudden</i>	Son of a porter to a laundress, 2, scalds of the back and nates from stepping backward into a pot of soapsuds . . . . .	*
In Westminster Hospital, coal and coke vender, 31, ( <i>post mort.</i> ) secondary abscess, and irritative fever, following injury of the right arm—no evidence how caused . . . . .	93 days	M. 40, accidental suffocation—stoppage of the throat by a piece of roast beef . . . . .	*	<i>Poison:—</i>	
<i>The two following returns are defective as not showing how the injury was caused.</i>					
In St George's Hospital, { contusion of back . . . . .	*	F. domestic servant, 23, ( <i>p.m.</i> ) inhaling carbonic acid from the burning of charcoal, incautiously placed by her in her bed-room—when found, supposed to have been dead about 6 hours		Lady, (single) 22, prussic acid taken in a mixture prepared by a chemist from a prescription ordering the water of bitter almonds.	
M. 40, ( <i>no inq.</i> ) { epilepsy . . . . .	*	M. 26, asphyxia—fell into the water when descending a ladder in well on becoming insensible from the effect of the impure air of the well—under water 30 minutes.		Labourer, 40, died from an excessive draught of rum inbibed into his stomach accidentally (?) without any intent to destroy life . . . . .	*
M. 70 { contused side . . . . .	1 year	Daughter of a servant, 4 days, ( <i>post mort.</i> ) congestion of the lungs and brain, whether from natural causes, or breathing foul air under the bed clothes, not ascertainable.		<i>Wilful Neglect:—</i>	
( <i>no inq.</i> ) { catarrh . . . . .	10 months	Son of a carpenter, 8 weeks, convulsions by being accidentally turned on his face in bed—found dead in bed.		M. newly born, loss of blood at the birth, and so wilfully murdered by a person unknown; found in water (as indicated by Registrar's note.)	
<i>Wounds:—</i>					
Cutter at an eating-house, 45, phthisis, after attempting suicide with a razor . . . . .	*	M. 1 month, natural—accidentally suffocated in bed.		F. about 3 weeks, pneumonia—whether natural or from wilful exposure unknown.	
NOTE.—A man aged 47 years died of tetanus in 14 days. Whether traumatic or otherwise, and other important circumstances should have been stated.		M. 2 months, found dead in bed—supposed to have been overlaid.			
		Son of a cooper, 36 hours, accidentally suffocated by the bed clothes when the mother was asleep.			

FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

University College H.:		M. 32, delirium tremens .....	*	F. 27 (post mort.), phthisis—ulceration of intestines, linings of bladder, and pelvis of kidney .....	*
M. 55 (inquest), extravasation of blood in the brain, produced by natural disease .....	*	F. 26, erysipelas .....	*	Dreadnought H.:—No deaths registered.	
M. 55, { sanguineous apoplexy ..... 8 hours Bright's disease of the kidney .....	*	F. 36, ulceration and sloughing of the mucous membrane of the bowels, and inflammation of the peritoneum .....	*	Royal Ordnance H.:	

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHIAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox:	duration	Hæmorrhage (continued):	duration	Intemperance:	duration
F. 9 mon, { variola simplex ..... bronchitis .....	21 days	M. 46 (inquest), natural death by the visitation of God—rupture of a vessel on the lungs, sudden		M. 40 (inquest), serous apoplexy during drunkenness; excitement and exposure to cold .....	not previously ill
Whether vaccinated should be mentioned in all cases.		F. 70 (inquest), natural cause—probably the rupture of some vessel near the heart .....	instantly	F. 39 (inquest), disease of the brain—died during intoxication with gin—a drunkard.	
M. 17, variola confluent ..... 10 days		M. 37 (inquest), natural death—rupture of a blood vessel of the thorax .....	*	F. 57, { chronic hepatitis, &c. .... many years inebrietas.	
M. 18, confluent small pox ..... 1 week		M. 35 (inquest—post mort.), rupture of a blood-vessel in the chest .....	sudden	F. 46 (inquest), congestion of the brain from excessive drinking of spirituous liquors. ....	*
F. 6, { small pox ..... 14 days first attack—never vaccinated.		Malformation:		Privation:	
F. 1, small pox (not vaccinated) ..... 9 days		F. 1, { pneumonia ..... congenital malformation of the chest.	*	F. 50 (inquest—post mort.), natural congestion of the brain accelerated by exposure to cold; sold sheep's feet in the street; found dead in her room.	
M. 18 days, { small pox ..... 5 days convulsions ..... 6 hours		F. 6 weeks, cyanosis .....	3 weeks	Want of Breastmilk:	
See Returns of Guy's and Small Pox Hospitals.		Hernia:		M. 10 days (post mort.), ileo-colitis; unable to take the breast ..... probably from birth	
Typhus, &c.:		M. 48 (inquest), died suddenly from strangulated hernia, the deceased being at the time of his death an idiot, and incapable of directing proper attention to his case .....	*	F. 12 weeks, want of breast milk .....	*
M. convict at Woolwich, 23 (inquest), fever and bronchitis .....	4 weeks	M. 74 (inquest—post mort.), strangulated hernia .....	48 hours	Protracted Lactation:	
M. 48, typhus fever—erysipelas ..... 10 days		M. 76, { hernia ..... 20 years pleurisy ..... 4 days		M. 22 mon., protracted lactation; marasmus. ....	*
F. 45, gastric fever .....	*	F. 68, strangulated hernia .....	*	Miscellaneous Causes:	
F. 3, typhus fever ..... 3 weeks		M. 59, { inguinal hernia ..... (p.m.) { strangulation ..... 4 days		In Westminster House of Correction, F., prisoner, 56 (inquest, post mort.), natural rupture of the heart; found dead on the bed in her cell.	
M. 56, { fever ..... 4 days diarrhoea ..... 1 day		Diabetes:—No deaths registered from this cause.		M. 42, painter's colic .....	4 days
M. 29, fever ..... 3 days		Stone:		M. 43, chimney-sweeper's cancer of the stomach .....	1 year
M. 29, low nervous fever .....	*	M. 78, stone in the bladder—erysipelas .....	*	M. 35 (post mort.), carcinomatous disease of the lumbar glands, following an operation for carcinoma of the testicle performed. ....	14 months previously
F. 66, fever—bronchitis ..... 6 weeks		Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.		M. 75, { vertigo ..... 10 days softening of the brain.	
F. 79, { general debility ..... several years fever ..... 3 weeks		F. 19, abortion—flooding .....	*	M. 61, { vertigo ..... 8 days coma ..... 3 days pneumonia ..... 5 days chronic bronchitis ..... 4 years	
M. 50, { fever ..... 10 days jaundice ..... 4 days		F. 31, puerperal fever ..... 8 days		M. 67, { hypertrophy of left ventricle; dilatation of right ventricle and auricle, and aorta. .... nutmeg liver .....	*
M. 39, fever—pleuritis ..... 7 days		F. 31, { confinement ..... 6 days 6 hours puerperal peritonitis ..... 5 days		F. 43, cyanache parotidæa .....	4 weeks
F. 61, fever ..... 2 weeks		F. 27, puerperal peritonitis ..... 8 days		M. 63, stricture of the urethra; infiltration of urine into the scrotum and prepuce, causing gangrene. ....	*
F. 25, brain fever ..... 3 weeks		F. 40, uterine hæmorrhage ..... 11 days		F. 62 (post mort.), granulated broken down liver, with 12 oz. of purulent fluid in the right cavity of the chest, communicating by means of a small opening through the diaphragm close to the spine .....	*
M. 34, fever—bronchitis .....	*	F. 44, puerperal fever ..... 2 days			
M. 11 mon., typhus fever .....	7 days	F. 46, { accouchment ..... syncope 1½ hour after delivery.			
M. 76, fever, with cerebral congestion ..... 1 week		(p.m.) { three tumours were found growing from the uterus.			
F. 8, { gastric fever ..... 2 months effusion on the brain ..... 2 days		Delirium Tremens:			
See Westminster Hospital.		F. 42, delirium tremens .....	3 days		
Remittent Fever:		See St. Bartholomew's Hospital; also Deaths by Falls.			
M. 1, remittent fever .....	1 month				
Syphilis:					
F. 6 weeks, syphilitic eruption—abscess. ....	*				
Hæmorrhage:					
F. 36, { venous hæmorrhage from a rupture of the tibial vein. .... varicose ..... some years					
M. 40, rupture of a vessel. ....	*				
F. 37 (inquest), rupture of a blood vessel—natural death .....	sudden				
M. 32 (inquest), found dead—natural death from the rupture of a vessel internally .....	*				

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 51; apoplexy, congestion of the brain, 19; intemperance 3 (see also violent deaths); rupture of vessels (not cerebral) 6; rupture of the heart, 1; disease of the heart, 16; indigestion, 1; exposure, 1 (see also violent deaths); other specified causes, 34; "natural causes," "visitation of God," "found dead," &c., 37.—TOTAL, 169 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was held, is 58.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 10th April, 1847.

Day.  —  1847	Phases  of the  Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND					Mean Amount of Cloud, 9—10	Rain in inches, read at 9 o'clock the next morning

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive with weak tension at each ex- amination.	See General Remarks.	During the morning the greater part of the sky was covered with cirrostratus and scud. It was generally about one-half covered during the remainder of the day.
MON.	Nothing was shewn till 7h. a.m.; through- out the remainder of the day positive elec- tricity was shewn, with moderately strong tension. The maximum occurred at 7h. 20m. and 9h. 20m. p.m.	See General Remarks.	The sky was mostly overcast till 4h. p.m., and about one-third covered with cloud during the remainder of the day. Rain was falling at intervals from 8h. a.m. till noon.
TUES.	Positive and weak till 5h. p.m., and also at midnight. From 8h. to 10h. p.m. strong negative electricity was shewn.	See General Remarks. Rain falling.	Overcast till 6h. a.m.; from that time till 2h. p.m. it was about one-half covered with cumuli and scud. Overcast during the remainder of the day. Rain was falling occasionally between 3h. and 5h. a.m., and from 8h. to 10h. p.m.
WED.	The electricity was positive throughout the day, but the tension was very variable, being sometimes strong, and at other times very weak.	See General Remarks.	Nearly cloudless till 4h. a.m. Overcast throughout the remainder of the day, except at about 7h. p.m., when it was mostly clear. A faint lunar halo was seen at 3h. 50m. a.m. The magnets were disturbed during the evening.
THURS.	Nothing was shewn till 9h. a.m.; from that time till midnight positive and very weak.	See General Remarks.	Overcast till 4h. p.m., and about one-third covered with cirrostratus and scud during the remainder of the day. A thin rain was falling between 3h. and 9h. a.m. From 8h. a.m. till midnight the wind was blowing with a constant pressure of from 3lbs. to 5lbs. on the square foot; at 11h. 15m. a.m. a gust of 11lbs. occurred; at 5h. 20m. p.m., a gust of 12lbs. occurred; and at 6h. 10m., a gust of 15lbs. occurred, which was the greatest during the day.
FRID.	Positive and weak throughout the day, except at 7h. 20m. a.m., and at 7h. 20m. and 9h. 20m. p.m.	See General Remarks.	The sky was about one-half covered till 1h. a.m.; cloudless from that time till 8h. a.m., and the greater part was clouded throughout the remainder of the day. From 6h. a.m. till 6h. p.m. the wind was blowing with a constant pressure of from 3lbs. to 5lbs. on the square foot; at 8h. 30m. a gust of 8lbs. occurred, which was the greatest during the day.
SAT.	Nothing was shewn till 9h. a.m. Posi- tive with moderately strong tension throughout the remainder of the day. A max. occurred at 9h. 20m. a.m.	See General Remarks.	With slight exceptions, the sky was cloudless till 9h. a.m.; from that time till noon about one- half was covered; overcast afterwards till 7h. 30m. p.m.; cloudless from that time till midnight. A few drops of rain fell during the afternoon.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 44.3; and the mean reading at 7h. 30m. P.M., was 48.6; the mean readings at the Royal Observatory for the same times were 44.8 and 47.9 respectively.

† The mean direction of the wind for the week has been W. and W.S.W.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, April 17th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population		5 Springs.		Deaths registered in the Week		Births registered in the Week	
Males .....	468	Females .....	446	Males .....	493	Males .....	694
				Females .....	488	Females .....	644
Total		914		Total..		Total.. 1338	
Deaths registered in this the third week of the second quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—							
(1840)	(1841)	(1842)	(1843)	(1844)	(1845)	(1846)	(1847)
904	921	824	976	846	928	967	968
Deaths in the districts added in 1847..... 13							
(average of the series of weeks, exclusive of the last) 909							

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 11 births and 13 deaths.

The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

\* The age of 1 person, whose death is ascribed to dysentery, is not stated.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 15.

(The tabular abstract on the first page is for the week ending Saturday, April 17th. The following selection of cases is made from the returns for the week ending April 10th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):	duration	Drowning (continued):—	duration
M. 63, mortal injuries to the brain, by falling down a certain flight of stairs at Hoxton.		In St. Bartholomew's Hospital, butcher, 34 (post mort.), locked jaw, caused by a graze on his leg, from an iron hoop running against it, at King's Cross .....	1 week	Greengrocer, 56, drowned himself—being of unsound mind (under water 6 weeks).	
In Guy's Hospital, highterman, 59, fracture of the left leg from an accidental fall, occasioned by a chain on which he was sitting giving way. ....	about 16 days	In St. Thomas' Hospital, tailor, 49, erysipelas caused by a wound on the back of the head; but how the wound was caused no evidence to shew .....	about 1 week	M. 16, found dead in the waters of the River Thames—no evidence to prove how he came there.	
F. 82 (no inquest), injury to hip, and extensive sloughing of the back .....	10 weeks	Law clerk, 38, suicide—cut his throat with a knife (of unsound mind) .....	*	M. about 18, found dead in the River Thames.	
Query—How was the injury caused?				M. 20, found dead in the River Thames—no evidence to prove how he came there.	
In St. Thomas' Hospital, M. 21 (no inquest), abscess following dislocation of ankle joint, 2 years, diarrhoea .....	9 months	NOTE.—A female, aged 36, died of "lock jaw." It should have been stated how it arose.		Saffocation:—	
M. 30 hours, injuries received in birth.				F. 23, found dead in a privy, with marks to account for death—apparently suffocated in the soil.	
F. newborn (post mort.), natural—congestion of the brain—marks of pressure on the neck, supposed to have been caused by the hand during labour, without medical assistance—found dead in the mother's—supposed to have died during or immediately after birth		Drowning:—		Burns:—	
Wounds:—		M. 24, drowned—by what means he came into the water no proof (under water 6 weeks).		In Guy's Hospital, daughter of a stoker at gas works, 2, accidentally burnt by her clothes taking fire in a room at Lambeth .....	12 hours
In Charing Cross Hospital, labourer, 56 (post mort.), suffocation caused by effusion into the larynx, from inflammation following wound in the throat and larynx, inflicted by himself with an awl, when in a state of temporary insanity. ....	*	M. dressed as a groom, about 20, drowning—fell from a coal barge, while throwing a firework in the air—not sober.		F. 4, burned by her clothes taking fire .....	instantly
		Bricklayer, 31, found in a state of intoxication near to and afterwards struggling in the waters of the Regent's Canal—how his death was caused, except by accidental drowning, no evidence appeared.		F. 56, injuries from being accidentally burnt—from her apron taking fire .....	11 days
		F. newborn, found dead without marks, in the Regent's Canal.		Poison:—	
				Wife of a manufacturing chemist, 33, nitrous acid (quantity not known)—whether drunk when insane and ignorant of its nature, not known .....	31 hours

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's II.:—	duration	Charing Cross II.:—	duration	King's College II.:—	duration
M. 50, stricture of urethra—rupture of urethra behind stricture—urinary abscess .....	*	M. 26 (post mort.), morbus Brightii—cirrhosis of the liver .....	several months	F. 30, { inflammation of os and cervix uteri ..	*
M. 21, scrofulous ulceration of the neck—phthisis .....	*	F. 39 (post mort.), typhoid fever .....	*	{ pelvic abscess .....	*
M. 30, { plenro-pneumonia and fever .....	13 days	See Violent Deaths.		St. Bartholomew's II.:—	
(post mort.) { granular degeneration of the kidneys .....	*	Middlesex II.:—		M. 28, phthisis .....	*
F. 69, dropsy and disease of the heart .....	*	M. 21 (cause of death not yet reported).		M. 54, strangulated hernia .....	*
F. 51, ulceration into the sac of an umbilical hernia—peritonitis .....	*	University College II.:—No deaths registered.		M. 50, inflammation of larynx, pleura, &c. ..	*
F. 68, incarcerated femoral hernia—peritonitis—debility .....	*	Small Pox II.:—		M. 31, chronic disease of the heart .....	*
		M. 5, { small pox, confluent, petechial .....	*	M. 24, anasarca—albuminous urine .....	*
		{ said to have been vaccinated—no cicatrix.		M. 37, phthisis .....	2 years
Westminster II.:—		Fever II.:—No deaths registered.		F. 35, dropsy, with disease of the kidneys ..	*
F. 45, phthisis pulmonalis .....	1 year			F. 49, disease of the kidney and heart .....	8 months
				F. 5, inflammation of the arm and shoulder ..	*
				F. 46, emphysema, with bronchitis .....	*
				F. 35, disease of the heart .....	*
				See Violent Deaths.	

THIRTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued).—

London H. :—	duration	St. Thomas' H. :—(continued.)	duration	Guy's H. (continued) :—	duration
M. 55, { laryngitis ..... 4 days (post mort.) { abscess of thyroid gland and adjacent parts.		M. 40, phthisis ..... 7 months		M. 22 (post mort.), phthisis... .. *	
M. 35, hæmorrhage ..... 35 days		M. 40, apoplexy ..... *		M. 24, consumption ..... 13 months	
F. 30, { morbus Brightii ..... 14 months (post mort.) { anasarca ..... 5 months		M. 46, diseased aortic valves—aneurism of aorta, bursting into pericardium ..... *		M. 23, phthisis ..... *	
		M. 34, hepatitis chronica ..... 3 months		M. 6 mon., { operation for harelip ..... 17 hours { convulsions ..... *	
		See Violent Deaths.		See Violent Deaths.	
St. Thomas' H. :—		Guy's H. :—		Dreadnought H. :—	
F. 44, bronchitis ..... 3 weeks		M. 54, erysipelas of head and face—diffused abscesses on neck and upper part of chest ..... *		M. 27 (post mort.), abscess in the thigh .... 6 weeks	
F. 24, erysipelas of face ..... *		M. 51 (post mort.), pericarditis, pleurisy, albuminuria ..... 2 years		M. 25, { acute rheumatism ..... 21 days (post mort.) { pericarditis ..... 15 days { adhere pericardium.	

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox :—	duration	Typhus, &c. (continued) :—	duration	Diabetes :—	duration
F. 6, { small pox ..... 7 days { never vaccinated.		M. 30, typhus ..... *		M. 36, { diabetes ..... 2 years	
M. 34, confluent small pox (after vaccination) 7 days		M. 34, typhus ..... *		M. 49, { phthisis ..... 6 months	
M. 4, { confluent small pox ..... 11 days { never vaccinated.		F. 21, typhus ..... *		M. 49, diabetes ..... 2 years, 8 months	
F. 1, small pox (never vaccinated) ..... 7 days		F. 50, febris communis ..... 25 hours		Stone :—No deaths registered from this cause.	
F. 4, small pox natural (never vaccinated—first attack) ..... *		F. 3, fever and erysipelas ..... 14 days		Childbirth :—The time elapsing from commencement of labour to death should invariably be returned.	
F. 6 weeks, { small pox ..... 2 weeks { took it from the mother's breast, { who was ill from it a fortnight after confinement.		M. 4, { typhus ..... 10 days { hydrocephalus ..... 4 days		F. 30, puerperal fever ..... *	
F. 4, small pox, confluent ..... *		M. 3, typhus ..... 4 weeks		F. 37, flooding consequent upon placental presentation ..... 3 weeks	
It should be stated in all cases whether vaccination had been performed, and with effect.		M. 7, fever ..... 15 days		F. 25, puerperal fever ..... 5 days	
F. 9 mon., small pox (after vaccination—no medical attendant) ..... *		F. 1, { fever ..... *		F. 29, puerperal fever ..... *	
M. 13 weeks, small pox (without previous vaccination) ..... *		F. 25, { bronchitis—pneumonia ..... *		F. 28, puerperal peritonitis ..... *	
M. 9, small pox (not vaccinated) ..... 9 days		F. 25, { bilious fever ..... *		F. 26 (post mort.), puerperal fever ..... 3 days	
F. 8 weeks, variola (never vaccinated) ..... 12 days		F. 6 mon., { abscess of the liver ..... *		F. 32, { childbirth ..... 30 hours { exhaustion ..... 2 hours after delivery	
M. 4, { small pox, confluent ..... 7 days { vaccinated once 3½ years ago, but without effect.		F. 6 mon., { dentition ..... 11 days { fever ..... *		F. 25, { childbirth ..... 3 days { puerperal peritonitis ..... 36 hours { internal flooding after childbirth, on 9th March, 1847	
M. 4 mon., { small pox ..... 7 days { vaccinated 1 month ago.		M. 55, simple fever—brouchitis ..... *		F. 35, { never rallied ..... *	
F. 2, small pox, natural ..... 3 days		See Returns of Charing Cross Hospital.		F. 31, puerperal fever ... .. 7 days	
See Small Pox Hospital.		Intermittent Fever :—		Fever and Abortion :—	
Chicken Pox :—		F. 34, { intermittent fever ..... 12 days { typhus ..... 2 days		F. 21, { fever ..... 14 days { abortion ..... 3½ months	
F. 1, { chicken pox ..... 9 months { marasmus.		Remittent Fever :—		Delirium Tremens :—	
Typhus, &c. :—		F. 2, remittent fever ..... 6 weeks		M. 40, delirium tremens ..... 7 days	
F. 30, typhoid fever ..... *		M. 68, { remittent fever ..... 5 weeks { cerebritis ..... 12 days		M. 52, { coma ..... 4 days	
F. 35, brain fever ..... 17 days		Syphilis :—		M. 39, delirium tremens ..... *	
M. 19, typhus ..... 5 days		F. 3 mon., { syphilis ..... 3 months		Delirium Tremens and Phthisis :—	
F. 20, typhus ..... *		M. 5 mon., secondary syphilis ..... from birth		M. 36, { delirium tremens ..... 8 months (p.m.) { phthisis ..... 4 months	
M. 1, mesenteric fever ..... *		F. 27, { mucæ-enteritis ..... 2 months { secondary syphilis ..... *		Intemperance :—	
M. 2 weeks, aphthous fever ..... 4 days		F. 1 mon., atrophy—syphilis ..... 3 weeks		No deaths registered from this cause.	
F. 77, gastric fever ..... *		Hæmorrhage :—		Privation :—	
F. 5, typhus ..... 21 days		F. 45 (inquest), extravasation of blood between peritoneum and left kidney—no marks of violence, and how caused unknown ..... *		In the sub-district of Regent's Park, M., about 60 (inquest), want of common necessities of life (no blame to parochial authorities)... .. *	
M. 4, { fever ..... 1 week { effusion on the brain ..... 1 day		M. 33 (inquest), natural death—rupture of a blood-vessel of the lungs in coughing... 20 minutes		In sub-district of St. Andrew's (East), Holborn, F. 16 (no inq.), bronchitis, from cold and starvation ..... *	
M. 38, fever ..... 3 weeks		See Returns of London Hospital.		Miscellaneous Causes :—	
F. 39, continued fever ..... *		Other cases of hæmorrhage are included under apoplexy, hæmatemesis, &c.		M. 69, gall stone ..... 6 months	
F. 3, { continued fever ..... some weeks { pneumonia and bronchitis ..... 14 days		Malformation :—		F. 70 (post mort.), cirrhosis and tubercular accretion of the omentum and peritoneum, about 1 year	
F. 6, fever ..... *		F. 10 weeks, cyanosis.		M. 37, { epileptic fits ..... 9 months (p.m.) { hæmiplegia of right side ..... 3 months	
F. 4, { hydrocephalus ..... 14 days { hydrocephalus ..... 5 days		M. 2 mon., { malformation of the palate.		Serjeant in the A division of Metropolitan Police, 35 (inquest—post mort.), dropsy of the heart—aneurism of aorta—rheumatic inflammation of the heart—fell when running after a hackney cabriolet, and died instantly.	
F. 31, fever—chronic inflammation of the stomach—enlargement of the spleen ..... *		M. 6 days, rectum imperforatum.		M. 14 (post mort.), caries of the temporal bone—ulceration of the brain ..... several years	
M. 27, fever—pericarditis—irritation of the brain ..... 3 months		See Returns of Guy's Hospital.		died 10 days after severe symptoms shewed themselves.	
F. 90, fever and its effects ..... 10 weeks		Cyanosis and Phthisis :—		F. 82, { pyelitis ..... 6 months (post mort.) { euteritis ..... 13 hours	
M. 3 mon., febris ..... 4 weeks		M. 20, cyanosis—phthisis ..... *		M. 62, abscess in thigh from sprain—underwent operation in Middlesex Hospital ..... 6 weeks	
M. under 1, typhus ..... 10 days		Hernia :—		M. 20 mon., premature birth from fright.	
F. 5 mon., febris continua ..... *		M. 63, strangulated hernia ..... *			
F. 3, fever—convulsions ..... *		F. 53, { strangulated femoral hernia ..... 70 hours (p.m.) { operation ..... 50 hours			
F. 17, { fever ..... 21 days { disease of the brain ..... 4 days		See St. George's and St. Bartholomew's Hospitals.			
F. 22, { fever ..... 7 days { inflammation of membranes of the brain ..... 4 days					
F. 74, fever ..... 3 weeks					
M. 30, typhus ..... *					
F. 3, typhus ..... 2 weeks					
M. 2, { fever ..... 21 days { convulsions ..... 18 hours					
M. 40, typhus ..... *					

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Deaths from violence, 21; from privation, 1; from cerebral apoplexy, 8; from other specified causes, 16; from causes not specified, 15. TOTAL, 61 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 46.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 17th April, 1847.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive with weak tension at each ex- amination.	} See General Remarks.	Overcast with cirrostratus throughout the day. Rain was fallig generally.
MON.	At 1h. a.m. positive and weak. Nothing was shewn from that time till 9h. a.m., when it became positive with strong ten- sion, and continued so throughout the day.	} See General Remarks.	Overcast till 9h. a.m.; from that time till noon, one-half of the sky was covered; overcast after- wards till midnight. A thin rain was falling between 7h. and 9h. a.m.
TUES.	No electricity was shewn till 5h. a.m. From 5h. a.m. till 7h. a.m. strong ne- gative electricity was shewn. Positive and weak from 7h. a.m. till midnight.	See General Remarks. } Rain falling heavily. } See General Remarks.	Overcast throughout the day with cirrostratus and scud. Between 5h. and 7h. a.m. rain was falling heavily.
WED.	Positive with tension moderately strong throughout the day.	} See General Remarks.	Overcast till 3h. 20m. a.m.; from that time till noon the amount of cloud was variable; overcast afterwards till midnight, except between 8h. and 9h. p.m., when the sky was cloudless.
THURS.	Positive and weak throughout the day, except between 7h. and 9h. a.m., when the tension was moderately strong.	} See General Remarks.	Overcast till 5h. 20m. a.m.; from that time till noon about one-half of the sky was covered; nearly overcast afterwards till 10h. p.m., and at midnight about one-half of the sky was covered. Hall and sleet fell at intervals during the morning.
FRID.	Positive and weak till 7h. a.m. Maxi- mum occurred at 1h. 30m. and 9h. 30m. p.m. At 9h. 30m. a.m. and 5h. 30m. p.m. no- thing was shewn. At other times during the day the amount of electricity was variable	} See General Remarks.	The amount of cloud throughout the day was exceedingly variable; sometimes the sky was com- pletely overcast; at other times one-half was covered, and at others it was cloudless. The pre- vailing clouds were cirrostratus, cumulostratus, and scud.
SAT.	Positive and weak till 3h. a.m. Throughout the remainder of the day the electricity was positive with strong tension.	} See General Remarks.	The sky was cloudless at 1h. a.m., and overcast at 3h. a.m.; from that time till noon about one- half of the sky was covered; throughout the remainder of the day the amount of cloud was variable. The prevailing clouds were cirrostratus and scud.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neigh-  
bourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 37.7; and the mean reading at 7h. 30m. p.m., was 44.1; the mean readings at the Royal Observatory for the same times were 38.0 and 42.4 respectively.

† The mean direction of the wind for the week, with the exception of the first two days, has been N. and N.N.E.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, April 24th, 1847.

ANNUAL SERIES VIII.]

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population		Deaths registered in the Week		Births registered in the Week	
Males .....	468	Males .....	502	Males .....	718
Females .....	446	Females .....	479	Females .....	699
Total .....	914	Total .....	981	Total .....	1417

Deaths registered in this the fourth week of the second quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—  
 (1840) | (1841) | (1842) | (1843) | (1844) | (1845) | (1846) | (1847)  
 869 | 922 | 798 | 913 | 880 | 904 | 856 | 967  
 Deaths in the districts added in 1847..... 14

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 13 births and 14 deaths.

The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

\* The age of 1 person, whose death is enumerated amongst those caused by violence, is not stated.

† A woman is reported to have died in the sub-district of Christchurch, St. Saviour's, of "natural decay," at the advanced age of 100 years.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 16.

(The tabular abstract on the first page is for the week ending Saturday, April 24th. The following selection of cases is made from the returns for the week ending April 17th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Burns and Scalds:—	duration
Plasterer's boy, 16 ( <i>post mort.</i> ), fracture of the skull—laceration of the brain and spleen, by falling from a scaffold when at work, lowering a sack of cement by a pulley—the rope suddenly broke by being twisted round a rough iron bar (at the House of Lords) .....	<i>instantly</i>	Ropemaker, 35, injury of the brain from falling off a cart, while at work, pulling a rope which unexpectedly yielded .....	15 hours	F. 3, dysentery—effects of a hurn .....	*
In St. Thomas' Hospital, apprentice in the "Teviot," a Newcastle collier, 16, erysipelas caused by a fracture of his skull, by falling into the hold of the "Teviot," at Dowgate Wharf .....	14 days	Son of a labourer, 2, accidentally crushed on the head to death by a waggon.		In Guy's Hospital, son of a sawyer, 4, burnt by his pinafore taking fire, whilst playing with a piece of lighted string (at Tanner's Hill, Deptford) .....	6 days
In Guy's Hospital, chaff cutter, 63 ( <i>post mort.</i> ), fracture of his skull and four ribs—and injury to his lung, by falling from a ladder at Wandsworth Road .....	24 hours	F. 48 ( <i>no inquest</i> ), disease of the spine from an accident .....	4 months	In Guy's Hospital, daughter of a labourer, 2, burnt by her clothes taking fire, whilst alone in her father's apartment (in the County of Cork) .....	3 weeks
In Guy's Hospital, foreman to a bricklayer, 42, mortal injuries caused by falling from a scaffold in Cannon Street .....	1 hour	F. 70, { broken thigh .....	*	F. 76, scald on the foot, accidental .....	11 days
M. 41 ( <i>no inquest</i> ), lacerated wound in the temple, from an accidental fall .....	12 days	( <i>no inquest</i> ) { bedsores .....	15 days		
erysipelas .....	6 days	<i>It should have been stated how the injury was caused.</i>			
typhus .....	6 days	F. 8, { suppuration about the parotid .....	3 weeks	Poison:—	
Rigger, 59, accidental death by a fall from the yard arm of a ship.		( <i>no inquest</i> ) { hectic fever .....	10 days	In Westminster Hospital, shoemaker, 44 ( <i>post mort.</i> ), oxalic acid—suicide in temporary insanity, from being out of employment a few minutes .....	
In St. Thomas' Hospital, labourer, 21, injury to his chest by a ball of iron falling on him at Bankside .....	2 hours	blow inflicted by a school slate on the angle of the jaw .....	about 24 days	F. 5 mon., laudanum inadvertently mixed with aniseed, and used not to destroy life, but as a sedative .....	*
		<i>Drowning:—</i>			
		Spinster, 34, found drowned in the River Thames—no marks of violence—(supposed to have been under water 7 weeks.)			
		Labourer, 25, suffocation from drowning.			
		M. 33, found dead without marks to account for death—apparently drowned in the lock of the West India Dock basin.			

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	University College H.:—	Fever H.:—	duration
M. 2, pleuro-pneumonia .....	*	M. 40, bronchitis .....	M. 43, { granular disease of kidneys. <i>long standing</i>	
Westminster H.:—		M. 15, continued fever .....	(post mort.) { pleuro-pneumonia .....	23 days
M. 33, { hemiplegia .....	11 days	{ purulent otorrhœa .....		
M. 66, strangulated hernia .....	16 hours			
Charing Cross H.:—No deaths registered.		M. 22, { meningitis .....	from Holborn.	
Middlesex H.:—		{ extensive abscess of middle lobe of brain .....		
M. 47, petechial fever .....	7 days	8 days		
M. 41, { apoplexy .....	10 hours	M. 37, phthisis pulmonalis .....	pneumonia of right and subsequently left lung .....	
(post mort.) { nutmeg liver .....	*	24 days		
F. 60, { cancer of the breast.....	12 months			{ endocarditis, supervening on former heart disease .....
operation .....	*	on the 8th day of pneumonia		
{ erysipelas—pleuro-pneumonia .....	*	mitral valve contracted—excessive thickening of pericardium, from former pericarditis.		
F. 32, lumbar abscesses .....	11 weeks		Small Pox H.:—

In the return for week ending April 17th, causes of deaths were—

(1) Certified by written statement of Medical Attendant in.....	892 cases.
(2) Attested by Coroner, or stated by him to be not ascertainable, in.....	33 „
(3) Not certified, in consequence of deceased not having been attended by qualified practitioners.....	16 „
(4) Not certified.....	40 „

TOTAL... 981

See Return of Guy's Hospital.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 13; apoplexy, 1; disease of heart, 2; intemperance, 1; other specified causes, 7; causes not specified, 4. TOTAL, 33 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 45.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			The sky was generally about one-half covered with cumuli, cirrostratus, and masses of scud throughout the day.
MON.			The sky was about one-half covered till noon, and generally overcast during the remainder of the day.
TUES.			Cirrostratus and scud covered one-half of the sky till about 4h. a.m. Overcast from that time till 8h. a.m., when it became cloudless for a short time. About two-thirds were then covered till 6h. p.m., and cloudless afterwards during the remainder of the day.
WED.	The apparatus has been under	repair throughout the week.	The sky was one-half covered with cloud till 3h. a.m.; cloudless from that time till 9h. a.m., and generally overcast during the remainder of the day.
THURS.			Overcast till about 4h. a.m.; very variable in amount from that time till 4h. p.m., being sometimes overcast, and at others nearly cloudless; generally clear during the remainder of the day.
FRID.			Cloudless till 2h. a.m.; the sky was then about one-half covered till 2h. p.m., and cloudless during the remainder of the day.
SAT.			From 1h. a.m. till 9h. a.m., and from 3h. 20m. p.m. till 7h. 30m. p.m. the amount of cloud was small, covering about one-fourth of the sky, except at 9h. 0m., when it was nearly overcast; at other times during the day the sky was cloudless.

The height of the eistem of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 39°5; and the mean reading at 7h. 30m. P.M., was 47°3; the mean readings at the Royal Observatory for the same times were 39°2 and 45°7 respectively.

† The direction of the wind during the week was variable, but principally from the N. and E.

ERRATA.—In the report of the week ending March 13th, in the column under rain, and ranging with the 11th day, for 0·01 read 0·10; and for the sum of the rain during the week, for 0·04 read 0·14.

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, May 1st, 1847.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

Deaths in the districts added in 1847.....							9		

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 26 births and 9 deaths.

The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

\* The age of 1 person, whose death is assigned to typhus, is not stated.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 17.

(The tabular abstract on the first page is for the week ending Saturday, May 1st. The following selection of cases is made from the returns for the week ending April 24th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. It should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Hanging:—	duration
In Westminster Hospital, stable-helper, 40, (post mort.) shock of the system—fell over the banisters of a staircase at a house in Whitehall gardens, when carrying a box up stairs 6 days		M. under 40, (unknown), body greatly decomposed from being some weeks probably under water.		F. 22, hanging herself by a handkerchief to the hedpost, in temporary insanity.	
delirium tremens	2 days	Sailor, 23, accidentally drowned by a fall from the ship "William."		Cheese-monger 46, suicide by hanging himself, being of unsound mind.	
M. 78, rupture of a vessel of the brain, by accidentally falling down stairs	18 days	M. (age unknown), drowned himself in the waters of the new cut of the river Lea, in what state of mind unknown.		Burns:—	
Tailor 85, (no inquest), wound of the head—fell down the steps of Hungerford market	7 days	F. 22, found struggling in the water, and crying "save me, save me," and afterwards drowned therein; but how she came there no satisfactory evidence appeared.		Sou of a painter 3, accidental burn	*
erysipelas	*	Carpet-blocker, 32, suicide by drowning himself in the river Thames, being at the time of unsound mind.		This entry is obviously imperfect.	
F. 89, (no inquest), fractured neck of thigh-bone—old age	*	Apprentice seaman of the brig "Forsyth" of London, 14, found drowned in the river Thames, without marks of violence—no proof by what means he came into the water.		Neglect, &c.	
Wounds:—				F. newly-born, neglect and exposure to cold at the birth, without medical aid—wilfully murdered, by whom unknown.	
M. artificial-flower-maker, 27, suicide by cutting his throat, being of unsound mind	*				
F. 28, wilfully murdered by James Young, by having her throat cut	*				
F. 8 wks., wilfully murdered by James Young, by having her throat cut	*				

### FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	Middlesex Hospital:—(continued.)	duration	St. Thomas' H.:—	duration
M. 56, inflamed synovial membrane of wrist—diffuse inflammation of forearm	*	F. 23, { tubercles of lungs, liver, spleen and kidneys	*	F. 39, { diseased mitral valves	*
F. 30, { diseased heart	18 months	(post mort.) { acute meningitis of cerebrum and spinal cord	15 months	F. 29, diseased kidneys—dropsy	3 months
(post mort.) { motting degeneration of kidneys	*			M. 30, chronic ulcer—hæmoptysis	some time
dropsy	5 months	University College H.:—No deaths registered.		M. 42, epistaxis	1 month
Westminster H.:—		Fever H.:—	duration	M. 36, { diseased kidneys	*
M. 28, phthisis pulmonalis	1 year	F. 31, { pneumonia	*	(post mort.) { anasarca	6 months
F. 51, (post mort.), febril—dothinenteria	7 days	(post mort.) { in hospital 1 day; from Broad-street, city.	*	M. 50, bronchitis	*
Charing Cross H.:—		Small Pox H.:—No Deaths registered.		M. 40, typhus	*
M. 27, { two calculi in the bladder	*	King's College H.:—		M. 22, pleuritis	*
(post mort.) { inflammation of the kidneys	*	F. 33, heart diseas.—dropsy	*	M. 18, jaundice	*
typhoid fever	*	St. Bartholomew's H.:—		Guy's H.:—	
Middlesex H.:—		M. 29, pericarditis—pneumonia—pleuritis	*	M. 24, rheumatism—pericarditis—diseased aortic valves	2 years
M. 49, petechial fever	*	M. 40, cancer of the kneejoint—amputation	*	M. 26, stricture	*
{ emphysema pulmonum	*	M. 40, disease of the anklejoint and affection of the lungs	*	M. 21, phthisis	*
M. 56, { granular liver	*	M. 58, hydrothorax	*	M. 33, { plenro-pneumonia	3 weeks
{ dilated and hypertrophied ventricle	*	M. 23, phthisis—hydrothorax	*	{ gangrene of lung	*
{ œdema pulmonum	*	M. 20, phthisis	*	F. 26, fistula—erysipelas after operation	*
(post mort.) { contracted liver	*	M. 32, delirium tremens	*	F. 18, gastro-enteritis	12 days
{ large kidneys containing albuminous deposit	5 years	London H.:—No deaths registered.		Dreadnought H.:—	
				M. 23, { dysentery	13 months
				(post mort.) { peritonitis	7 days
				Royal Ordnance H.:—	
				Gunner in the Royal Artillery, 40, consumption	106 days

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS,  
INTEMPERANCE, PRIVATION, ETC.

<i>Small Pox:—</i>	<i>duration</i>	<i>Typhus, &amp;c. (continued):—</i>	<i>duration</i>	<i>Childbirth (continued):—</i>	<i>duration</i>
F. 2, { small pox.....7 days 1st attack; never vaccinated—no medical attendant.		F. 30, typhus—diarrhea ..... 14 days M. 33, fever..... 7 days F. 25, fever—convulsions ..... 9 days M. 5, typhus ..... *		F. 33, hæmorrhage—premature labour ..... 20 min. F. 27, fever after confinement ..... 8 days F. 32, { placenta prævia ..... 24 hours after delivery hæmorrhage ..... *	
M. 20, { variola ..... 7 days cerebral effusion..... }		M. 6, fever ..... *		F. 26, { childbirth ..... 10 days puerperal fever ..... 7 days	
<i>In all cases it should be stated whether the deceased had been vaccinated with effect.</i>					
M. 9 mon., small pox, without previous vaccination—no medical attendant..... *		<i>See Hospital Returns.</i>		F. 21, { childbirth ..... 3 days childbirth convulsions ..... }	
F. 2, small pox (never vaccinated) ..... 2 weeks		<i>Ague:—</i>		F. 28, parturition—puerperal convulsions..... *	
M. 4, { small pox ..... 3 weeks cancrem oris..... }		F. 33, ague..... *		F. 41, inflammation after childbirth..... 1 week	
M. 20 days, variola (natural) ..... 9 days		<i>Remittent Fever:—</i>		{ pleuripneumonia ..... 4 days pneumonia ..... 4 days	
F. 4, small pox (vaccinated)..... 14 days		F. 2, cerebritis—febris remittens..... 8 days		(p.m.) { parturition ..... 3 days hydrothorax ..... a few hours	
M. 1, small pox (never vaccinated)..... 10 days		<i>Infantile Fever:—</i>		<i>Other cases of Childbirth not classed under this head:—</i>	
M. 42, { confluent small pox ..... 2 days typhoid fever ..... }		M. 1, { infantile fever ..... 3 weeks hydrocephalus ..... 10 days		F. 34, { phthisis ..... *	
Sisters, { 3, small pox (never vaccinated) .... 14 days 3, small pox (never vaccinated) .... 14 days		<i>Syphilis:—</i>		{ childbirth ..... 5 weeks uterine hæmorrhage..... }	
M. 8, { small pox ..... *		F. 52, secondary syphilis ..... *		F. 52, { icterus ..... 4 years general debility..... }	
vaccinated with effect 7 years before.		M. 27, { abscesses on both lungs ..... 10 months F. 27, syphilitic ulceration of vagina ..... *		{ hæmorrhage after parturition..... *	
<i>Typhus, &amp;c.:—</i>		<i>Hæmorrhage:—</i>		F. 28, { tumour in the uterus (19 days' treatment)..... *	
M. 49, { gastric fever ..... 11 weeks plcurisy ..... 10 weeks diarrhea ..... 2 weeks		M. 11 days, spitting of blood ..... 4 days F. 14, epistaxis ..... 6 months		<i>Delirium Tremens:—</i>	
F. 5, atrophy from fever ..... 11 weeks		F. 61 (inquest), natural death—effusion of blood from rupture of a vessel of the lungs ..... *		M. 36, delirium tremens ..... 3 days	
F. 62, fever—bronchitis..... 10 days		F. 56 (inquest), natural death—rupture of a blood vessel of the thorax ..... *		M. 40, delirium tremens ..... 1 week	
F. 5 mon., fever ..... 3 weeks		M. 59, rupture of a blood-vessel ..... *		<i>See Return of St. Bartholomew's Hospital.</i>	
M. 5, { typhus ..... 14 days following a mild attack of modified small pox after vaccination..... *		M. 5 mon. (post mort.), hæmorrhage from the lower intestines ..... 48 hours		<i>Intemperance; Privation:—</i>	
F. 63, typhus ..... 14 days		<i>See Return of St. Thomas' Hospital.</i>		<i>No deaths classed under these heads.</i>	
F. 36, brain fever ..... 13 days		<i>Other cases of hæmorrhage are classed under apoplexy, &amp;c.</i>		<i>Want of Breast-milk, &amp;c.:—</i>	
F. 5, { low fever ..... 2 weeks hydrocephalus..... }		<i>Malformation:—</i>		F. 6 mon., { diarrhœa ..... 12 days artificial food ..... *	
M. 18, fever ..... 1 week		M. 4 mon., morbus coeruleus.		F. 26 days, { pining for the breast ..... 7 days diarrhœa ..... *	
M. 18, typhus ..... 10 days		M. 14 days, exhaustion from want of nourishment, being from birth unable to suck, from some malformation in the organs of deglutition.		<i>Miscellaneous Causes:—</i>	
F. 74, { febris ..... 14 days erysipelas ..... 7 days		F. 42 hours, malformation of the heart.		F. 35, (post mort.), enlargement of the liver; gallstones; tubercular cavities in the lungs, adhesion, &c. .... 5 years	
F. 57, continued fever ..... *		<i>Hernia:—</i>		F. 57, { bronchocele ..... many years rupture of the thyroid vein producing suffocation by pressure upon the trachea ..... 30 minutes	
F. 63, fever ..... *		F. 58, { strangulated femoral hernia ..... *		F. 75, nutmeg liver—anasarca ..... *	
M. 27, febris—hronchitis ..... *		operation ..... 8 hours		F. 48, ovarian dropsy..... 5 years	
F. 10, typhus ..... 5 weeks		F. 77, strangulated hernia..... 2 days		M. 62, { asthma and disease of the heart .. several years angina pectoris ..... 12 hours	
F. 5, typhus ..... 6 weeks		<i>Diabetes:—No deaths registered from this cause.</i>		M. 58, (inquest) natural death from diseased heart, which may have been accelerated by violence used to restrain him when in a state of great mental excitement..... *	
M. 77, low typhus..... *		<i>Stone:—</i>		M. 77, { condyloma ..... *	
M. 48, typhus ..... *		<i>See Return of Charing Cross Hospital.</i>		senilitas progressive.	
M. 28, typhus..... *		<i>Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.</i>		M. 15, rheumatism—hypertrophy of the heart, dropsy ..... 5 months	
F. 46, typhus ..... 10 days		F. 30, { childbirth ..... 1 week convulsions ..... *		caused by over-exertion as an errand boy.	
F. 76, fever..... 10 days		F. 26, { delivery ..... 2 weeks hæmorrhage ..... 1 day		M. 14, malignant tumour of the anterior mediastinum, growing into the right lung and nearly surrounding the heart..... *	
M. 22, continued fever terminating in effusion on the brain ..... 3 weeks		F. 19, { childbirth ..... 9 days puerperal peritonitis..... 5 days			
F. 26, typhus ..... 14 days		F. 27, { childbirth ..... 14 days puerperal peritonitis ..... 10 days			
M. 61, fever ..... 15 days					
F. 32, fever—dysentery..... *					
M. 10, synochus..... 9 days					
M. 22, { fever..... 3 months diarrhœa ..... 3 weeks					
M. 4, synochus petechialis ..... *					
F. 38, { typhus ..... 25 days mortification of intestines..... }					
F. 2, typhus ..... 2 weeks					
F. 3, fever—meningitis ..... 4 weeks					
M. 80, fever—debility ..... *					

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 15; apoplexy, 3; disease of heart, 1; other specified causes, 9; causes not specified, 12.  
TOTAL, 40 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was held, is 37.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 1st May, 1847.

Day.  —  1847	Phases  of the  Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND							Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive but weak at each examination.	See General Remarks.	Generally clear during the morning. Cumuli and cirrostrati were scattered about the sky during the remainder of the day.
MON.	Occasionally no electricity was shown. At other times it was positive, but weak.	See General Remarks.	The sky was cloudless till 2h. a.m., and about one-half covered with cirrostratus and scud from that time till 4h. a.m. Overcast afterwards throughout the day. Rain was falling heavily a little before noon.
TUES.	Positive and very weak, except at 1h. 20m. p.m., and from 9h. p.m. to midnight, when it was positive, with tension moderate.	See General Remarks.	Generally overcast till 4h. p.m., and about one-fifth covered with cloud during the remainder of the day. Slight rain was falling occasionally during the early part of the morning. Cumuli and cumulostrati were prevalent during the afternoon.
WED.	Positive and tension moderate till 6h. a.m. Nothing was shown from that time till 9h. a.m. Strong positive and negative electricity during the remainder of the morning. Frequent sparks were shown. Positive and tension moderate from 4h. p.m. to 10h. p.m.	See General Remarks. Occasional rain. The quality of the electricity changing with every cloud passing over the zenith.	Cloudless till 4h. a.m.; the sky was then generally about one-half covered with cirrostratus, cumuli, and fleecy clouds, throughout the day, except at about noon, when it was overcast with rain falling.
THURS.	Positive but weak till 9h. a.m. Very strong negative, and occasional positive, electricity, from 9h. 20m. a.m. till 1h. p.m. Negative and very active from 3h. to 6h. p.m. Positive and tension strong during the remainder of the day.	Occasional rain and hail. Thunder was heard between 9h. 20m. p.m., and 9h. 50m. p.m. Rain falling.	The sky was generally more than one-half covered with cloud throughout the day, and occasionally quite overcast. There were several squalls of hail and rain during the morning and afternoon. Several peals of distant thunder were heard from dark clouds in the S.W., between 9h. 20m. p.m. and 9h. 50m. p.m.
FRID.	Negative and very active at about 3h. p.m., and from 5h. 10m. to 5h. 30m. p.m. At other times it was positive with tension moderate.	Slight rain falling.	Cirrostratus and fleecy clouds covered about one-half of the sky till 2h. a.m., from which time till 8h. p.m. it was mostly overcast. At about noon the sky was covered with cumulostrati and cirrostrati. It was also very gloomy. Slight rain was falling occasionally during the afternoon. Nearly cloudless from 9h. p.m. till midnight.
SAT.	Positive and tension moderate throughout the day, except at about 1h. 20m. p.m., when it was negative and very active.	Rain. Cumulostrati prevalent.	The greater part of the sky was clear till about 9h. 20m. a.m., but generally overcast during the remainder of the day. Thunder was heard in the S.E., between 10h. 10m. and 10h. 20m. a.m., at which time there was a squall of hail and rain. Slight rain was falling during the afternoon and evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. During the last four days of this week the anemometer has been under repair.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 45.3; and the mean reading at 7h. 30m. P.M., was 48.0; the mean readings at the Royal Observatory for the same times were 45.2 and 48.3 respectively.

† The mean direction of the wind during the week is S. W

# A TABLE OF Births and Deaths registered in London, During the Week ending Saturday, May 8th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 19]

Deaths registered in this the sixth week of the second quarter, and in each of the corresponding weeks of the same quarter of the seven preceding years:—							
(1840) 869	(1841) 776	(1842) 788	(1843) 898	(1844) 812	(1845) 829	(1846) 841	(1847) 968
Deaths in the districts added in 1847.....							
19							
(average of the series of weeks, exclusive of the last) 830							

NOTE.—The above return contains births and deaths which occurred in the sub-district of Hampstead; and in the sub-districts of Plumstead and Charlton, Lee, Lewisham, Eltham, and Sydenham, added at the commencement of this year for the first time. The increase which arises from these additional returns amounts, for the present week, to 23 births and 19 deaths.

The mortality of Wandsworth and Clapham was added to the Weekly Returns for London in 1844. In this comparison, a correction is made for this District, in the corresponding weeks of the four preceding years.

FOURTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued).—

In the week ending May 1st, causes of deaths were—

(1) Certified by written statement of Medical Attendant in .....	893 cases.
(2) Attested by Coroner, or stated by him to be "natural," or not ascertainable, in.....	44 "
(3) Not certified, in consequence of deceased persons having had no medical attendance.....	19 "
(4) Not certified .....	27 "

TOTAL... 983

Deaths under 1st and 2nd heads show a proportion to the total number of more than 95 per cent. It must be understood, that the term "certified" signifies, that in all cases to which it is applied, a written statement of the cause of death has been given by a qualified practitioner. Besides the 19 enumerated under the 3d head, more cases in which there was no medical attendance are probably included under the 2nd and 4th heads.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 14; apoplexy, 3; disease of the heart, 4; intemperance 1; other specified causes, 16; causes not specified, 6.—TOTAL, 44 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 33.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 8th May, 1847.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	In the morning nothing was shown. Positive and tension moderate in the after- noon.	See General Remarks.	During the morning it was overcast, with slight rain falling at intervals. Cirrostratus, fleecy clouds, and scud generally covered the sky at other times. There were occasional extensive breaks during the afternoon.
MON.	Negative and very active from 11h. a.m. till 4h. p.m. At other times positive, with tension occasionally very strong.	Rain falling occasionally.	The sky was overcast throughout the day, except from 5h. to 8h. a.m., between which times it was cloudless. Rain was falling occasionally from 11h. a.m. till 4h. p.m. There was a violent squall of wind and rain from 1h. 30m. till 1h. 40m. p.m. At 1h. 35m. a sudden gust of 3lbs. 2 on the square foot was shown at the anemometer, and at 1h. 30m. p.m. there was a gust of 4lbs. 5 shown.
TUES.	Nothing was shown till 6h. a.m. Negative and tension moderate from 11h. a.m. till 2h. p.m. At other times positive, with tension moderate.	Rain falling occasionally.	Generally overcast till 6h. p.m.; it was then nearly cloudless till 7h. p.m., and about three parts covered during the remainder of the day. There were a few showers during the morning.
WED.	Nothing was shown at 5h. 20m. a.m.; at about 5h. p.m. and at midnight. At other times it was positive, with moderately strong tension.	See General Remarks.	The greater part of the sky was covered with thin cirrostratus and haze till 6h. a.m., at which time a thick fog prevailed; generally clear from that time till 10h. a.m., and mostly overcast during the remainder of the day.
THURS.	Nothing was shown till 5h. a.m.; also from 5h. p.m. till 8h. p.m. At other times it was positive, with tension occasionally very strong.	See General Remarks.	About four-fifths of the sky were generally covered with cumuli, cirrostratus, and scud, except at about 3h. a.m., when it was cloudless, and from 2h. p.m. to 5h. p.m., between which time it was about one-fourth covered with detached cumuli, cirrostratus, and reticulated cirri. It was foggy during the early part of the morning.
FRID.	Positive and tension generally weak throughout the day.	See General Remarks.	Cirrostratus and fleecy clouds covered one-half of the sky till 6h. a.m. Overcast during the remainder of the day. Slight rain was falling at about 3h. p.m.
SAT.	Positive and tension moderate till 4h. a.m., at 9h. a.m., and from 1h. till 4h. p.m. Negative and tension occasionally strong from 5h. to 8h. p.m. At other times nothing was shown.	Rain falling occasionally. Rain falling.	Generally overcast throughout the day, with rain falling at intervals.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. It has been under repair throughout the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 44.9; and the mean reading at 7h. 30m. P.M., was 50.3; the mean readings at the Royal Observatory for the same times were 45.0 and 49.5 respectively.

† The direction of the wind has been very variable throughout the week, but principally S.

## A TABLE OF

## Births and Deaths registered in London,

During the Week ending Saturday, May 15th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

DEATHS registered in LONDON, in five corresponding weeks of eight years :—

No. of week..	16	17	18	19	20	Average
1840	917	882	859	882	785	865
1841	934	935	818	789	762	848
1842	834	808	781	798	830	810
1843	986	923	904	908	896	923
1844	856	890	887	822	872	865
1845	940	916	895	841	847	888
1846	979	868	843	853	850	879
1847	981	981	983	987	978	982
Average of first 7 years	921	889	855	842	835	868

The mortality of Wandsworth and Clapham, and that of Lewisham and sub-district of Hampstead, are included in the above table throughout the 8 years, though the former was not added to the Weekly Metropolitan Returns till 1844, nor the latter till 1847.

1	2	3	4
Ages	Deaths registered last week in London	Deaths which would have been registered if the rate of mortality had been the same as in Dorsetshire	Excess of Mortality in London during the week
0—15	389	279	110
15—35	142	138	4
35—55	177	103	74
55 and upwards	270	164	106
All Ages	978	684	294

The above Table (2nd Col.) shows the number of persons who died in London during the week ending May 15th, 1847, under 15 years of age; 15 and under 35; 35 and under 55; 55 years of age and upwards, respectively.

The third column is an approximation to the number of deaths which would have happened during the week at the same ages, if the rate of mortality at the several quinquennial and decennial ages of life had been the same as prevailed among the whole population of Dorsetshire in the 7 years 1838-44.

The fourth column exhibits the number of persons who died during the week in London, but who would not have died if the rate of mortality had not exceeded that in Dorsetshire. The mortality of males between the ages of 45—55 years, in Dorsetshire, was at the rate of 14 in 1000 annually: the mortality in the same years (1838—1844), and at the same ages in London, was 27 in 1000: and at all ages, the mortality in Dorsetshire is 20; in London, 27 in 1000. The population of London, it is believed, is as well provided with food and clothing as the people in Dorsetshire; the excess of sickness and mortality in London must, therefore, be ascribed to malignant causes, the greater part of which undoubtedly admit of removal, or mitigation.

SCURVY.

In the Quarterly Report which appeared in February last, apprehension was expressed that scurvy may break out among the people of this country. The necessity of precautionary measures was also adverted to in the following terms :—  
“ Dr. Baly, the physician to the Milbank Penitentiary, showed some time ago that scurvy was very prevalent in prisons from the dietaries of which potatoes were excluded, and did not exist where potatoes were used. The potato contains a small quantity of a vegetable acid, in combination with potash (bitartrate of potash, or cream of tartar). It is certain that scurvy, which was formerly common, has almost disappeared since the potato entered largely into the food of the population. If, now that the potato has grown scarce, this disease characterised among other symptoms by swollen bleeding gums again become prevalent, its simple prophylactics should be had recourse to.”  
Although no deaths have yet been directly ascribed to scurvy in London, the disease, it is now ascertained, has appeared in many parts of the country. Several cases too have shewn themselves at the London Hospitals. Under these circumstances the following practical suggestions of Dr. Baly deserve the attention of the public. The poorer classes particularly should be properly informed on the subject. Where green vegetables and lime juice cannot be procured, a weak acidulated drink of cream of tartar and sugar may be tried; for it is the presence of the former salt, which probably renders the potato antiscorbutic.  
“ It cannot be doubted,” says Dr. Baly, “ that the prevalence of Scurvy at the present time amongst the poor in Scotland, some parts of England, and even in London, is owing to the scarcity of vegetables, and especially of that kind of vegetable which alone the poor can usually obtain in quantity adequate for the preservation of health, namely, potatoes. The want of potatoes, as I have shown

“ elsewhere, was the cause of the appearance of scurvy in many prisons and other public institutions at former periods. The potato being now so scarce, other articles of diet have been substituted for it. The article substituted has been for the most part some cheap kind of grain, as Indian corn, rice, oats, barley, peas, or beans. But the farinaceous food made from grain has no anti-scorbutic property. It has been necessary, therefore, to supply this defect by flavouring the farinaceous food with lime juice, the great prophylactic against scurvy in the navy; or to combine with the food some fresh vegetable, such as turnips (Swedes), carrots, cabbages, onions, cress, and mustard. Both these measures, when tried, have been successful.  
“ A small quantity of lime juice would be sufficient to give anti-scorbutic properties to the rice, meal, or Indian corn, food used by the poor, or an acidulous drink might be made with it. In either way, it would be an efficacious, and, I think, an economical preventive of the disease. Its use might be introduced with great advantage into workhouses and amongst the out-door poor.  
“ The fresh vegetables I have named could seldom be procured by the poor themselves in sufficient quantity, but sometimes, perhaps, they might use plants which grow wild, such as the common water-cress and scurvy-grass. These are powerful anti-scorbutics, and most edible green vegetables, especially those which have an acid taste, possess the same properties.  
“ The important point, however, seems to be, that the poor and the Guardians of the poor should be instructed that farinaceous foods, made of grain or meal of any kind, will not alone serve as substitutes for potatoes; that either some green vegetable or succulent root must be eaten with them; or the deficient antiscorbutic property supplied with lime juice.”

# EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 19.

(The tabular abstract on the first page is for the week ending Saturday, May 15th. The following selection of cases is made from the returns for the week ending May 8th.)

## RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Hanging:—	duration
F. 48, concussion of the brain by accidentally falling over the step of a door .....	*	M. 10, drowning—not known how he came into the water, but probably suicide.		M. 64, suicide by hanging—of unsound mind.	
F. 53, injury of the head by falling down stairs .....	instant	F. probably 50, probably from drowning—no marks of violence.		M. about 23, hanged himself by a cord to a bed-post—his feet off the ground (temporary insanity).	
F. 76, accidentally run over by a dray, and killed on the spot .....		Labourer, 21, accidentally drowned by falling from a ladder into the River Thames.		Scalds:—	
F. 80 (no inquest), simple exhaustion, hastened by non-united fracture of thigh from accident .....	18 months	Sea apprentice, 19, accidentally drowned by falling from a buoy into the river.		Daughter of a plumber, 1, scalds by pulling a basin of hot broth over her chest .....	4 weeks
In Guy's Hospital, M. 33 (no inquest—post mort.), pneumothorax from an injury .....	2 years	Draper's assistant, 36, drowned himself, being of unsound mind (under water 12 days).		Neglect:—	
acute peritonitis .....	*			M. newly born, wilfully murdered by neglect at birth—guilty person or persons unknown.	

## FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	Fever H.:—	duration	St. Thomas' H.:—	duration
M. 50, scirrhus of the penis .....	*	M. about 28, { fever .....	3 weeks	F. 14, { hypertrophy of the heart .....	*
Westminster H.:—		M. about 28, { from Philip's Gardens, Tottenham Court Road.		F. 14, { diseased mitral valves .....	10 months
M. 36 (post mort.), pleuritis—empyema .....	2 months	M. 11, { fever .....	3 weeks	F. 64, { dropsy .....	3 months
F. 54, { strangulated hernia .....	*	M. 11, { from Covent Garden.		F. 64, { enlarged liver .....	*
F. 54, { operation .....	20 days	Small Pox H.:—		M. 36, phthisis .....	18 months
F. 21, typhus .....	14 days	F. 13, small pox, natural, confluent, hemorrhagic .....	5 days	M. 44, phthisis .....	20 weeks
F. 29 (post mort.), cephalitis .....	1 month	King's College H.:—		M. 34, { chronic peritonitis .....	*
Charing Cross H.:—		M. 32 (post mort.), phthisis—pericarditis .....	14 days	M. 34, { tubercles in lungs .....	*
M. 40 (post mort.), acute peritonitis—typhoid fever .....	*	St. Bartholomew's H.:—		Guy's H.:—	
M. 46 (post mort.), calculus—irritation and ulceration of the bladder .....	*	M. 32, disease of the kidneys .....	*	M. 53, typhus .....	8 days
Middlesex H.:—		M. 56, aneurism of the aorta .....	*	M. 52, apoplexy .....	6 days
M. 21, diseased hip .....	3 years	M. 5, disease of the hip joint .....	*	F. 23, typhus—purpura .....	12 days
M. 22, syphilis .....	4 months	F. 18, chronic endocarditis, with anasarca .....	*	F. 5, { curvature of the spine .....	*
M. 56, { strangulated femoral hernia .....	*	London H.:—		(p.m.) { emphysema and bronchitis .....	20 months
M. 56, { operation .....	5 days	M. 30, { aneurism of the descending aorta .....	*	Dreadnought H.:—	
F. 16, brouchitis .....	*	(post mort.), { bursting into the left side of the chest.		M. 21 (post mort.), spontaneous gangrene of the integuments of the chest .....	8 days
University College H.:—No deaths registered.		M. 35, morbus cordis .....	3 years	M. 23 (post mort.), phthisis .....	8 weeks
		M. 38, pneumonia .....	*	Royal Ordnance H.:—	
		F. 35, { mitral disease of heart .....	*	Soldiers { M. 18, { acute catarrh .....	30 days
		(post mort.) { disease of kidney—first stage of morbus Brightii .....	*	in { M. 26, inflammation of windpipe .....	85 days
		anasarca .....	6 weeks	Royal { M. 22, scarlatina .....	11 days
				Artillery { M. 29, consumption .....	10 months

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, ETC.

Small Pox:—	duration	Remittent Fever:—	duration	Childbirth (continued):—	duration
M. 5 mon., small pox (not vaccinated) .....	*	M. 10, remittent fever .....	4 weeks	F. 37, { parturition .....	32 days
M. 2, variola .....	10 days	Syphilis:—		F. 37, { intermittent fever .....	*
NOTE.—It should be invariably stated, whether deceased had been vaccinated, and with effect.		F. 14 days, syphilitic eruption .....	*	F. 42, typhoid fever .....	*
M. 1, small pox (after vaccination) .....	*	F. 8 mon., syphilis—marasmus .....	*	F. 42, puerperal peritonitis .....	*
F. 5, small pox (1st attack—never vaccinated) 11 days		See Returns of Middlesex Hospital.		F. 35, { premature labour .....	10 hours
M. 6, { small pox .....	14 days	Hæmorrhage:—		F. 35, { flooding .....	2 hours
M. 6, { vaccinated when 3 months old.		F. 80 (inquest), apparently rupture of a vessel, found dead.		F. 31, { childbirth .....	2 days
M. 9, { small pox .....	4 days	Malformations:—		F. 31, { peritonitis .....	27 hours
M. 9, { without previous vaccination.		F. 2 days, malformation of the heart.		Tamour and Childbirth:—	
M. 2, small pox (natural) .....	10 days	M. 1, malformation of the heart—teething.		F. 35, { tumour in posterior wall of uterus .....	*
F. 4, small pox .....	14 days	F. 8 days, bladder and intestines imperfectly formed.		F. 35, { delivery .....	44½ hours
M. 6, { pneumonitis .....	1 month	Hernia:—		F. 35, { inflammation of womb and investing membranes .....	27½ hours
M. 6, { vaccinated with effect 5½ years ago.	7 days	M. 57 (post mort.), internal strangulation of the ilium .....	4 days	Delirium Tremens:—	
F. 2, natural small pox .....	9 days	F. 66, { old umbilical hernia .....	28 hours	M. 36, delirium tremens .....	1 week
M. 4 mon., { variola (natural) .....	10 days	F. 66, { strangulated .....	18 hours	Intemperance:—No deaths registered from this cause.	
M. 4 mon., { laryngitis .....	10 days	F. 66, { operation .....	*	Privation:—	
See Small Pox Hospital Returns.		F. 86, { hernia .....	28 years	No deaths in the present return classed under this head.	
Typhus, &c.:—		F. 47, umbilical hernia—peritonitis .....	*	Want of Breast-milk:—	
M. 56, continued fever .....	20 days	See Returns of Westminster and Middlesex Hospitals.		M. 6 mon., { inauition from want of breast-milk .....	3 months
F. 4, fever .....	*	Diabetes:—No deaths registered from this cause.		M. 6 mon., { purulent ophthalmia .....	3 weeks
F. 29, fever .....	2 weeks	Stone:—		F. 9 weeks, inanition from want of breast-milk and proper nourishment .....	since birth
F. 41, low fever .....	2 months	See Return of Charing Cross Hospital.		M. 4 mon., atrophy from want of breast-milk .....	*
M. 18, common continued fever .....	6 weeks	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.		M. 2 days, { inopia .....	2 days
M. 30, typhus mitior .....	7 days	F. 25, { abortion with flooding .....	1 week	M. 3 days, { inopia .....	3 days
F. 42, typhus .....	7 days	F. 25, { tetanus .....	4 days	F. 2 days, { inopia .....	2 days
F. 7, { congestive fever .....	3 weeks	F. 24, { difficult labour .....	*	F. 3 days, { inopia .....	3 days
M. 64, fever .....	3 days	F. 24, { puerperal peritonitis .....	10 days	Miscellaneous Causes:—	
M. 13 (inquest), fever (under medical treatment 14 days) .....	*	F. 32, puerperal fever .....	24 hours	M. 40, nephritis—anasarca, followed by ischuria, coma, and apoplexy .....	some years
M. 4, gastric fever .....	*	F. 24, { childbirth .....	about 22 days	M. 30 days, { inflammation of thymus gland .....	1 month
F. 7, typhus .....	14 days	F. 27, puerperal convulsions produced by a fright .....	3 days	(p.m.) { asphyxia .....	*
F. 8, typhus .....	14 days	F. 36, { confinement .....	3 days	M. 47, { asthma .....	10 years
M. 30, { diarrhoea—typhus .....	13 days	F. 24, { secondary disease, abscess of intestines, 60 days		(p.m.) { dilatation of right ventricle and auricle .....	2 years
M. 46, typhus .....	14 days	F. 24, { childbirth .....	21 days	M. 43, angina pectoris .....	— years
F. 15, fever .....	3 days	F. 24, { erysipelas .....	8 days	M. 40, colica pictoum .....	*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.	} See General Remarks.	The sky was overcast during the morning. There were occasional breaks during the afternoon and evening.
MON.	Nothing was shown till 5h. a.m.; at 3h. 20m. p.m.; and at about midnight. Positive and tension occasionally very strong from 5h. 20m. a.m. till 5h. p.m. Negative and active at 9h. 20m. p.m.	} See General Remarks. Rain falling.	The sky was overcast with cirrostratus and scud, and rain fell till 2h. 20m. a.m.; from this time till 5h. p.m. the sky was generally about one-half covered with cloud, and overcast during the remainder of the day. Rain was falling occasionally between 5h. p.m. and midnight.
TUES.	Negative and tension strong at 3h. 20m. a.m. Positive and tension moderate during the remainder of the day.	} Rain falling. } See General Remarks.	Overcast till 2h. p.m., with rain occasionally falling; detached cumuli, cirrostratus, and scud generally covered about one-half of the sky during the remainder of the day. It was very gloomy from about 5h. till 9h. 30m. a.m.
WED.	Positive but weak at 5h. 20m. a.m. Positive and tension moderately strong from 9h. a.m. till midnight.	} See General Remarks.	Nearly cloudless till 6h. a.m.; from this time thin cirrostratus and light clouds covered about one-half of the sky till 9h. a.m.; overcast from 9h. a.m. till 5h. p.m. The sky was partially clear during the evening, and became cloudless a little before midnight. Rain was falling at about 10h. a.m.
THURS.	Positive and tension very uniform throughout the day.	} See General Remarks.	Cloudless till 4h. a.m.; from that time till 4h. p.m. the sky was generally about one-half covered with cumuli, cirrostratus, and scud. The arc of a solar halo was visible for a short time at about 1h. 20m. p.m.
FRI.	Positive and tension moderate throughout the day.	} See General Remarks.	Cloudless till 2h. a.m.; from that time till 6h. p.m. the greater part of the sky was always covered with cumuli, cirrostratus, and scud. Cloudless during the remainder of the day.
SAT.	Nothing was shown from 2h. till 6h. a.m. Negative and tension moderate at 9h. 20m. p.m. At other times it was positive with moderate tension.	} Rain falling.	About seven-tenths of the sky were generally covered with cumuli, cirrostratus, and scud throughout the day. It was overcast from about 5h. p.m. till midnight. Rain was falling from 9h. p.m. till midnight. A solar halo was visible at about 5h. 30m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. It has been under repair throughout the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 52.3; and the mean reading at 7h. 30m. P.M., was 58.0; the mean readings at the Royal Observatory for the same times were 52.5 and 56.5 respectively.

† The mean direction of the wind for the week is S.S.W.

# A TABLE OF

## Births and Deaths registered in London,

*During the Week ending Saturday, May 22nd, 1847.*

Average of first 7 years	921	889	855	842	835	858	867

The mortality of Waudsworth and Clapham, and that of Lewisham and sub-district of Hampstead, are included in the above table throughout the 8 years, though the former was not added to the Weekly Metropolitan Returns till 1844, nor the latter till 1847.

1	2	3	4
Ages	Deaths registered last week in London	Deaths which would have been registered if the rate of mortality had been the same as in Dorsetshire	Excess of Mortality in London during the week
0—15	410	279	131
15—35	114	138	—24
35—55	147	103	44
55 and upwards	240	164	76
All Ages	911	684	227

The above Table (2nd Col.) shows the number of persons who died in London during the week ending May 15th, 1847, under 15 years of age; 15 and under 35; 35 and under 55; 55 years of age and upwards, respectively.

The third column is an approximation to the number of deaths which would have happened during the week at the same ages, if the rate of mortality at the several quinquennial and decennial ages of life had been the same as prevailed among the whole population of Dorsetshire in the 7 years 1838-44.

The fourth column exhibits the number of persons who died during the week in London, but who would not have died if the rate of mortality had not exceeded that in Dorsetshire. The mortality of males between the ages of 45—55 years, in Dorsetshire, was at the rate of 14 in 1000 annually: the mortality in the same years (1838—1844), and at the same ages in London, was 27 in 1000; and at all ages, the mortality in Dorsetshire is 20; in London, 27 in 1000. The population of London, it is believed, is as well provided with food and clothing as the people in Dorsetshire; the excess of sickness and mortality in London must, therefore, be ascribed to malignant causes, the greater part of which undoubtedly admit of removal, or mitigation.

## SCURVY.

In the Quarterly Report which appeared in *February* last, apprehension was expressed that scurvy may break out among the people of this country. The necessity of precautionary measures was also adverted to in the following terms:—

“Dr. Baly, the physician to the Milbank Penitentiary, showed some time ago that scurvy was very prevalent in prisons from the dietaries of which potatoes were excluded, and did not exist where potatoes were used. The potato contains a small quantity of a vegetable acid, in combination with potash (bitartrate of potash, or cream of tartar). It is certain that scurvy, which was formerly common, has almost disappeared since the potato entered largely into the food of the population. If, now that the potato has grown scarce, this disease characterised among other symptoms by swollen bleeding gums again become prevalent, its simple prophylactics should be had recourse to.”

Although no deaths have yet been directly ascribed to scurvy in London, the disease, it is now ascertained, has appeared in many parts of the country. Several cases too have shewn themselves at the London Hospitals. Under these circumstances the following practical suggestions of Dr. Baly deserve the attention of the public. The poorer classes particularly should be properly informed on the subject. Where green vegetables and lime juice cannot be procured, a weak acidulated drink of cream of tartar and sugar may be tried; for it is the presence of the former salt, which probably renders the potato antiscorbutic.

“It cannot be doubted,” says Dr. Baly, “that the prevalence of Scurvy at the present time amongst the poor in Scotland, some parts of England, and even in London, is owing to the scarcity of vegetables, and especially of that kind of vegetable which alone the poor can usually obtain in quantity adequate for the preservation of health, namely, potatoes. The want of potatoes, as I have shown

“elsewhere, was the cause of the appearance of scurvy in many prisons and other public institutions at former periods. The potato being now so scarce, other articles of diet have been substituted for it. The article substituted has been for the most part some cheap kind of grain, as Indian corn, rice, oats, barley, peas, or beans. But the farinaceous food made from grain has no anti-scorbutic property. It has been necessary, therefore, to supply this defect by flavouring the farinaceous food with lime juice, the great prophylactic against scurvy in the navy; or to combine with the food some fresh vegetable, such as turnips (*Sveeden*), carrots, cabbages, onions, cress, and mustard. Both these measures, when tried, have been successful.

“A small quantity of lime juice would be sufficient to give anti-scorbutic properties to the rice, meal, or Indian corn, food used by the poor, or an acidulous drink might be made with it. In either way, it would be an efficacious, and, I think, an economical preventive of the disease. Its use might be introduced with great advantage into workhouses and amongst the out-door poor.

“The fresh vegetables I have named could seldom be procured by the poor themselves in sufficient quantity, but sometimes, perhaps, they might use plants which grow wild, such as the common water-cress and scurvy-grass. These are powerful anti-scorbutics, and most edible green vegetables, especially those which have an acid taste, possess the same properties.

“The important point, however, seems to be, that the poor and the Guardians of the poor should be instructed that farinaceous foods, made of grain or meal of any kind, will not alone serve as substitutes for potatoes; that either some green vegetable or succulent root must be eaten with them; or the deficient antiscorbutic property supplied with lime juice.”

# EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 20.

(The tabular abstract on the first page is for the week ending Saturday, May 22nd. The following selection of cases is made from the returns for the week ending May 15th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Hanging and Suffocation:—	duration
House painter, 33, fall from and with a ladder raised against a house, while working on it, from the ladder slipping.....	*	M. 47, cutting his throat with a razor, in temporary insanity.....	a few minutes	Stableman, about 62, suffocation by hanging—state of mind unknown.	
M. 55 (post mort.—no inquest), abscess in dorsal and lumbar muscles.....	2 months	Drowning:—		Barrister at law, 55, suicide by hanging, being of unsound mind.	
had a fall on his back.....	3 months ago	M. 40, found drowned—but how he came into the water no evidence.		M. 12 wks., asphyxia from slipping off the pillow upon his face, having been placed in bed to sleep.	
M. 51, mortal fractures and bruises, caused by a fall from a ladder placed against a chimney while it was on fire.....	*	M. apparently 55, found dead (probably in the water 4 days).		Burns:—	
M. 2, accidental death by a fall from a chair, and concussion of the brain.....	9 days	M. probably 60, found drowned (a few hours in the water).		F. 15, burns by her clothes taking fire accidentally.....	19 days
Son of a bricklayer, 4, accidental death by a fall and blow on the head.....	11 weeks	M. 18, drowning.		Poison:—	
Son of a baker, 2, accidental death by a fall from a chair, and blow on the head.....	*	M. 13, drowned by falling out of a boat into the River Thames, at Cox's quay, whilst at play (under water 3 minutes).		M. 40, taking essential oil of almonds, in temporary insanity.	
Carman, 30, head accidentally crushed by the wheel of a waggon.....	*	F. 28, drowned in the River Thames by falling off a lighter.		F. 1 (no inquest), inflammation of the throat, from accidentally taking hartshorn spirits.....	3 days
M. 46, fractured ribs and collar bone, and other internal injuries, from being run over in Penchurch Street by a cart, the horse having run away.....	died in a few minutes	F. 34, died from the effects of immersion in the River Thames—but no evidence of the cause.		Neglect:—	
M. 43 (no inquest), meningitis from a blow on the head.....	some years ago	F. about 36, found drowned—but no evidence how.		F. newly born, found dead in Carlisle Street, Lambeth—wilfully neglected at birth—umbilical cord cut—great loss of blood—wilful murder against some person or persons unknown.	
M. 83 (no inquest), fractured neck of thigh bone—sloughing of parts.....	3 months	M. 35, drowning—but no evidence how he came into the water (under water 8 hours).			
F. 22, injury to the spine—but no evidence how caused.....	*	Widow of a weaver, 58, drowned herself in a bath of water, in a temporary state of insanity.			

## THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	Fever H. (continued):—	duration	St. Thomas' H.:—	duration
M. 42, phthisis pulmonalis—ulceration of pharynx and larynx.....	*	F. 47, { pneumonia.....	2 weeks	M. 54, { disease of liver and aortic valves....	*
M. 35, strangulated hernia.....	*	(p.m.) { tubercles in the lungs.....	*	(p.m.) { hæmorrhage.....	9 months
M. 22, insanity—phthisis pulmonalis.....	*	in hospital 5 days—from Lambeth.		ascites.....	*
F. 22, malignant disease of the leg.....	*	King's College H.:—		M. 24, { fungoid disease of the thigh bone ..	*
F. 65, dropsy.....	*	M. 36 (post mort.), phthisis.....	some months	(p.m.) { tabes.....	1 year
Westminster H.:—		F. 24 (post mort.), peritonitis.....	3 days	M. 36, rheumatism.....	5 weeks
M. 35, cirrhosis—ascites.....	—months	St. Bartholomew's H.:—		Guy's H.:—	
Charing Cross H.:—No deaths registered.		M. 64, dropsy and pneumonia.....	*	M. 46, fever.....	15 days
Middlesex H.:—No deaths registered.		M. 54, phthisis.....	*	M. 51, { varix of right leg.....	10 days
Unioersity College H.:—No deaths registered.		M. 18, disease of the joints (hip and wrist) ..	*	(post mort.) { irritative fever.....	3 days
Small Poz H.:—No deaths registered.		M. 7, pneumonia.....	*	F. 40, renal dropsy.....	*
Fever H.:—		M. 35, phthisis.....	*	F. 31, tumour of the uterus, causing retroversion.....	12 days
F. 39, { fever.....	17 days	M. 26, lumbar abscess.....	*	F. 40, { phlegmonous inflammation of stomach	7 days
(p.m.) { two very small ulcers in ilium. In hospital 10 days—from Kensington.	*	M. 26, delirium tremens.....	*	acute peritonitis.....	5 days
F. 35, { phthisis.....	*	F. 65, general debility.....	*		
(p.m.) { convalescent from fever with erysipelas 4 weeks from Lambeth.	*	F. 39, fever.....	*	Dreadnought H.:—	
		F. 64, pneumonia.....	*	M. 26, { hypertrophy and dilatation ....	3 years
		London H.:—		(post mort.) { dropsy.....	2 months
		F. 34, chronic bronchitis.....	1 year	M. 26, { typhus.....	18 days
				(post mort.) { inflammation of Peyer's glands.	

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.

Small Pox:—	duration	Typhus, &c. (continued):—	duration	Diabetes:—	duration
F. 1, small pox (never vaccinated) no medical attendant.....	*	F. 2 mon., fever.....	2 days	M. 35, { diabetes.....	*
F. 1, small pox, first attack (never vaccinated) ..	2 days	M. 46, typhus.....	21 days	{ phthisis.....	2 years
M. 10, confluent small pox (without previous vaccination).....	7 days	M. 13, typhus.....	*	F. 62, diabetes—consumption.....	*
M. 8 mon., confluent small pox (never vaccinated).....	2 weeks	M. 2, brain fever.....	*	Stone:—No deaths registered from this cause.	
F. 1, variola, confluent, first attack—(never vaccinated).....	9 days	M. 23, fever—parotitis.....	3 weeks	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
M. 26 days, small pox (not vaccinated).....	*	M. 15, fever.....	5 days	F. 16, puerperal fever.....	9 days after childbirth
M. 4, variola (vaccinated).....	*	F. 30, brain fever.....	8 days	Query—Did fever commence or terminate on the ninth day after childbirth?	
M. 4, variola (not vaccinated).....	3 weeks	M. 22, fever.....	1 week	F. 23, childbirth.....	6 days
F. 7 mon., small pox (not vaccinated).....	7 days	F. 12, fever—cerebral effusion.....	*	F. 22, puerperal peritonitis....	14 days after childbirth
M. 7, { small pox.....	7 days	M. 32, typhus.....	*	F. 22, { childbirth.....	7 days
M. 3 weeks, small pox.....	6 days	M. 43, typhus.....	*	peritonitis.....	4 days
Chicken Pox:—		M. 48, typhus.....	*	F. 23, puerperal peritonitis....	2 days
F. 7 mon., varicella.....	4 days	F. 20, fever.....	*	F. 33 (inquest), natural death from hæmorrhage preceding labour.....	*
F. about 8 mon., debility of constitution—chicken pox—convulsions.....	*	F. 73, gastric fever.....	*	F. 26, { miscarriage.....	3 months
Typhus, &c.:—		F. 83, febris.....	*	(p.m.) { erysipelas.....	4 weeks
M. 60, fever—meningitis.....	5 days	M. 6, { fever.....	20 days	of typhoid character.	
M. 17, febris.....	14 days	{ pneumonia.....	7 days	F. 35 (inquest), natural death in childbed....	4 days
F. 70, fever.....	3 weeks	F. 39, fever.....	14 days	F. 27, puerperal peritonitis....	4 days
F. 43, fever.....	*	See Hospital Returns.		F. 35, puerperal fever.....	6 days
F. 60, fever—diarrhoea.....	6 weeks	Ague:—		F. 42, childbirth—puerperal fever.....	5 days
M. 25, typhus.....	*	M. 68, intermittent fever.....	6 weeks	Delirium Tremens:—	
F. 64, { fever.....	3 weeks	F. 86, quotidian ague.....	*	M. 33, delirium tremens.....	*
{ chronic inflammation of the brain.....	2 months	M. 10, { intermittent fever.....	4 months	See Return of St. Bartholomew's Hospital.	
F. 39, fever—exhaustion.....	3 months	remittent fever.....	3 weeks	Gangrene and Delirium Tremens:—	
F. 43, synochus.....	10 days	Infantile Fever:—		M. 39, { gangrenous inflammation of scrotum, 14 days	*
F. 29, typhus—effusion into lateral ventricles, 5 weeks	5 weeks	F. 10, { infantile fever.....	4 weeks	{ delirium tremens.....	8 days
M. 3, fever.....	1 week	{ convulsions.....	12 hours	Intemperance; Privation:—	
F. 64, typhus.....	8 days	F. 1, infantile remittent fever, and effusion on the brain.....	*	No deaths classed in present abstract under either of these heads.	
F. 3, fever.....	1 month	Syphilis:—		Want of Breast-milk:—	
M. 35, typhus.....	24 days	F. 27, { syphilis—secondary.....	2 years	F. 6 mon., { inanition from want of breast-milk, 3 months	*
F. 69, fever.....	10 days	{ inanition.....	3 days	{ purulent ophthalmia.....	3 weeks
M. 4, continued fever—typhus.....	10 days	F. 2 mon., syphilis.....	7 weeks	{ tabes mesenterica.....	3 weeks
M. 68, typhus.....	10 days	Hæmorrhage:—		{ without breastmilk.....	from birth
F. 4, fever—gastric enteritis.....	10 days	F. 81, { nasal hæmorrhage.....	3 weeks	F. 3 mon., gradual wasting from improper nutrition.....	from birth
F. 20, typhus.....	16 days	{ cerebral congestion.....	3 days	Miscellaneous Causes:—	
M. 3 months, fever—convulsions.....	10 days	Malformations:—		M. 16, { disease of the knee-joint.....	*
M. 8, { pleuritis.....	14 days	F. 5 weeks (post mort.), perforate foramen ovale—convulsions.		{ amputation of the thigh.....	6 days
F. 2, synochus.....	14 days	F. 6 days (post mort.), malformation of stomach and intestines—stercoraceous vomiting.		F. 79, natural decay—cirrhosis.....	18 days
F. 6, typhus.....	14 days	F. 3, { morbus cereuleus.....	from birth.	{ chronic hepatitis.....	*
F. 20, typhus.....	*	convulsions.....	a few minutes	{ general debility.....	*
M. 59, typhus.....	1 week	Hernia:—		{ severe fright.....	4 months
F. 35, typhus.....	*	See Return of St. George's Hospital.		{ ovarian dropsy, unilocular cyst (twice tapped).....	3½ years
M. 36, typhus—effusion on the brain.....	*			{ bronchocele.....	*

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 25; apoplexy, 2; disease of heart, 5; childbirth, 2; other specified causes, 4; causes not specified, 9.—TOTAL, 47 cases.

THE NUMBER OF CASES IN WHICH IT IS REPORTED THAT A POST MORTEM EXAMINATION WAS MADE, IS 35.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 22nd May, 1847.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 O'Clock, reduced to (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			WIND							Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																			
			Dry			Dew Point	Highest in the sun, as shown by 2 self-register- ing Thermometer	Lowest on the grass, as shown by a self-register- ing Thermometer	In the Water of the Thaons at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12 Diffs.	Greatest	Least	Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 45 years	General Direction		Pressure in lbs. on the square foot			Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	In the morning nothing was shown. Positive and tension moderate in the afternoon.	See General Remarks.	During the morning the sky was generally overcast. Cumuli, cumulostrati and scud were the most prevailing clouds during the afternoon. There were several squalls of rain during the day.
MON.	Positive and generally weak throughout the day.	See General Remarks.	The sky was generally overcast till 10h. a.m.; about one-half covered with cirrostratus and large masses of scud from this time till 6h. p.m., and the greater part covered during the remainder of the day. The arc of a solar halo, the radius of which was 23°, was visible at about 11h. 15m. a.m.
TUES.	Positive and weak till noon. Tension moderate during the remainder of the day.	See General Remarks.	Mostly overcast with thin cirrostratus and scud throughout the day. Rain was falling from about 5h. p.m. till 9h. p.m.
WED.	Nothing was shown till 11h. a.m. Positive and tension moderately strong during the remainder of the day.	See General Remarks.	The greater part of the sky was covered with cirrostratus, cumuli, and masses of scud throughout the day, except shortly before midnight, when it became cloudless.
THURS.	Positive but very weak till 1h. p.m. Tension strong during the rest of the day.	See General Remarks.	Detached cumuli, cirrostratus and masses of scud generally covered the greater part of the sky till 2h. p.m. During the remainder of the day it was mostly cloudless. Rain was falling for a short time at about 11h. a.m.
FRID.	Positive and tension generally strong from 7h. a.m. till 6h. p.m. Positive but weak at other times.	See General Remarks.	The greater part of the sky was clear throughout the day. The prevailing clouds were detached cumuli and cirrostratus.
SAT.	Positive and generally weak throughout the day.	See General Remarks.	The sky was overcast till 6h. a.m., and from 9h. p.m. till midnight. Generally clear between these times.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. It has been under repair throughout the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 53.8; and the mean reading at 7h. 30m. P.M., was 60.1; the mean readings at the Royal Observatory for the same times were 53.1 and 59.3 respectively.

† The mean direction of the wind for the week is S.W.

# A TABLE OF

## Births and Deaths registered in London,

During the Week ending Saturday, May 29th, 1847.

ANNUAL SERIES VIII.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. [No. 22

DEATHS from Purpura or from Scurvy in LONDON;—

YEARS	Quarters of 13 weeks each, ending in				Total in the Year
	March	June	Sept.	Dec.	
1842	3	5	4	4	16
1843	2	1	6	4	13
1844	5	3	7	6	21
1845	2	4	11	8	25
1846	5	9	9	5	28
1847	16	17 in 9 weeks			

Cases of Purpura returned in the week ending May 29th, 1847.—

A boy, age 1 year 9 months—purpura, 5 weeks; convulsions, 1 day—in Bermondsey (certified).

A man, age 47, in Bartholomew's Hospital—purpura, with pneumonia; disease of the kidneys and heart (certified).

A man, age 29, in Bartholomew's Hospital—perforation, 13 days; pneumonia, 16 days (certified).

In one of the ablest and most recent articles on scurvy (Library of Medicine, vol. 5, page 93), Dr. Budd contends, that scurvy and purpura are "essentially different" diseases: "they arise," he says, "from different causes; they differ in the circumstances and mode of attack; and they require different treatment. We have already stated, that the essential cause of scurvy is prolonged abstinence from vegetable juices, and that the approach of the scorbutic habit is very gradual: purpura, on the contrary, often appears suddenly, and in many cases cannot be attributed to any peculiarity in diet. Scurvy, when occurring on land, is, from circumstances we have before mentioned, met with almost exclusively at the end of winter, or in the early part of the spring; purpura, on the other hand, is most common in summer and autumn. The livid and spongy state of the gums, which is pathognomonic of scurvy, and which, as well as the sallow and dusky hue of the skin, is a constant symptom of that disease, is not observed in purpura. Lastly, in scurvy, bleeding always does harm, and the disease is speedily cured by the use of succulent vegetables and fruits; while, in purpura, the abstraction of blood is often followed by relief, and the antiscorbutic juices are rarely, if ever, productive of much benefit."

Cases occur, however, in which it is by no means easy to separate the symptoms of scurvy from those of purpura. Dr. Laycock has recently recorded two cases (Medical Gazette, April 2nd) treated by him in York. He contends that, "the two diseases are allied," and are, in fact, "only varieties of the same disease;" citing in support of this view the increase of cases referred to purpura in the London Tables. This too, was the opinion of Willan, who considered purpura "under all the forms described, as pertaining to the scurvy, though it is not always attended with sponging of the gums, and a discharge of blood from them, according to the definition of Scorbntus in Nosology." (Willan on Cutan. Dis. Vol. iii. p. 453.) The attention of medical men who have patients under their care, will, it is hoped, be directed to the investigation of the varieties of the symptoms, as well as the causes, of purpura, for it is a matter of great practical importance to decide the litigated question, whether it is a variety of scurvy, or a distinct disease, which can neither be prevented nor cured by the same means. In the nine weeks of the present quarter, 17 cases of purpura have already been returned. Scurvy, as distinguished from purpura, has hitherto been so unusual a cause of death, that though given in the Nosology (17 a scurvy, 17 b purpura), no separate heading was retained for it in the Tabular Abstracts; and the few cases mentioned were referred to the same number (No. 17) as purpura. In the March quarter, 14 cases were returned as purpura, 2 as scurvy; and a few cases of scurvy were probably scattered over the previous years.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 21.

(The tabular abstract on the first page is for the week ending Saturday, May 29th. The following selection of cases is made from the returns for the week ending May 22nd.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued):—	duration
In London Hospital, carpenter, 49, (post mort.) accidental from a fall down the carcass of a house—fractured leg and inflammation. . . . .	18 days	Labourer, 52, injuries to the brain by falling down a flight of steps, and also by falling in the public street accidentally . . . . .	12 days	F. 2, crushing of the head by a gravel-cart wheel, when at play in the road—having just escaped from the care of the mother. . . . .	instant
In London Hospital, shipwright, 48, accidental by a fall from a scaffold into the hold of a ship on his head, and erysipelas caused thereby . . . . .	14 days	In London Hospital, glazier, 64 (post mort.), kick on abdomen, and rupture of bladder—manslaughter against Mary Burns . . . . .	"	In London Hospital, railway guard, 25 (post mort.), accidentally jammed in the hand by the machinery of a railway train, and tetanus caused thereby . . . . .	15 days
In London Hospital, labourer, 28 (post mort.), accidentally forced off his legs, and caused to fall on his legs, by a rope used in shifting a ship from a dock, in a gale of wind . . . . .	1 day	Moulder, 29, accidental death by the fall of a mould, which crushed his head and body. . . . .	instant	In London Hospital, tidewater, 53, accidentally crushed by a crane in his hand, at the London Docks . . . . .	3 weeks
In London Hospital, stividor, 45, accidental by a fall down a ship's hold, causing fracture of the skull . . . . .	3 days	In Charing Cross Hospital, son of a printer, 6, (post mort.) shock of the system from a blow on the forehead from a brewer's board, which was blown from the "Two Spies" public house, Catherine Street, Strand, during high wind. . . . .	15 days	In London Hospital, labourer, 31, effusion of blood from violence—but how caused no satisfactory evidence hath appeared . . . . .	"
F. cook, 45, injury of the brain from falling down stairs, while descending in the dark . . . . .	5 hours	In London Hospital, son of a draper, 11, accidentally run over by an omnibus, causing rupture of pelvis and other contusions. . . . .	1 day	F. 74 (no inquest), disease of hip from injury; and infirmities of age . . . . .	"
Shipwright, 42, accidental death by a fall, and by a piece of timber falling on his head . . . . .	"			In Middlesex Hospital, bricklayer's labourer, 55, injuries . . . . .	"

(An imperfect return—how were the injuries caused?)

# RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued).—

Wounds:—	duration	Hanging and Suffocation (continued):—	duration	Burns and Scalds:—	duration
M. 29 (no inquest), punctured and poisoned wound—jaundice and abscesses.....	1 month	Convict, formerly a plasterer, 24, hanged himself with a handkerchief and piece of rope to the gaspipe in his cell, when in separate confinement—found dead with his feet on the ground, supposed to have been hanging about 1½ hour—temporary insanity.		In London Hospital, daughter of a bricklayer, 4, accidental from burns, from clothes taking fire.....	5 days
M. 40, cut his throat in a temporary state of insanity.....	instant	Flax dresser, 37, suicide by banging himself to a beam, being in a state of mental derangement.		In London Hospital, daughter of a cooper, 4, accidental from burns from the clothes taking fire (at Poplar).....	1 day
<b>Drowning:—</b>		Wire drawer, 42, suicide by banging himself to the rafter of a privy, being of unsound mind.		Widow of a master mariner, 73, burns by her clothes igniting accidentally.....	25 days
Daughter of a dyer, 16, found struggling in the Regent's Canal—died apparently from drowning—but bow she came into the water no evidence to show.		Dresser of castings, 41, accidentally choked by a piece of beef passing into the trachea, having been seized with a fit of epilepsy..	20 mins.	In London Hospital, daughter of a single woman, 1, accidental from scalds.....	*
<b>Hanging and Suffocation:—</b>					
Baker, 22, hanged and suffocated himself, while in an unsound state of mind.					

## FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 27; apoplexy, 7; disease of heart, 1; childbirth, 1; intemperance, 1; specified causes, 12; other causes not specified, 7.—TOTAL, 56 cases.

THE NUMBER OF CASES IN WHICH IT WAS RECORDED THAT A POST MORTEM EXAMINATION WAS MADE, IS 34.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 29th May, 1847.

Day.	Phase of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.	See General Remarks.	The sky was generally clear till about 10h. p.m., when it became overcast, and continued so during the remainder of the day.
MON.	Positive and tension strong till 4h. a.m., at 3h. 2m. p.m., and at 7h. 20m. p.m. Positive but very weak at other times.	See General Remarks.	Generally overcast with cirrostratus and scud throughout the day. Slight rain was falling occasionally from 7h. p.m. till midnight.
TUES.	Positive but generally weak throughout the day.	See General Remarks.	The greater part of the sky was clear till 6h. a.m.: about one-half covered with cumuli and scud from this time till 3h. p.m.; then overcast till 9h. p.m., and cloudless during the remainder of the day.
WED.	Positive and tension very strong from 7h. a.m. till midnight.	See General Remarks.	Cloudless throughout the day.
THURS.	Positive and tension very strong throughout the day.	See General Remarks.	About one-third of the sky was covered with cumuli and light clouds between 9h. a.m. and 4h. p.m. Generally cloudless at other times.
FRID.	Positive and tension moderate throughout the day.	See General Remarks.	One-fifth of the sky was generally covered with cumuli, fleecy clouds, and scud, throughout the day.
SAT.	Positive and tension very strong from 3h. 50m. a.m. till 4h. a.m. Positive and tension generally strong from this time till midnight.	Rain falling heavily. See General Remarks.	The sky was overcast till 2h. p.m. and occasionally cloudless during the remainder of the day. Thunder was heard occasionally in the W.N.W., from about 2h. a.m. till 4h. a.m. There were also flashes of sheet lightning, almost incessantly. Rain fell heavily from 3h. 50m. a.m. till 4h. 5m. a.m. Slight rain was also falling occasionally from this time till 9h. a.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. The anemometer has been in the hands of the instrument-maker for repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 57.3; and the mean reading at 7h. 30m. P.M., was 65.4; the mean readings at the Royal Observatory for the same times were 58.3 and 64.0 respectively.

† The mean direction of the wind for the week is S.S.W.

The highest and lowest readings of thermometers on Sunday have been taken from the self-registering maximum and minimum instruments, and the simple arithmetical mean of the numbers thus found has been adopted as the average temperature of the day.

The weather during this week has been very remarkable, both on account of the high temperatures and the dryness of the atmosphere, and particularly so on Sunday, May 23, and Friday, May 28. On the former of these days the highest reading of the thermometer in air was 83°.8, and on the latter day it was 86°.8; on the same days the highest readings at Dartmouth Terrace, Lewisham, the residence of Mr. Glaisher, were 86°.8 and 88°.2 respectively. These readings are, as far as Mr. Glaisher can ascertain, without parallel on record, as occurring in the month of May. The hygrometrical state of the air on both days was also remarkable for its dryness, but more particularly on the 28th day; on this day, at 3h. 20m. p.m., the temperature of the air was 85°.3, and that of the dew point was 56°.6; at the same time, at Mr. Glaisher's residence, these elements were 87°.8 and 56°.2 respectively, the temperature of the air being 31°.6 above that of dew-point temperature. At this time the degree of humidity was about 0.4, that of saturation being 1. The weight of vapour in a cubic foot of air was 5.5 grains, and it would have required a quantity exceeding 7 grains additional, to have saturated the same mass of air.

# Births and Deaths registered in London,

During the Week ending Saturday, June 5th, 1847.

DEATHS from Purpura or from Scurry in LONDON;—

YEARS	Quarters of 13 weeks each, ending in				Total in the Year
	March	June	Sept.	Dec.	
1842	3	5	4	4	16
1843	2	1	6	4	13
1844	5	3	7	6	21
1845	2	4	11	8	25
1846	5	9	9	5	28
1847	16	20 in 10 weeks			

ERRATUM.—In the notes appended to the table of purpura, last week, for perforation, read purpura.

DEATHS registered in LONDON, in seven corresponding weeks of eight years:—

No. of week.	17	18	19	20	21	22	23	Average of 7 weeks
1840	882	859	882	785	824	814	848	842
1841	935	818	789	762	861	791	854	830
1842	808	781	798	830	858	785	872	819
1843	923	904	908	896	884	900	873	898
1844	890	887	822	872	886	895	911	880
1845	916	895	841	847	822	917	851	870
1846	868	843	853	850	872	847	844	854
Average of 7 yrs	889	855	842	833	838	850	865	856
1847	981	983	987	978	911	960	786	941

The mortality of Wandsworth and Clapham, and that of Lewisham and sub-district of Hampstead, are included in the above table throughout the 8 years, though the former was not added to the Weekly Metropolitan Returns till 1844, nor the latter till 1847.

1	2	3	4
Specified Ages	Deaths registered last week in London	Deaths which would have been registered if the rate of mortality had been the same as in Dorsetshire 1838-44	Excess of Mortality in London during the week
0-15	332	279	53
15-35	124	138	-14
35-55	154	103	51
55 and upwards	175	164	11
All Ages	786	684	102

The above Table (2nd Col.) shews the number of persons who died in London during the week ending May 15th, 1847, under 15 years of age; 15 and under 35; 35 and under 55; 55 years of age and upwards, respectively.

The third column is an approximation to the number of deaths which would have happened during the week at the same ages, if the rate of mortality at the several quinquennial and decennial ages of life had been the same as prevailed among the whole population of Dorsetshire in the 7 years 1838-44.

The fourth column exhibits the number of persons who died during the week in London, but who would not have died if the rate of mortality had not exceeded that in Dorsetshire. The mortality of males between the ages of 45-55 years, in Dorsetshire, was at the rate of 14 in 1000 annually; the mortality in the same years (1838-1844), and at the same ages in London, was 27 in 1000; and at all ages, the mortality in Dorsetshire is 20; in London, 27 in 1000. The population of London, it is believed, is as well provided with food and clothing as the people in Dorsetshire; the excess of sickness and mortality in London must, therefore, be ascribed to malignant causes, the greater part of which undoubtedly admit of removal, or mitigation.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 22.

(The tabular abstract on the first page is for the week ending Saturday, June 5th. The following selection of cases is made from the returns for the week ending May 29th)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning (continued):—	duration	Burns and Scalds:—	duration
In St. Bartholomew's Hospital, bricklayer, 83, wound of his head, and fracture of one of his ribs, by falling into a sewer, in Shoe Lane, Holborn	3 weeks	Sailor about 21, apparently from drowning—body in a bad state of decomposition.		In St. Bartholomew's Hospital, daughter of a servant, deceased, 12, burnt by her hedgown taking fire, whilst lighting a fire (at Clerkenwell Green)	16 hours
F. 3 (no inquest), injury of the brain by a fall from a chair	7 days	M. 16, accidentally drowned, while bathing.		Daughter of a copper brazier, 3 (no inquest), extensive burn, from having caught fire during the absence of the mother	14 days
Carman, 45, accidentally killed by being run over by a cart, from which he fell when driving	*	M. 20, accidentally drowned, while bathing.		In St. Bartholomew's Hospital, widow of a tailor, 55, scalded by the upsetting of a saucepan of boiling water (at Graham Street, City Road)	6 days
In St. Bartholomew's Hospital, widow of a baker, 71, exhaustion caused by a sloughing wound at the back of her left leg, from a person stepping on her heel at the Hackney Road	about 2 months	Mariner, 28, accidentally drowned from a dummy.		In St. Bartholomew's Hospital, daughter of a drayman, 4, scalded by the upsetting of a saucepan, containing boiling water (at Half Moon Alley, Whitecross Street)	11 days
M. 66, { injury of the spine . . . . . 30 years (no inquest) { asthma . . . . . 1 year { dropsy . . . . . 2 months		M. 27 (without occupation), drowned herself in a temporary state of insanity.			
Drowning:—		M. 48, accidentally drowned in a water-butt, by overbalancing himself (in the water 1 br.)		Poison:—	
Labourer about 40, supposed from drowning—no marks of violence.		Hanging and Suffocation:—		In Charing Cross Hospital, charwoman, 52 (post mort.), sulphuric acid—suicide—temporary insanity	2 days
Labourer about 22, found dead in the River Thames—supposed from drowning—no marks of violence.		Labourer, 70, hanged himself in a temporary state of insanity.		M. 49, poisoned himself with hydrocyanic acid, in a temporary state of insanity.	
M. a few minutes (unknown child), found in the River Thames.		M. 45, accidental death from choking, whilst eating potatoes	*	M. 50, poisoned himself by prussic acid, in a temporary state of mental derangement.	
		F. 10 won., found dead, having apparently slipped partly out of bed, and become suffocated.			

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:	duration
M. 62, { stone in the bladder.....	*
(post mort.) { lithotripsy.....	7 days
{ lacerations of urethra—infamed kidneys.....	

Westminster H.:—No deaths registered.

Charing Cross H.:	duration
M. 49, { general debility, following inebriety, and then privations.....	*
{ anasarca and erythema of the abdomen and lower extremities.....	
F. 63, { psoriasis—affection of the brain.....	several months
{ low fever.....	1 week

See Violent Deaths.

Middlesex H.:	duration
M. 47, { strangulated femoral hernia, with abscesses in the intestines.....	11 days
{ operation.....	3 weeks
M. 50, febris.....	14 days
F. 68, apoplexy—hemiplegia (left side).....	1 year
F. 44, cancer uteri.....	

University College H.:	duration
M. 31, phthisis pulmonum.....	*

Fever H.:	duration
M. 19, { fever.....	10 days
(post mort.) { in hospital 6 days—from Clapham.....	
{ fever.....	*
M. 40, { in hospital 36 hours—from St. George's, Southwark.....	17 days
M. 25, { in hospital 5 days—from Deptford.....	
F. 53, { fever.....	*
{ from St. Mary-le-bone.....	

Fever H. (continued):	duration
F. 15, { fever.....	12 days
(post mort.) { congestion of brain—no ulceration of ilium.....	
{ from Holborn—recently Ireland—in hospital 6 days.....	long standing
F. 32, { dysentery.....	
(post mort.) { ulceration of colon.....	
{ from Lambeth—from Ireland 2 weeks.....	
{ in hospital 6 days.....	
F. 20, { fever.....	14 days
(post mort.) { congestion of cerebrum—very trivial ulceration of ilium.....	*
{ from Fitzroy Square—in hospital 11 days.....	
M. 47, { fever.....	28 days
{ in hospital 3 weeks—from Clerkenwell.....	
F. 13, { fever.....	14 days
{ parotid bubo.....	4 days
{ in hospital 11 days—from Marylebone.....	
F. 65, { fever.....	5 days
(post mort.) { parotid bubo.....	long standing
{ pneumonia.....	
{ complete solidification of right lung—from St. Martin's.....	
F. 35, { fever.....	28 days
(post mort.) { phlebitis.....	3 days
{ effusion of pus into the joints.....	
{ no ulceration of ilium.....	
{ from St. Pancras.....	

Small Pox H.:	duration
M. 16, { smallpox (confluent, petechial).....	21 days
{ vaccinated, when young, at Eastbourne—two good cicatrices.....	

King's College H.:	duration
F. 18, { miscarriage.....	*
(post mort.) { peritonitis.....	4 days

St. Bartholomew's H.:	duration
M. 61 (inquest—post mort.), scrofulous apoplexy.....	3 days
M. 47, purpura, with pneumonia—disease of the kidneys and heart.....	*
M. 29, { purpura.....	13 days
{ pneumonia.....	10 days
M. 56, phthisis.....	*
M. 37, ulceration of the bowels.....	*
M. 44, disease of the bowels.....	*
F. 46, cancer of the uterus.....	*
F. 39, peritonitis, with abscess in the ovary, and disease of the kidneys.....	*

See Violent Deaths.

London H.:	duration
M. 58, morbus hepatis.....	*
M. 26, catarrhus.....	*
M. 26, diseased spine.....	*

St. Thomas' H.:	duration
F. 20, phthisis.....	*
M. 23, { morbus cordis.....	4 months
{ phthisis.....	
F. 37, ulcer of the left mammary region—exhaustion.....	*

Guy's H.:	duration
M. 3, gastro-enteritis.....	*
F. 3, ulcerated bowels—abscess of the liver.....	*
F. 26, diseased lungs—paralysis.....	*

Dreadnought H.:	duration
M. 36 (post mort.), necrosis of lower jaw.....	9 days
M. 35, { chronic bronchitis.....	4 months
(post mort.) { inflammation of the epiglottis.....	6 weeks
{ death from inanition.....	

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, ETC.

Small Pox:—	duration
M. 1, small pox.....	*
NOTE.—It should be stated in all cases whether vaccination had been performed successfully.	
F. 4 mon., small pox (never vaccinated).....	9 days
F. 10 mon., small pox.....	1 week
M. 2, variola.....	*
M. 8 mon., { variola, confluent (never vaccinated).....	12 days
{ cerebral congestion.....	24 hours
F. 17, { confluent small pox.....	8 days
{ vaccinated when an infant without effect.....	
M. 1, variola.....	*
F. 16 days, variola.....	*
M. 27, variola.....	21 days
M. 2, variola, confluent (not vaccinated).....	7 days

With reference to this case, the Registrar of Trinity sub-district, St. Mary, Newington, states that "they all occurred within a hundred yards of two places used as receptacles for night soil, where it undergoes the operations of drying and mixing, the latter being frequently carried on during the day."

M. 1, natural small pox.....	*
M. 9, natural small pox.....	*
M. 4, small pox (3 years after vaccination).....	*

See Small Pox Hospital Returns.

Typhus, &c.:	duration
F. 79, bilious fever.....	*
M. 65, fever.....	7 days

With reference to this case, the Registrar states that "the deceased was a gentleman of large property, who had left Ireland much excited by what he saw around him, and came to Craven-street, where he was taken ill with fever, within 7 days after his arrival. The brain was much affected from the first, and decomposition was fearfully rapid."

F. 31, febris.....	9 days
F. 18, { fever.....	4 days
{ diarrhoea.....	
F. 42, fever.....	42 days
F. 1, fever and subsequent exhaustion.....	10 days
M. 7, fever.....	1 week
F. 52, { fever.....	5 or 6 yrs.
{ chronic bronchitis.....	
M. 5, fever.....	*
M. 41, typhus.....	2 weeks
F. 59, febris.....	7 days
F. 62, typhus.....	11 days
M. 50, { fever—congestion of lungs.....	10 days
{ chronic bronchitis.....	
M. 38, common continued fever.....	10 days
{ typhus gravior.....	
M. 10, { produced by contagion from Irish paupers.....	

Typhus, &c. (continued):	duration
F. 18, synochus.....	21 days
F. 37, typhus.....	10 days
M. 35, typhus.....	*
F. 33, fever.....	14 days
F. 5, fever, with affection of the brain.....	5 days
M. 46, pneumonia after typhus.....	24 hours
F. 65, { fever.....	17 days
{ diarrhoea—collapse.....	9 days
M. 45, { erysipelas.....	5 weeks
{ typhus.....	3 weeks
M. 7, { dropsy.....	2 weeks
M. 3, fever.....	12 days
F. 57, typhus.....	10 days
M. 50, { typhus.....	10 days
{ pneumonia.....	
M. 78, synochus—age.....	*
M. 38, typhus.....	*
M. 81, synochus.....	*
F. 28, typhus.....	6 days
M. 77, typhus.....	16 days
F. 26, fever.....	2 months
F. 50, fever.....	4 days
F. 25, typhus gravior.....	14 days
M. 10, { fever.....	10 days
{ congestion of the brain.....	
F. 31, fever.....	9 days
F. 27, typhus mitior.....	20 days
M. 68, synochus.....	14 days
F. 3, fever—hydrocephalus.....	7 days
M. 10, { fever.....	4 days
{ congestion of brain and hemiplegia.....	

See Hospital Returns.

Intermittent Fever:—	duration
M. 40, { cirrhosis.....	long duration
{ hæmatemesis; hepatization of right lung.....	some years
at { pericarditis and effusion.....	8 or 10 months
Hampstead. { complicated intermittent fever, occurring during convalescence, caused by unwholesome house, and want of change of air.....	

Syphilis:—	duration
M. 1, secondary syphilis.....	3 months

Hæmorrhage:—	duration
M. 76 (ing.), natural death—rupture of a blood vessel of the thorax.....	instantly

Malformation:—	duration
M. 17 days (post mort.), imperforate rectum, relieved by operation—obstruction of sigmoid flexure of colon—inflammation.....	*
M. 3 days (post mort.), imperforate anus—obstruction in the bowels.....	from birth
F. 15 days, spina bifida.....	
M. 3 weeks, pharyngeal malformation.....	
M. 1 day, cyanosis.....	

Hernia:—	duration
F. 65, old umbilical hernia—operation.....	*
See Return of Middlesex Hospital.	

Diabetes:—No deaths registered from this cause.

Stone:—See Return of St. George's Hospital.

Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.

F. 26, { childbirth.....	4 days
{ peritonitis.....	4 days
F. 21, puerperal fever.....	5 days
F. 34, { childbirth.....	12 days
{ puerperal fever.....	*
F. 25, puerperal fever.....	*
F. 26, puerperal fever.....	7 days

See Return of King's College Hospital.

Disease of Heart and Childbirth:—	duration
F. 37, { diseased heart.....	*
{ childbirth.....	4 days

Delirium Tremens:—	duration
M. 48, delirium tremens.....	1 week

Diseased Liver and Delirium Trem.:—	duration
M. 41, { disease of the liver.....	many years
{ delirium tremens.....	6 days

Intemperance:—See Return of Charing Cross Hospital.

Privation:—In the Artillery sub-district of Whitechapel, F. 1, natural death, which may have been accelerated by want and privation.....

Want of Breast-milk:—M. under 1, inanition from absence of mother's milk..... 8 days

Purpura:—M. 1, { purpura..... 5 weeks

{ convulsions..... 1 day

See Return of St. Bartholomew's Hospital.

Cholera:—In Rochester-street, Westminster, a bricklayer, 72, cholera..... 17 hours

Miscellaneous Causes:—	duration
F. 35, { cirrhosis—ascites.....	several months
{ febris.....	7 days
F. 4 mon., { erythema.....	10 days
{ atrophy.....	14 days
M. 10 weeks, { erythema nascentium.....	7 weeks
{ bronchitis.....	4 weeks
M. 59, atrophy from over anxiety and application to business.....	*
F. 76, gallstones.....	*
M. 61, { jaundice.....	6 weeks
{ from cartilaginous deposit pressing on and obstructing gall ducts.....	

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 24; apoplexy, 3; ossification of valves of heart, 1; other disease of heart, 2; other specified causes, 8; "natural death," "visitation of God," "found dead," &c. 15.—TOTAL, 53 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION WAS MADE, is 38.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive but weak at each examination.	See General Remarks.	Cloudless during the morning. In the afternoon the sky was partially covered with cumuli and fleecy clouds.
MON.	Positive and weak till 9h. a.m. Tension generally strong from this time till midnight.		The sky was nearly covered with cumulostrati and scud from 3h. p.m. till 6h. p.m. Generally clear at other times throughout the day.
TUES.	Positive and tension moderate throughout the day.		Cloudless throughout the day.
WED.	Positive but very weak till 6h. a.m. Tension moderate during the remainder of the day.		With the exception of a few cumuli, which prevailed during the morning, it was cloudless throughout the day.
THURS.	Positive and tension generally strong throughout the day.		Cloudless till 6h. a.m.; from this time till 4h. p.m. the greater part of the sky was covered with thin cirrostratus and haze; then generally clear till 11h. p.m., and overcast at about midnight. A solar halo was visible at about 2h. p.m., whose radius was 23°.
FRI.	Positive but weak from 9h. a.m. till 2h. p.m. Nothing was shewn at any other times.		Overcast till 8h. p.m.; about one-third of the sky was then covered with detached cumuli and fleecy clouds till 4h. p.m.; nearly cloudless from this time till 8h. p.m., and overcast afterwards during the remainder of the day.
SAT.	Positive but very weak from 9h. a.m. till 2h. p.m. Nothing was shewn at any other times.		The sky was generally overcast throughout the day. There were a few breaks at about noon.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. It has been in the hands of the instrument-maker for repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.  
The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 56.3; and the mean reading at 7h. 30m. P.M., was 63.2; the mean readings at the Royal Observatory for the same times were 55.6 and 62.9 respectively.

† The mean direction of the wind for the week is N.N.E.

# Births and Deaths registered in London,

During the Week ending Saturday, June 12th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 23.

(The tabular abstract on the first page is for the week ending Saturday, June 12th. The following selection of cases is made from the returns for the week ending June 5th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued):—	duration
In St. George's Hospital, hawk-boy, son of a plasterer, 14 ( <i>post mort.</i> ), fracture of the skull and laceration of the brain—fell from a scaffold when at work at a house at Ealing Park .....	7 days	In St. George's Hospital, carter, 32 ( <i>post mort.</i> ), rupture of the urethra and fracture of the pelvis—jammed against the wall, and struck by the wheel of a cart drawn by one horse, when endeavouring to stop the horse, which suddenly started (at Kensington) .....	6 days	M. 2, accidentally run over by a waggon, and killed on the spot.	
In St. George's Hospital, F. market garden labourer, 35 ( <i>post mort.</i> ), fractured spine—fell when descending a ladder from a loft at Fulham .....	80 days	Coach wheel maker and cabriolet driver, 46, ( <i>post mort.</i> )—mortification of scrotum and penis, from infiltration of urine, after fracture of right leg—fell when getting from the box of a hackney cabriolet, the horse having run away in Rochester Row (mortification not supposed to result from fracture) .....	8 weeks	In St. George's Hospital, boatman, 38 ( <i>post mort.</i> ), rupture of the small intestine from a kick in the belly, in a fight at Isleworth—manslaughter against Edward Thomas ...	3 days
M. 62 ( <i>no inquest</i> ), rupture of the bladder by a fall .....	2 days	Labourer, 44 ( <i>post mort.</i> ), erysipelas, following wound of the head and concussion—knocked down when standing by his donkey and cart in Holborn, a brougham carriage having struck the wheel of the cart .....	10 days	Wounds:—	
In Westminster Hospital, F. 75 ( <i>no inquest</i> ), fracture of olecranon—gangrene—erysipelas .....	*	In Charing Cross Hospital, post boy, 31 ( <i>post mort.</i> ), fractured skull and concussion of the brain, by falling from a horse in Regent Street .....	22 hours	M. (of no occupation—formerly a servant), 46, cutting his throat with a razor, in temporary insanity, supposed from pecuniary losses. <i>instant</i>	
Query—How was the fracture caused?				Surgical instrument maker, 31, cutting his throat with a razor (in temporary insanity, from acute pain) .....	instant
In Westminster Hospital, labourer, 35, shock of system, compound fracture and amputation of both legs—his legs crushed by a log of mahogany, which slipped from a truck propelled by deceased and others, at Messrs. Cosser's Wharf, Peckham's Acre .....	3 days			F. newborn, found dead in a public privy in Dacre Street, with the head severed, and the bones tied up in a bundle, separate—the body far advanced in decomposition—no evidence whether born alive.	
				M. 32, shot himself in the head with a pistol, in a state of temporary derangement ...	*
				Harness maker, 30, suicide by cutting his throat with a razor (being of unsound mind) 30 hours	

# RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

**Drowning:—**  
 Son of a tailor, 7, drowning—fell into the water when reaching weeds ..... *instant*  
 Watch enameller, 70, found dead in the New River—how the body came into the water unknown.  
 M. 26, accidentally drowned whilst bathing in the water of the River Lea.  
 Caulker, 60, found dead at the entrance of Messrs. Young and Co.'s Dock, apparently drowned.  
 Single woman, 30, drowned herself—no proof in what state of mind at the time.  
 M. 60, drowning—no evidence how.

**Drowning (continued):—**  
 F. 22, suicide by drowning, being at the time in a state of intoxication—54 hours under water.  
 F. 1, drowning—wilful murder by the mother, who committed suicide by drowning herself at the same time.  
**Hanging:—**  
 Shoemaker, 41, hanged himself in a temporary state of insanity to a bedpost.  
 F. 47, suicide by hanging, in temporary derangement, produced by excessive drinking of spirituous liquors.

**Scald:—**  
 Daughter of a page to the Queen, 5, scald of the chest, from hot water spilt by running against a servant carrying a bowl ..... 53 hours  
**Use of Mercury:—**  
 F. 43 (no inquest), debility and the effects of mercury..... \*

NOTE.—In the abstract of last week 29 deaths were ascribed to violence, whereas the correct number is 28. One death was by mistake registered in two districts.

## FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

**St. George's H.:—**  
 M. about 35 (inquest—post mort.), apoplexy—ventricles filled with blood—fell suddenly in the street, supposed to be intoxicated, and died in ..... 38 hours  
 F. 23, phthisis .....  
 M. 27 (post mort.), enormously dilated and somewhat hypertrophied heart—granular degeneration of the kidneys .....  
 M. 59 (post mort.), granular degeneration of the kidneys .....  
 aggravated dyspepsia ..... 3 weeks  
 effusion into right pleura—enlarged and dilated heart.  
*See Violent Deaths.*

**Westminster H.:—See Violent Deaths.**  
**Charing Cross H.:—**  
 M. 44 (post mort.), phthisis .....  
 M. 20 (post mort.), peritonitis—ulcer of intestines—congenital hernia .....  
*See Violent Deaths.*

**Middlesex H.:—**  
 F. 25, cellular cutaneous erysipelas, terminating in typhus .....  
**University College H.:—No deaths registered.**

**Fever H.:—**  
 M. 32, { fever—pneumonia ..... 28 days  
 (post mort.) in hospital 20 days—from St. Marylebone. }

**Fever H. (continued):—**  
 F. 19, { ulcers in colon ..... long standing  
 (post mort.) peritonitis ..... 22 days  
 in hospital 20 days—from St. Marylebone.  
 F. 60, { fever ..... about 18 days  
 (post mort.) effusion of lymph on the colon. from St. George's East. }

**Small Pox H.:—**  
 M. 26, { smallpox (confluent) ..... 13 days  
 vaccinated when young—three good cicatrices.  
 F. 17, { smallpox (confluent) ..... 23 days  
 vaccinated when young—one good cicatrix. }

**King's College H.:—**  
 M. 28 (post mort.), phthisis .....  
 M. 50, cancer of the liver ..... some months  
 F. 36 (post mort.), ovarian disease ..... 4 months  
 F. 25, erysipelas ..... 7 days

**St. Bartholomew's H.:—**  
 M. 16, disease of the heart .....  
 M. 27, chronic pneumonia and disease of the kidneys .....  
 M. 34, tubercular peritonitis—ulceration of bowels—chronic pleurisy .....  
 F. 53, icterus .....  
 F. 37, aneurism of the ascending aorta .....  
 M. 59, fever, with tubercles in the lungs; and pneumonia ..... \*

**London H.:—**  
 M. 43, inflammation .....  
 M. 29, pericarditis .....  
 M. 56 (post mort.), strangulated hernia ..... \*

**St. Thomas' H.:—**  
 M. 53, endocarditis ..... 2 years

**Guy's H.:—**  
 M. 51, fever ..... 4½ weeks  
 M. 71, { femoral hernia (left) ..... 3 days  
 strangulation ..... 10 days  
 peritonitis .....  
 chronic inflammation, and hypertrophy of rectum .....  
 F. 35, { peritonitis after the use of the bougie, and pleuritis ..... 4 days  
 F. 30, { mild typhus ..... 20 days  
 arachnitis ..... very recent

**Dreadnought H.:—**  
 M. 18 (post mort.), tubercular peritonitis .... 6 months

**Royal Ordnance Hospital:—**  
 { 35 (post mort.), { consumption nearly 1 year  
 in hospital between 2 and 3 months.  
 Soldiers, { 41, consumption .....  
 { pleurisy .....  
 { 21, { smallpox (vaccinated twice) .. 12 days  
 inflammation of the throat .. \*

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, ETC.

**Small Pox:—**  
 M. 1, { small pox ..... 16 days  
 vaccinated 15 months ago.  
 F. 1, small pox (never vaccinated) ..... 10 days  
 F. 3, { small pox (not vaccinated) ..... 1 month  
 gangrene of face and gums ..... 8 days  
 F. 3, variola (never vaccinated) ..... 14 days  
 M. 1, small pox (not vaccinated) ..... 12 days  
 M. 10 mon., small pox (not vaccinated) ..... 8 days  
 M. 5, { small pox ..... 2 days  
 vaccinated 4 years ago.  
 F. 3, { small pox (after vaccination) ..... 9 days  
 no medical attendant.  
 M. 9, small pox (not vaccinated) .....  
 F. 7, { small pox ..... 14 days  
 twice vaccinated without effect 3 years ago.  
 F. 4, small pox (natural) .....  
*See Returns of Small Pox and Royal Ordnance Hospitals.*

**Typhus, &c.:—**  
 In St. John, Westminster, M. 6, phrenitis—typhus ..... 28 days  
 In St. John, Westminster, F. 13, fever ..... 3 weeks  
 In St. Margaret, Westminster, M. 33, pericarditis ..... 3 days  
 typhus ..... 5 days  
 In St. Margaret, Westminster, M. prisoner, 39 (inq.) typhus ..... 11 days  
 In St. Margaret, Westminster, M. 45, typhus, 5 days  
 In All Souls, F. 32, fever ..... 7 days  
 In May Fair, M. 23, typhus ..... 3 weeks  
 In the Rectory sub-district, Marylebone, M. 40, fever .....  
 In the Rectory sub-district, F. 2, fever ..... 3 weeks  
 In the Rectory sub-district, F. 33, typhus .....  
 In Christchurch sub-district, M. 19, typhus ..... 1 month  
 In St. John, Marylebone, F. 70, synchus ..... 3 days  
 In Islington (West), M. 16, typhus—hæmorrhage from the bowels ..... 14 days  
 In Islington (West), F. 5 mon., { dentition ..... 2 weeks  
 fever ..... 2 days  
 convulsions ..... 5 hours  
 In Hackney, F. 6, { low fever ..... 5 weeks  
 cerebral effusion ..... 1 hour  
 In City-road sub-district, F. 28, fever .....  
 In City-road sub-district, F. 19, fever .....  
 In Cripplegate, M. 1, fever—tabes ..... 6 weeks  
 In North-west sub-district of City of London, M. 4, pertussis ..... 1 month  
 pneumonia—epileptic convulsions—typhus  
 In South sub-district of City of London, M. 66, (post mort.) typhus—cerebral effusion ..... 4 days  
 In St. Leonard's, Shoreditch, M. 52, fever ..... 8 days  
 In Church sub-district of Bethnal-green, F. 7, typhus ..... 16 days  
 In Hackney-road sub-district, F. 2, { hydrocephalus ..... 24 days  
 district, F. 2, { typhus .....  
 In North sub-district of Whitechapel, M. 59, typhus .....  
 In North sub-district of Whitechapel, M. 37, typhus ..... 8 days

**Typhus, &c. (continued):—**  
 In Church sub-district of Whitechapel, M. 16, inflammatory fever ..... 6 days  
 In St. John, sub-district of St. George in the East, F. 50, fever .....  
 In Ratcliff, M. 61, typhus ..... 8 days  
 In Mile-end Old Town, Lower, F. 32, fever .....  
 In Poplar, M. 27, typhus ..... 7 days  
 In St. Saviour, { gastric fever ..... 6 weeks  
 M. 11 mon., { convulsions .....  
 In Christchurch sub-district, St. Saviour Union, M. 62, typhus with erysipelas of leg 10 days  
 In St. John, sub-district of St. Olave, M. 68, typhus ..... 5 days  
 In St. James, Bermondsey, { synchus ..... 2 months  
 subacute inflammation of mondsley, F. 2, { bronchitis .....  
 In Kent-road sub-district, F. 1, fever .....  
 In Borough-road sub-district, M. 70, typhus, 3 weeks  
 In Borough-road sub-district, F. 31, typhus, 3 weeks  
 In London-road sub-district, F. 11, continued fever ..... about 3 weeks  
 inflammation of membranes and substance of brain .....  
 In Waterloo sub-district (1st part) Lambeth, M. 2, febris ..... 3 weeks  
 In Lambeth Church sub-district (2d part), F. 30, fever .....  
 In Peckham, M. 19, atrophy from the effects of fever .....  
 In Peckham, F. 25, fever ..... 21 days  
 In St. Nicholas, Deptford, M. 27, fever—exhaustion ..... 14 days  
 Insub-district of Woolwich Arsenal, M. 76, typhus 5 weeks  
 In Greenwich East, M. 70, { febris ..... 7 days  
 erysipelas ..... 5 days  
*See Hospital Returns.*

**Remittent Fever:—**  
 In Cripplegate, F. 2, remittent fever ..... 3 weeks  
 In Leather-market, Bermondsey, M. 6, remittent fever ..... 3 weeks

**Syphilis:—No deaths registered from this cause.**  
**Hæmorrhage:—**  
 M. 50 (inquest), natural death—rupture of a vessel of the heart ..... sudden  
 Other cases of hæmorrhage are classed under apoplexy, hæmatemesis, &c.

**Malformation:—**  
 M. 6 weeks, malformation.  
 F. 3 weeks, cyanosis ..... from birth

**Hernia:—**  
 F. 59, { asthma ..... many years  
 strangulated hernia ..... 9 days  
 M. 3 days (post mort.), congenital umbilical hernia, involving 2 or 3 feet of intestine and omentum—artificial anus—followed by inflammation, effusion of lymph, and gangrene—spina hifida.  
 F. 59, strangulated hernia ..... 5 days  
*See Returns of Charing Cross and St. Thomas' Hospitals.*

**Diabetes:—No deaths registered from this cause.**

**Stone:—No deaths registered from this cause.**

**Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.**

F. 30, puerperal fever .....  
 F. 37 (inq.), natural—3 days after abortion—suddenly—not under medical treatment—had symptoms of disease.  
 F. 37, { childbirth—placental presentation...  
 flooding ..... 2 hours  
 F. 32, childbirth—fever ..... 3 weeks  
 F. 24, fever, aggravated by the birth of a putrid child ..... 7 days

**Cases classed under other heads:—**  
 F. 45, inflammation of uterus ..... \*

**Query—Did this occur after childbirth?**  
 F. 23, { pneumonia ..... 9 months  
 childbirth ..... 5 days  
 inflammation of bowels ..... 3 days

**Delirium Tremens:—**  
 M. 29, delirium tremens ..... 8 days

**Intemperance; Privation:—**  
 No deaths assigned in abstract to either of these heads.

**Want of Breast-milk:—**  
 F. 3 mon., inanition from want of breast-milk .....  
 F. 8 weeks, want of breast-milk and general decay..... \*

**Purpura and Scurvy:—**  
 F. 13, purpura hæmorrhagica ..... 5 days  
 M. 47, { purpura ..... 3 weeks  
 had had attacks of delirium tremens .....  
 M. 49, { insanity ..... 6 months  
 scorbutic ..... \*

**Paralysis and Purpura:—**  
 M. 79, { paralysis ..... 1 year  
 scorbutus ..... 6 weeks  
 M. 43, { paralysis ..... 2 years  
 purpura ..... 3 weeks

**Miscellaneous Causes:—**  
 M. 31, (inq., post mort.), polypus of the heart, closing passage between right auricle and ventricle—taken suddenly ill in a public house, and died in half-an-hour—not previously ill.  
 M. 48, { scrofulous disease of wrist-joint .....  
 amputation .....  
 phthisis pulmonalis ..... 2 months  
 F. 35, ovarian dropsy ..... 2 years  
 F. 62, ovarian dropsy ..... 6 months

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 26; apoplexy, 6; disease of the heart, 3; rupture of a vessel of the heart, 1; abortion, 1; other specified causes, 8; "natural death," "visitation of God," "found dead," &c. 6.—TOTAL, 51 cases.  
 THE NUMBER OF CASES IN WHICH IT IS RECORDED THAT A POST MORTEM EXAMINATION WAS MADE, IS 47.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH.

During the Week ending Saturday, 12th June, 1847.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning
			Dry			Dew Point	Highest in the sun, as shown by a self-register- ing Thermometer	Lowest on the grass, as shown by a self-register- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12 Diffs.	Greatest	Least	General Direction			Pressure in lbs. on the square foot			Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive but very weak in the afternoon. Nothing was shewn at any other times.		In the morning the sky was partially covered with cirrocumuli, cirrostratus, and scud. During the remainder of the day it was overcast with cirrostratus, cumuli, and scud.
MON.	Nothing was shewn till 6h. a.m. After- wards it became positive with variable ten- sion, the maximum occurring at 10h. p.m.		The sky was occasionally clear till 9h. a.m. Generally overcast during the remainder of the day.
TUES.	Negative and tension moderate at about 9h. 20m. a.m., and very active from 5h. 30m. till 6h. 12m. p.m. At other times during the day it was positive with tension moderate, and occa- sionally nothing shewn.	Rain falling.	Overcast till 6h. p.m., with fine rain falling occasionally. About one-third of the sky was covered with cirrostratus and scud during the remainder of the day. There was a heavy squall of wind and rain from 5h. 30m. till 6h. 12m. p.m. Several peals of thunder were heard.
WED.	Positive and tension moderate through- out the day.		Cloudless from 5h. a.m. till 8h. a.m. At other times during the day the greater part of the sky was covered with cirrostratus, detached cumuli, and scud.
THURS.	Negative and tension strong till 6h. a.m., and at about 7h. p.m. Positive but very weak at other times.	Rain falling.	The sky was overcast throughout the day, with the exception of a few breaks at a little before midnight. Rain fell occasionally throughout the day.
FRID.	Positive and tension weak till 2h. p.m. Tension strong during the remainder of the day.		Generally cloudless till 5h. a.m.; from this time till 6h. p.m. the sky was about two-thirds covered with cumuli, cirrostratus, and scud. Cloudless during the remainder of the day.
SAT.	Positive with tension moderate, and very uniform, throughout the day.		About one-third of the sky was covered with cirrostratus and cumuli throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. It has been in the hands of the maker for repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 50.4; and the mean reading at 7h. 30m. P.M., was 55.9; the mean readings at the Royal Observatory for the same times were 50.1 and 55.2 respectively.

† The mean direction of the wind for the week is N.W.

# Births and Deaths registered in London,

During the Week ending Saturday, June 19th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population	Males .....	468	Deaths registered in the Week	Males .....	537	Births registered in the Week	Males .....	620
	Females .....	446		Females .....	441		Females .....	558
	Total	914		Total..	978		Total..	1178

\* The ages of 2 persons, whose deaths are ascribed to violence, are not stated.

NOTE.—The number of deaths in the present return is increased in some degree by an accumulation of cases on which inquests have been held, principally in Guy's, St. Thomas', and Middlesex Hospitals. It frequently happens that Coroners' returns are entered in the Registers, not immediately after the inquests, but when a considerable time has elapsed. In the above table, the violent deaths exceed by 36 the weekly average under this head; and it is probable that this difference indicates nearly the amount of correction which it is proper to make.

DISTRICTS OF LONDON,  
Comprising 135 Registrars' Districts.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 24.

(The tabular abstract on the first page is for the week ending Saturday, June 19th. The following selection of cases is made from the returns for the week ending June 12th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning:—	duration
In London Hospital, waterman, 46, accidental from a dislocation of ankle, caused by a fall	*	In London Hospital, police sergeant, 43 ( <i>post mort.</i> ), accidentally run over by a gig and horse, causing fracture of the skull	3 days	Cellar-man, 26, drowned when bathing in the Serpentine River (underwater about 25 min.)	
Pensioner of the Honourable East India Company, 75, sudden death, accelerated by a fall how caused unknown.		In London Hospital, carman, 24 ( <i>post mort.</i> ), accidentally run over by a waggon, causing fracture of the leg, and crushing the hand	11 days	Painter and glazier, 37, drowned in the Serpentine River—no evidence how he came into the water. A woman with child by him was found at the same time, and some clothes of each were found together on the bank—no mark of violence.	
Tunman at a brewery, 38, suicide—concussion by throwing himself off Goding's brewery, and falling into a barge (Belvidere Road, Lambeth)	instant	Son of a labourer, 9 ( <i>no inquest</i> ), extensive injury to the head, by being run over by the wheel of a gig	18 months	Servant, single woman, 23, drowned—no evidence how she came into the water. (Other particulars of this case are stated in the entry preceding.)	
In London Hospital, labourer, 44, accidental by the fall of a portion of a gravel field on his body	*	F. domestic servant, 19, suicide by placing herself on the London and South-Western Railway, before a locomotive engine in progress, being at the time in a temporary state of insanity.		Son of a carver and gilder, 16, drowned by falling into a certain ditch accidentally, in a fit (in the water 10 minutes).	
In London Hospital, cook, 25, accidental from a blow on the head from a piece of wood, which was being loaded into a ship	1 day	M. 35 ( <i>no inquest—post mort.</i> ), Pott's fracture 23 days threatened gangrene	(first 24 hours)	Coal merchant, 31, accidentally drowned by the swamping of a wherry (in the water 6 ds.)	
In London Hospital, wife of a ship-joiner, 42, wilful murder against Gilbert Macdonald—death from rupture of intestines and fracture of ribs	*	dislocation, accompanied by sphacelus	11 days	Burns and Scalds:—	
Son of an engineer, 8 mon., contusion and compression by the box of a mangle falling on his head accidentally.		secondary abscess in lungs.		M. 6, burns by his clothing taking fire accidentally	24 days
		Widow, 78, found dead—crushing of right lung and chest—wilful murder against Mary Ann Hunt	*	M. 1 ( <i>no inquest</i> ), result of a scald	3 weeks

Query—How was the scald caused?

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

## St. George's H.:—No deaths registered. duration

### Westminster H.:—

F. 51, phthisis pulmonalis ..... 3 months  
F. 32, hydrothorax—ascites .....  
F. 23, { general dropsy ..... 7 weeks  
          ulceration of kidneys.

### Charing Cross H.:—

M. 53, { chronic disease of the liver and  
          kidneys—secondary syphilis—  
          chronic pneumonia of right lung  
          —hæmoptysis ..... \*

### Middlesex H.:—

M. 60, dropsy after scarlet fever ..... 14 days  
M. 48, aneurism of aorta ..... 6 months  
M. 68, fistula in perinaeo ..... 20 years  
M. 68, inflamed legs .....

### University College H.:—No deaths registered.

### Fever H.:—

M. 29, { fever .....  
          pneumonia—pericarditis and effu-  
          sion of lymph—granular kidneys  
          from Wandsworth—in hospital  
          2 days.

## Fever H. (continued):— duration

F. 63, { fever .....  
          cirrhosis of liver .....  
          granular kidneys ..... long standing  
          from Camberwell—in hospital 18  
          days.

F. 44, { fever ..... 3 weeks  
          fatty degeneration of heart .....  
          from St. Pancras—in hospital 12  
          hours.

F. 48, { fever ..... 40 days  
          pleuro-pneumonia ..... 20 days  
          from Lambeth—in hospital 28 days.

### Small Pox H.:—

M. 21, smallpox, natural, confluent .....  
F. 2, smallpox, natural, confluent .....  
M. 24, smallpox, natural, confluent .....

### King's College H.:—

F. 65 (post mort.), cancer of duodenum. .... \*

### St. Bartholomew's H.:—

M. 63, disease of bladder and kidneys .....  
F. 19, phthisis—ulceration of intestines .....  
F. 13, phthisis .....

### London H.:—

M. 2 (inquest—post mort.), sudden from fits,  
caused by congestion of the vessels of the  
brain .....

See Violent Deaths.

## St. Thomas' H.:— duration

F. 27, phthisis .....  
F. 38, disease of rectum—enlarged liver ..... 3 years  
M. 52, typhus ..... 14 days  
M. 64, disease of bladder .....  
M. 48, phthisis ..... 19 months  
F. 34, typhus ..... 22 days

### Guy's H.:—

F. 43, cancer mammae—peritonitis .....  
M. 18, scarlet fever .....  
M. 19, hydatid cyst, obstructing the biliary  
ducts—jaundice .....  
M. 25, pneumonia—pleurisy .....  
M. 18, consumption .....  
F. 46, peritonitis from stricture of rectum .....  
F. 52, sloughing wound, after amputation of  
breast for cancer .....  
F. 29, abscess of left kidney—tubercles in  
arachnoid and lungs .....  
F. 47, bronchitis and diseased mitral valve .....  
F. 60, diarrhoea .....

### Dreadnought H.:—

{ typhus ..... 51 days  
M. 16, { abscess in the right ankle joint ..... 10 days  
          abscess over the larynx ..... 3 days  
          ulceration of Peyer's glands.  
M. 26, { typhus ..... 20 days  
          extensive ulceration of Peyer's  
          glands.  
          pneumonia of each base.

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, ETC.

### Small Pox:— duration

M. 8, small pox ..... 15 days

NOTE.—In all cases it should be stated whether vaccina-  
tion had been performed successfully.

M. 1, small pox (never vaccinated) no medical  
attendant .....  
M. under 1, small pox—natural—without pre-  
vious vaccination .....  
M. 1, variola—confluent (never vaccinated) ..... 8 days  
F. 4, { small pox (first attack—never vaccinated) 4 weeks  
          sloughing genitals ..... 2 weeks  
M. 2, small pox (not vaccinated) .....  
F. 1, confluent small pox ..... 3 weeks  
F. 2, { small pox (first attack) ..... 9 days  
          vaccinated 1 year ago.

See Returns of Small Pox Hospital.

### Chicken Pox:—

F. 2, { chicken pox ..... 14 days  
          water of the head ..... 7 days

### Typhus, &c.:—

In St. Margaret, Westminster, F. 4, fever .....  
In St. Clement Danes, M. 62, fever ..... 3 weeks  
In sub-district of St. Olave, F. 10 mon., den-  
tition—synchus—convulsions ..... 11 weeks  
In Greenwich (West), M. 1, fever and pneu-  
monia ..... 3 weeks  
In St. John, Westminster, F. 48, typhus ..... 2 weeks  
In Rectory (sub-district) St. Mary-le-bone,  
F. 49, typhus .....  
In St. John, St. Mary-le-bone, M. 51, fever  
and convulsions ..... 14 days  
In Somers Town, { continued fever ..... 8 days  
                          pneumonia ..... 6 days  
In Somers Town, F. 17, synchus ..... 10 days  
In sub-district of Regent's Park, F. 57, in-  
flammatory fever .....  
In Islington (East) M. 7, fever .....  
In Islington (East) F. 1, fever ..... 10 days  
In St. Giles (North) M. 3, fever—convulsions .....  
In North-west sub-district { bronchitis ..... 3 months  
  typhus ..... 4 weeks  
In Hoxton, Old Town, M. 30, typhus with  
hepatic disease ..... 2 weeks  
In the Artillery sub-district of Whitechapel,  
F. 8, fever ..... 14 days  
In Whitechapel (North), M. 47, typhus .....  
In Whitechapel (North) F. 48, synchus .....  
In Whitechapel (North) F. 74, synchus and  
infirmities of age .....

In St. Mary (St. George in the East), M. 33, { typhus ..... 5 days  
  pneumonia ..... 3 days  
  effusion into the pleura  
  and pericardium, 1 day  
In Mile End Old Town { debility ..... several years  
  fever ..... 3 weeks  
In Poplar sub-district, F. 16, typhus ..... 5 days  
In Kent-road sub-district, M. 48, typhus—  
paralysis .....  
In Kent-road sub-district, F. 80, fever .....

### Typhus, &c. (continued):— duration

In Trinity (St. Mary, Newington) M. 6, fever, 12 days  
In Lambeth Church sub-district (2nd part),  
F. 80, low fever—old age .....  
In Kennington (2nd part) F. 2, febris syn-  
chus—serous affection of the brain ..... 21 days  
In Camberwell (sub-district), F. 3, brain fever, 14 days  
In Peckham, M. 15, synchus ..... 11 days  
In Peckham, F. 11, fever, with inflammation of  
the brain ..... 14 days  
In Peckham, F. 38, fever ..... 10 days  
In St. George (Camberwell), F. 5 mon., fever  
dysentery ..... 3 days  
In St. Nicholas, Deptford, M. 2, fever—  
diarrhoea ..... 2 months  
In sub-district of Woolwich Dock-yard, M. 20,  
febris ..... 26 days  
In Greenwich (East), M. 64, fever ..... 3 weeks  
In Wandsworth, M. 36, low fever ..... 10 days

See Hospital Returns.

### Remittent Fever:—

M. 1, remittent fever ..... 3 months

### Infantile Fever:—

F. 1, { infantile fever ..... 14 days  
          effusion on the brain ..... 5 days

### Syphilis:—

M. 2 months, syphilis ..... 5 weeks

See Return of Charing Cross Hospital.

### Hæmorrhage:—

F. 23, hæmorrhage ..... 2 weeks  
M. newly born (inquest), hæmorrhage by the  
umbilical cord not being secured, but whe-  
ther left so designedly or not, or under  
what circumstances born, no proof.

### Malformation:—

M. under 1, malformation—exhaustion.  
M. 20 (post mort.), malformation of the heart,  
M. 2 weeks, spina bifida.  
M. 9 days, cyanosis .....

### Hernia:—No deaths registered from this cause.

### Diabetes:—No deaths registered from this cause.

### Stone:—

M. 8, stone—paralysis .....

### Childbirth:—The time lapsing from commencement of labour to death should invariably be returned.

F. 32, { delivery ..... 3 hours  
          uterine hæmorrhage .....  
F. 43, { rupture of the uterus in childbirth, ..... 2½ hours  
          excessive pain and loss of blood con-  
          sequent thereon.  
F. 23, { childbirth ..... 8 days  
          hysteritis .....

### Delirium Tremens:— duration

M. 47, cerebral congestion—delirium tremens, 4 days  
M. 43, delirium tremens ..... 10 days  
M. 23 (inquest), natural death—sudden—from  
delirium tremens .....  
M. 55, inflammation of the lungs and delirium  
tremens ..... 14 days

### Phthisis and Delirium Tremens:—

M. 37, { phthisis ..... some months  
          œdema glottidis ..... 6 days  
p.m. { delirium tremens ..... 2 days

### Intemperance:—No deaths registered from this cause.

### Privation:—

M. 11 mon. (inquest), exhaustion from want  
of food of proper quality—his mother's milk  
failing her on the road with him from Ire-  
land to London.  
In St. James, Clerkenwell, M. 34 (inq.), star-  
vation and want of the common necessities  
of life, the result of his own inprudence  
and refusal to earn a living. .... \*

### Want of Breast-milk:—

M. 10 weeks, marasmus from want of breast-  
milk—no medical attendant .....  
F. 6 mon., atrophy from want of breastmilk ..... 1 month  
F. 5 mon., diarrhoea from want of breastmilk ..... 4 months  
F. 8 mon., ulcerative stomatitis from imperfect  
nutrition .....

### Miscellaneous Causes:—

F. 20, a native of { asphyxia ..... 30 min.  
                          Demerara, which { diseased state of larynx,  
  she left 2 yrs. ago, ..... about 2 years  
  lepra tuberculosa ..... 10 years  
F. 27 (post mort.), hypertrophy of left ventricle  
of heart—induration—nutmeg liver—dis-  
ease of kidneys—ovarian cyst—dropsy ..... 1 year  
M. 49, cirrhosis—fever ..... 10 days  
F. 45, { cirrhosis and phthisis ..... 18 months  
          ascites ..... 4 months  
M. 51, tuberculated liver .....  
M. 73, ascites from cirrhosis ..... 6 weeks  
M. 45, { jaundice from gallstones ..... 4 days  
          congestion of the brain ..... 2 days  
M. 2, phagedæna in the ear and side of the  
head, originating from teething .....  
M. 21, { consumption ..... 6 months  
          inflammation of the brain from study, 3 months  
F. 41, { hydatid tumour .....  
          causing obstruction of the bowels ..... 2 days  
M. 65, lupus .....  
M. 3 weeks, pompholyx .....

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 17; apoplexy, 2; ossification of heart, 1; privation, 2; other specified causes, 6; "natural death," "visitation of God," "found dead," &c. 10.—TOTAL, 38 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 37.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 19th June, 1847.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at any examination throughout the day.		Overcast throughout the day. There were occasionally slight showers of rain.
MON.	Positive and tension moderate till 4h. a.m., and from 2h. p.m. till 10h. p.m. Nothing was shewn at any other times.		Generally overcast throughout the day. A thin rain was falling at intervals.
TUES.	Nothing was shewn till 9h. a.m. Strong negative and occasional positive electricity was shewn from 9h. 30m. a.m. till 3h. 35m. p.m. Sparks were frequent, and several galvanic currents shewn.	Rain in squalls.	Cloudless from 2h. a.m. till 6h. a.m. From this time till 6h. p.m. the sky was generally about two-thirds covered with cirrostratus, cumuli, and scud till 8h. p.m., and cloudless during the remainder of the day. There were occasional squalls of wind and rain.
WED.	Negative and tension moderate from 9h. a.m. till noon. Positive but generally weak at other times.	Rain falling.	The sky was cloudless till about 2h. a.m., and overcast during the remainder of the day. Rain was falling occasionally during the morning and afternoon.
THURS.	Positive and tension strong from 7h. a.m. till 2h. p.m., and from 7h. p.m. till 9h. 30m. p.m. Nothing was shewn at any other times.		The sky was generally covered with cirrostratus, fleecy clouds, and scud throughout the day. A light rain was falling in the evening.
FRID.	Negative and occasionally positive from 5h. a.m. till 4h. p.m. Positive and tension moderate during the remainder of the day.	Rain generally falling.	Overcast till 4h. p.m., and about three-fourths covered with cirrostratus, fleecy clouds, and scud during the remainder of the day. Rain was falling at intervals during the morning.
SAT.	Positive and tension generally strong till 8h. p.m. Nothing was shewn after this time.		Cumulostrati, cirrostratus, and scud covered the greater part of the sky till 6h. p.m. Generally clear during the remainder of the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 55.0; and the mean reading at 7h. 30m. P.M., was 58.7; the mean readings at the Royal Observatory for the same times were 53.7 and 57.6 respectively.

† The mean direction of the wind for the week is S.S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, June 26th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 25.

(The tabular abstract on the first page is for the week ending Saturday, June 26th. The following selection of cases is made from the returns for the week ending June 19th.)

CORONER'S CASES.—Violence, 59; apoplexy, 7; disease of the heart, 2; intemperance, 2; other specified causes, 19; causes not specified, 12.—TOTAL, 101 cases.  
POST MORTEM EXAMINATIONS, 62.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
M. 61, natural death—sudden—accelerated by a fall .....	*	In Middlesex Hospital, M. seller of firewood 54, crushing of the head by a cart wheel from slipping off the shaft .....	3 days	M. 35, drowning—was of unsound mind.	
In Middlesex Hospital, bricklayer's labourer 21, a fall on the back fifteen feet from a roof, while drunk at work .....	*	In St. Thomas' Hospital, labourer 19, rupture of the bladder and other internal injuries from being run over by a waggon which he was driving down Bromley-hill, by his accidentally slipping down .....	2 days	F. 20, drowning—not known how she came into the water—suspected of going to the river to commit suicide.	
In Middlesex Hospital, tailor 27, erysipelas of the head from a wound of the forehead, by falling in the street while drunk .....	12 days	In Guy's Hospital, daughter of a shoemaker 2, internal injuries to the abdomen from the kick of a horse drawing a van in White-street, Southwark .....	36 hours	M. 19, accidentally drowned by a fall from a boat into the Regent's canal basin.	
House-painter about 33, fracture of the thigh and other injuries caused by a fall from a scaffold .....	*	In Guy's Hospital, son of a brushmaker 7, fractured jaw and other injuries from being run over by a cart in St. Andrew's-road, Horse-monger-lane (post mort.) .....	3 days	Sou of a cooper 10, found dead without marks of violence, in a reservoir of water.	
In Guy's Hospital, clerk at Exeter Hall, 46, (post mort.) exhaustion caused by the ligature connecting the right kneecap with the bone of the leg being broken by a fall on London Bridge .....	10 days	In Guy's Hospital, overlooker of ballast trains 27, fracture of his skull by being knocked down and run over by a railway train on the Greenwich line at the Spa-road .....	30 minutes	F. (age unknown) found dead—apparently drowned without marks of violence.	
In Guy's Hospital, shipwright 36, fracture of his skull caused by falling on a float of timber, in the East County Dock at Rother-hith, the cause of his fall unknown .....	8 hours	In St. Thomas' Hospital, labourer at the South Western railway 19, fracture of his skull by the body of a railway carriage falling on him whilst removing some wood from under it, at Nine Elms railway station .....	3½ hours	M. 54, drowned, but how he came into the water no sufficient proof.	
In Guy's Hospital, coffee-house-keeper 49, (post mort.) effects of a fractured thigh, and other injuries caused by falling from a wall at the London terminus of the Greenwich railway .....	11 days	M. 62, injury to the right side .....	*	Hanging and Suffocation:—	
In Guy's Hospital, labourer 53, exhaustion caused by compound fracture of his left thigh by a fall in one of the new wards of Guy's Hospital .....	4½ months	F. 3, (no inquest), debility from birth—bruise on right leg at the knee .....	*	M. servant of all work about 37, suicide by hanging—state of mind unknown.	
In St. Thomas' Hospital, labourer 56, (post mort.) fractured ribs and injury to his lungs by a fall whilst pulling down a house .....	4 days	In St. Thomas' Hospital, porter on the South Western railway 25, laceration of his scalp, and other injuries caused by a railway train at Farnborough station, as he was incantiously walking on the line .....	13 hours	Tinman 26, hanging—suicide while drunk.	
M. 82, (no inquest), ieterus following severe injuries occasioned by a fall .....	10 days			F. 16, hanged herself in a privy—in a temporary state of insanity.	
M. 21, accidentally killed by a fall down stairs, causing concussion of the brain .....	instant			F. pauper, formerly a housekeeper, about 78, strangulation—suicide with a cord fastened round the neck—not known whether insane.	
Labourer 48, inflammation of the lungs caused by falling with a sack of cement on his back (in Lambeth) .....	5 days			M. 3 months, found dead, apparently suffocated, without marks of violence.	
F. 46, manslaughter against Henry Jones Harrison—rupture of gall-bladder by a kick .....	*			Sailor 35, found dead—having fallen out of bed and become suffocated on a pillow—how caused no evidence.	
Foreman gateman 56, accidental by a blow from a broken spritsail yard, and submersion in the waters of the docks (1 month).				Son of a seller of eat's meat 6 weeks, suffocation accelerated by convulsions.	
M. (unknown) newly born, wilfully murdered by persons unknown, by blows on the head .....	*			F. recently born (p.m.), suffocation; but no evidence how caused .. probably tied only a few hours	
F. 30, (no inquest) laceration of the peritoneum .....	5 days			F. 5 weeks, suffocation from being overlaid by the mother accidentally during sleep.	
Query—How was this caused?					
M. 25, blow on the head by a plank which slipped from the dog-clamps of a crane on raising it from a railway truck .....	instant			Burns and Scalds:—	
F. 54, fractured ribs from having been accidentally upset in a cart .....	7 days			F. 7, burns, from a child, not legally responsible, firing her clothes with a lucifer match, when the mother was absent .....	*
M. 52, fractured ribs, with laceration of the lungs, from being run over by his own caravan, having fallen therefrom while trying to pick up his reins .....	instant			In Guy's Hospital, son of a traveller 8, burnt by his clothes taking fire whilst poking the fire (at Gravel-lane, Southwark) .....	27 hours
In St. Thomas' Hospital, carman 21, fractured skull and lacerated brain, by falling from a water cart in the Wandsworth-road—supposed to be in a fit .....	1 hour			In Guy's Hospital, child of a spinster 2, burnt by his clothes taking fire, whilst left by himself (at White Hart-court, Bermondsey-st.)	1 month
In Guy's Hospital, teacher of music about 50, (post mort.) pleurisy and inflammation of his lungs, caused by a fracture of his left leg from falling off an omnibus which was upset at Brixton .....	4 days			In Guy's Hospital, daughter of a shoemaker 10, burnt by her pinafore taking fire, whilst taking a kettle off the fire (at Southwark-bridge-road) .....	15 hours
				In Guy's Hospital, spinster, daughter of a labourer 20, burnt by her clothes taking fire from a candle which she had placed on the floor (at Clapham) .....	8 hours
				In St. Thomas' Hospital, son of a labourer 14, scalded by falling into a pan of boiling potash, whilst gauging it (at the Spa-road) ..	3 days
				Poison:—	
				In St. Thomas' Hospital, bricklayer, 51, (p.m.) poisoned himself by taking an ounce of opium in temporary insanity .....	13 hours
				M. 19, poisoned himself by taking Butler's vermin-killer .....	1 or 2 hours
				F. 18, prussic acid taken by mistake ..	almost instantly

**FIFTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS**

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at any examination throughout the day.		Overcast till 9h. a.m. The amount of cloud was very variable during the remainder of the day. Rain was falling at about 11h. a.m., and 4h. p.m.
MON.	Positive and tension weak at 1h. a.m. Nothing was shewn at any other time.		The sky was mostly covered with cirrostratus and scud throughout the day.
TUES.	Nothing was shewn till noon. Positive and tension weak from this time till 10h. p.m.		Cirrostratus, cumuli, and scud generally covered the greater part of the sky till 6h. p.m. Cloud- less during the remainder of the day. Rain was falling at about 1h. a.m. and 2h. p.m.
WED.	Nothing was shewn till 11h. a.m. Negative and very active from 11h. a.m. till 3h. 30m. p.m. Sparks were abundant, and several gal- vanic currents were shewn. Positive with variable tension during the remainder of the day.	Rain falling at intervals.	The greater part of the sky was clear till 8h. a.m. Mostly overcast during the remainder of the day. Slight rain was falling at about noon, and at 3h. p.m. At about 11h. p.m. a perfect lunar halo was visible, and at 11h. 30m. p.m. two well formed paraselecnæ were seen, each at the distance of 23½° from the moon.
THURS.	Positive and tension strong throughout the day, except at about 11h. 20m. a.m., when it was negative and very active. Sparks were frequent, and several galvanic currents were shewn.		Generally overcast throughout the day. There were occasionally extensive breaks during the afternoon.
FRID.	Positive and weak till 3h. a.m. Positive and tension moderate from 2h. p.m. till midnight.		Generally overcast throughout the day. Slight rain was falling occasionally throughout the day.
SAT.	Positive and tension generally strong throughout the day.		The sky was about two-thirds covered with cirrostratus, fleecy clouds, and scud throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 55°4; and the mean reading at 7h. 30m. P.M., was 60°5; the mean readings at the Royal Observatory for the same times were 54°8 and 58°8 respectively.

† The mean direction of the wind for the week is S.S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, July 3d, 1847.

Weekly Average derived from Deaths of 1842-3-4-5-6, and corrected for increase of Population		5 Summers.		Deaths registered in the Week		Births registered in the Week	
Males .....	479	Females .....	461	Males .....	484	Males .....	643
				Females .....	449	Females .....	634
Total .....	940			Total..	933	Total..	1277

\* The ages of 2 persons, whose deaths are ascribed to *violence*, are not stated.  
† A man died in the Tottenham sub-district of St. Pancras, whose age is reported to be 101 years; and a woman in St. Margaret, Westminster, at the age of 100 years. In the former case, the cause of death was "general decay of nature;" in the latter "old age—apoplexy (a few days)."  
NOTE.—The number of deaths in the present return is increased in some degree by an accumulation of Coroner's cases, many of which, though they occurred some time previously, were not placed on the Registers till the end of the quarter. They fall, for the most part, under *violent and sudden deaths*; and as 36 represents the united average under these heads, the difference (namely 62) between this and the actual number returned as above, will nearly show the excess arising from this cause.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 26.

(The tabular abstract on the first page is for the week ending Saturday, July 3d. The following selection of cases is made from the returns for the week ending June 26th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Burns and Scalds:—	duration
Widow, 82, injuries to the head, caused by a fall into the area of No. 18, Cbad's Row..	*	Pensioner of dragoons, 54, suicide by drowning in a water-butt—state of mind unknown.		M. 4, accidental burn—clothes caught fire from a lucifer match .....	*
Daughter of a cooper, 2, inflammation of the brain, from concussion caused by a fall ..	16 days	F. 15, found dead without marks to account for death—apparently drowned.		F. 74, burns from a candle falling beside the bed at night, and setting fire to the bed clothes .....	2 hours
Son of an engineer, 15, crushed by the falling of an iron wheel upon him accidentally, in Christy and Adams' iron works, at Rotherhithe.		Seaman, 28, drowned whilst getting from the ship's boat on board the brig "Barnsley," (under water 18 days.)		F. 24, burns—clothes caught fire from a piece of lighted paper in her hand, as she stooped to pick up something .....	23 hours
Wife of a labouring man, 42 (post mort.), a mortal blow on the head—but how caused no evidence .....	*	Son of a labourer, 12, accidentally drowned by falling into the water from barges, a swell having been caused by steamboats. M. 46, bodily injuries, by falling out of a cart accidentally .....	4 days	Cabin boy of the "Mary Ann," of Goole, 17, drowned—no marks of violence—no proof how he came into the Thames (under water 6 days).		M. 2, wounds caused by an accidental scald ..	*
M. 33, { paralysis from injury to the head 3 years (no inquest), } cerebritis .....	5 days	Seaman about 19, apparently from drowning.		Poison:—	
M. 57 (no inquest), fractured ribs—delirium tremens .....	3 days	* Lighterman, 20, drowning.		Gentleman, 74, poisoned himself with prussic acid, in a state of temporary insanity ....	*
In St. George's Hospital { fractured ribs .... 9 days		* Coal porter, about 38, accidentally drowned from having fallen from a coal barge (under water 20 minutes).		* Clerk and shopman, 44 (post mort.), swallowing laudanum—no evidence of the state of his mind.	
M. 40 (no inquest), { pneumonia .....	*	Suffocation:—		M. 45, natural death—debility upon pulmonary affection, assisted by injudiciously taking an ounce of salts, mixed in cold water....	*
Wounds:—		F. a few minutes, suffocation by being put into a bag, with a cloth over her face, and then dropped in the public street—wilful murder against some person or persons unknown.		Neglect:—	
Son of a earman, 4, suffocation from inflammation caused by a wound in the roof of the mouth, from a piece of stick being suddenly knocked into the mouth .....	1 week	Daughter of a labourer, 6 wks., suffocated accidentally against her mother's breast.		M. newly born (post mort.), wilful murder by neglect at birth—persons unknown.	

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	University College H. (continued):—	duration	Fever H.:—	duration
M. 29, { chronic pleurisy .....	2 months	M. 39, { phthisis .....	*	M. 60, { fever .....	36 days
(post mort.) { miliary tubercles in the lungs.		M. 39, { hæmoptysis .....	8 weeks	M. 60, { in hospital 6 days—from St. Pancras.	
M. 59, disease of the stomach .....	*	M. 15, continued fever .....	38 days	M. 65, { fever .....	*
{ fungus hæmatodes of testis .....	6 months	M. 57 (post mort.), tumour of posterior lobe of left cerebrum .....	*	(post mort.) { pleuro-pneumonia.	
M. 46, { castration .....	9 days			{ from St. Martin-in-the-fields—in hospital I day.	
(post mort.) { encephaloid deposit in lung—tumour in lumbar region—peritonitis.		M. 18, { scarlatina maligna .....	10 days	M. 26, { delirium tremens .....	*
F. 2 (post mort.), bronchitis and old pneumonia	*	(post mort.) { sloughing of tonsils, velum, and pharynx.....	4 days	(post mort.) { ulceration of colon .....	old standing
F. 28, phthisis pulmonalis .....	*	{ pneumonia .....	3 days	{ valvular disease of heart.	
See Violent Deaths.					
Westminster H.:—No deaths registered.		F. 51, { strangulated hernia.....	*	M. 27, { fever .....	10 days
Charing Cross H.:—		F. 24, primary deep-seated abscess among the muscles of the neck—minute secondary abscesses (few in number) of the lungs ..	13 days	{ in hospital 4 days—from Holborn.	
M. 19, pneumonia—suppuration in the right lung .....	*			F. 30, { fever .....	*
F. 38, chronic catarrh .....	some months	M. 35, { phthisis .....	3 months	{ in hospital 6 hours—from West London Union.	
Middlesex H.:—		(post mort.) { pneumonia .....	16 days	F. 20, { fever .....	*
M. 11, acute meningitis .....	14 days	{ gangrene of lungs .....	8 days	(post mort.) { pneumonia—blood fluid.	
F. 40, paracutis—ramollissement .....	8 months	F. 31, { compound cystoid ovarian dropsy	*	{ from Holborn—recently from Ireland—in hospital 12 days.	
F. 24, cancer uteri .....	*	(post mort.) { prolapsus uteri—ascites ....		{ fever .....	5 weeks
University College H.:—		{ paracutis .....	15 days	(post mort.) { pleuro-pneumonia.	
M. 34, { albuminuria .....	long standing	{ no recent peritonitis.		{ from St. Martin-in-the-fields—in hospital 2 days.	
{ fatty degeneration of kidneys.		F. 36, { Bright's disease of the kidneys—enlarged liver—ascites—anasarca 3 months		F. (age not stated), { fever .....	12 days
{ phthisis .....	6 months			(post mort.) { pneumonia and pleurisy.	
{ ascites .....	*			{ from Kentish Town—in hospital 9 days.	

THIRTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued):—

Small Pox H.:—No deaths registered.		duration		London H.:—		duration		Guy's H.:—		duration	
King's College H.:—No deaths registered.				M. 50, consumption . . . . .		1 year		M. 27, morbus Brightii . . . . .		*	
St. Bartholomew's H.:—				M. 60, general decay—diseased lungs . . . . .		2 years		M. about 60, phthisis . . . . .		*	
F. 43, peritonitis, after tapping for ascites . . . . .	*			M. 39, retention of urine . . . . .		*		M. 43, disease uncertain ( <i>post mortem examination not allowed</i> ). . . . .		*	
F. 24, phthisis . . . . .	*			M. 18, consumption . . . . .		5 months		F. 28, phthisis . . . . .		*	
F. 16, St. Vitus's dance . . . . .	*			St. Thomas' H.:—				F. 38, pneumonia . . . . .		*	
F. 19 ( <i>post mort.</i> ), malignant disease of the uterus, ovaries, and peritoeum . . . . .	*			F. 25, destitution; and premature removal after confinement . . . . .		*		F. 12, phthisis . . . . .		*

F. 25, ulcerated rectum, with excrescences on the anus—fever . . . . .	*			M. 58, pneumonia . . . . .		9 days		{operation . . . . .		*	
F. 33, dropsy, with albuminous urine . . . . .	*			M. 23, ascites—anasarca—pneumonia (right lung) . . . . .		*		{erysipelas . . . . .		*	
Dreadnought H.:—No deaths registered.											
DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, ETC.											
Small Pox:—		duration		Typhus, &c. (continued):—		duration		Malformation.—		duration	
M. 3, {varioia . . . . .	*			EAST LONDON; St. Botolph.				F. 12 days, cyanosis . . . . .		*	
{dysentery (probably from want) . . . . .	*			M. 23, low putrid fever . . . . .		7 weeks		M. 10 wks., cleft palate and hare-lip—atrophy, from birth			
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.				F. 1, {fever . . . . .		14 days		Hernia:—			
				{thrush . . . . .		10 days		M. 60 ( <i>inquest</i> ), natural—died from neglected hernia when on his way for relief . . . . .		*	
				Cripplegate.				M. 79, hernia . . . . .		8 days	
M. 2, {small pox, natural (without previous vaccination . . . . .	16 days			WEST LONDON; North.				F. 85, {rupture . . . . .		many years	
{enteritis . . . . .	12 hours			F. 8, {fever . . . . .		5 days		{peritonitis . . . . .		1 day	
F. 2, small pox . . . . .	about 12 days			{gastritis . . . . .		1 day		F. 65, strangulated femoral hernia . . . . .		6 days	
F. 1, variola . . . . .	11 days			SHOREDITCH, St. Leonards.				F. 57, {umbilical hernia . . . . .		22 years	
M. 5 mon. (variola not vaccinated). . . . .	14 days			F. 59, typhus . . . . .		7 days		{operation . . . . .		3 days	
M. 3, variola, confluent (not vaccinated). . . . .	21 days			BETHNAL GREEN; The Green.				See Return of University College Hospital.			
M. 1, {small pox . . . . .	*			F. 30, typhus . . . . .		6 weeks		Diabetes:—			
{vaccination attempted 5 weeks before without success. . . . .	*			The Church.				F. 39, diabetes . . . . .		6 months	
F. 4 mon., {small pox . . . . .	16 days			M. 26, typhus malignant . . . . .		2 weeks		Stone:—No deaths registered from this cause.			
{first attack, not vaccinated. . . . .	*			WHITECHAPEL; North.				Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.			
F. 11 mon., small pox (not vaccinated) . . . . .	*			M. 71, synochus and infirmities of age . . . . .		*		F. 18, {childbirth . . . . .		19 days	
F. 1, small pox (not vaccinated). . . . .	9 days			M. 54, typhus . . . . .		*		{peritonitis . . . . .		6 days	
F. 2, {small pox (not vaccinated) . . . . .	12 days			F. 48, synochus—pericarditis . . . . .		*		F. 36, {childbirth . . . . .		8 weeks	
{pneumonia . . . . .	3 days			F. 33, synochus—dysentery . . . . .		*		{peritonitis . . . . .		3 days	
M. 1, small pox (first attack—not vaccinated) 1 week				F. 49, typhus . . . . .		*		F. 26, {childbirth . . . . .		*	
F. 2, small pox (not vaccinated) . . . . .	14 days			Church.				{puerperal fever . . . . .		9 days	
{small pox . . . . .	2 days			F. 7, brain fever . . . . .		*		F. 27, convulsions during and after labour . . . . .		1 day	
M. 26, {vaccinated in infancy—imperfect cicatrices. . . . .	*			Goodman's Fields.				F. 22, {childbirth . . . . .		16 days	
M. 1, small pox (not vaccinated). . . . .	*			M. 65, debility after convalescence from fever . . . . .		*		{acute rheumatism . . . . .		7 days	
F. 1, small pox (natural) . . . . .	9 days			ST. GEORGE in the East; St. John.				F. 29, abortion—syncope . . . . .		1 week	
M. 3 weeks, small pox (not vaccinated). . . . .	11 days			M. 28, effusion on the chest, consequent on fever . . . . .		*		F. 25, childbirth . . . . .		*	
F. 5, small pox (not vaccinated) . . . . .	*			STEPNEY; Ratcliff.				Delirium Tremens:—			
F. 1, variola . . . . .	*			F. 22 ( <i>inquest</i> ), natural death—sudden from convulsions after fever . . . . .		*		M. 44, delirium tremens . . . . .		10 days	
M. 7, confluent small pox (not vaccinated) . . 15 days				Mile End, Old Town, Lower.				F. 28, delirium tremens . . . . .		*	
M. 10 weeks, small pox (not vaccinated)—no medical attendant). . . . .	3 days			F. 62, fever . . . . .		10 days		See Return of St. Thomas' Hospital.			
M. 3, {small pox . . . . .	11 days			ST. SAVIOUR; St. Saviour.				Intemperance:—			
{vaccinated 24 years ago with effect. . . . .	*			F. 4, {typhus . . . . .		13 days		Foreman at a {intemperance . . . . .		*	
M. 5, small pox, confluent (not vaccinated) . . 10 days				{pneumonia . . . . .		10 days		livery-yard, 38, {delirium tremens . . . . .		4 days	
M. 3, confluent small pox (not vaccinated) . . 10 days				Christchurch.				F. 42 ( <i>post mort.</i> ), disease of liver and dropsy, induced by the use of alcoholic drinks . . . . .		*	
F. 1, small pox (not vaccinated—no medical attendant). . . . .	13 days			M. 36, typhus . . . . .		11 days		Privation:—			
F. 2, small pox (not vaccinated) . . . . .	11 days			ST. MARY MAGDALEN, Bermondsey; Leather Market.				In sub-district of Berwick-street, St. James, Westminster, F. 15 ( <i>inquest, p.m.</i> ), epilepsy, accelerated by low diet from poverty about 3 hours			
NOTE.—The last six cases of small pox occurred in the sub-district of St. Peter, Walworth.				M. 10, {erythematic fever . . . . .		3 weeks		In sub-district of Rectory, St. Marylebone, F. 4 ( <i>inquest</i> ), starvation and want of all the common necessities of life—manslaughter against Mary Ann Allen, her mother . . . . .		*	
				{hydrocephalus . . . . .		2 weeks		In sub-district of Gray's Inn Lane, sailor, 41 ( <i>inquest</i> ), sudden syncope from alarm at night, by an admission into a hospital ward, while he was in a fever from destitution . . . . .		*	
				{diffuse abscess . . . . .		1 week		In Ratcliff, F. 46 ( <i>inquest</i> ), natural death, which may have been accelerated by exposure to cold . . . . .		*	
				{anasarca . . . . .		about 15 days		See Return of St. Thomas' Hospital, see also Cases of Small Pox.			
				St. Mary Magdalen.				Want of Breast-milk:—			
				M. 54, fever; brain affection . . . . .		*		F. 5 wks., atrophy from want of breastmilk . . . . .		*	
				M. 20, fever; brain affection . . . . .		*		F. 3 wks., inanition from want of breastmilk 3 weeks			
				M. 3, typhus . . . . .		*		Purpura:—			
				St. GEORGE, Southwark; Kent-road.				M. 48, purpura . . . . .		*	
				F. 70, fever . . . . .		*		M. 10, internal hæmorrhage—purpura . . . . .		*	
				F. 50, fever—pneumonia—bronchitis . . . . .		*		Hæmatemesis:—			
				St. MARY, Newington; St. Peter, Walworth.				M. 51, hæmatemesis . . . . .		5 days	
				F. 65, fever . . . . .		7 days		F. 23, hæmatemesis . . . . .		3 days	
				Trinity.				F. 1, dentition—melæna . . . . .		*	
				M. 19, typhus . . . . .		*		Disease of Liver and Melæna:—			
				LAMBETH; Lambeth Church (1st part).				F. 69, {diseased liver . . . . .		— years	
				GREENWICH; East.				{melæna . . . . .		2 months	
				M. 18, fever . . . . .		20 days		Miscellaneous Causes:—			
				WANDSWORTH; Battersea.				F. 30, {tumor ovarii . . . . .		1½ year	
				M. 38, {fever . . . . .		7 weeks		{suppuration within the ovarian cyst. . . . .		1 week	
				{paralysis—diarrhoea . . . . .		*		(p.m.) {stomatitis . . . . .		3 days	
				Catarrhal Fever:—				F. 48, ovarian dropsy . . . . .		*	
				In Hoxton, {catarrhal fever . . . . .		7 days		F. 47, scirrhus—excision of tumour on the breast, followed on third day by peritoneal inflammation . . . . .		*	
				Old Town, {affection of brain, analogous to M. 47, {delirium tremens . . . . .		4 days		{disease of chest following the amputation of a mamma . . . . .		*	
				Infantile Remittent Fever:—				F. 37, {cystic sarcoma . . . . .		1 year	
				M. 5, infantile remittent fever . . . . .		5 months		F. 55, noli me tangere . . . . .		2 years	
				Syphilis:—				F. 14 (p.m.), adhesion of dura mater to skull—deposit of bone in dura mater—congestion and softening of brain . . . . .		*	
				F. 1, syphilis . . . . .		congenital		F. 47, menorrhagia . . . . .		*	
				F. 7 days, pemphigus syphilitic—born with eruption . . . . .		*					
				F. 26, fever, and secondary venereal disease . . *		*					
				F. 7 mon., syphilis . . . . .		*					
				F. 27, {fever . . . . .		3 days					
				{syphilis . . . . .		a long time					
				Hæmorrhage:—							
				F. 31 ( <i>post mort.</i> ), hæmorrhage through fallopian tube into the cavity of abdomen . . 30 hours							

\* Not returned till too late for insertion in the enumeration of the previous week.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 28; apoplexy, 4; disease of the heart, 3; privation, 4; other specified causes, 13; "natural death," "visitation of God," "found dead," &c. 11.—TOTAL, 63 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 35.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at 9h. a.m. At other examinations it was positive with moderate tension.		The sky was principally overcast until 9h. p.m., when the clouds became broken, and continued so during the remainder of the day.
MON.	At several examinations nothing was shewn. At other times it was positive but weak.		Generally overcast till 3h. p.m.. Cirrocumuli, fleecy clouds, and scud covered about two-thirds of the sky during the afternoon and evening.
TUES.	Nothing was shewn till 7h. a.m. From this time till 8h. p.m. it was positive, but weak. Nothing was shewn during the remainder of the day.		The sky was generally overcast throughout the day.
WED.	Nothing was shewn till 9h. a.m. Positive but tension weak during the remainder of the day.		Overcast till 8h. a.m. : about one-fifth of the sky was covered with cirrostratus, fleecy clouds, and scud from this time till 8h. p.m. Overcast during the remainder of the day. Fine rain was falling at about 3h. a.m.
THURS.	Positive and weak between noon and 6h. p.m. Nothing was shewn at any other times.		The sky was overcast till 2h. p.m., when it became cloudless, and continued so till 8h. p.m. Overcast afterwards till midnight.
FRID.	Nothing was shewn throughout the day, except at about 5h. 30m. p.m., when it was positive, but weak.		Generally overcast throughout the day.
SAT.	Positive and tension moderate from 1h. till 4h. p.m. Nothing was shewn at any other times.		Overcast till noon. From this time till 10h. p.m. the sky was generally clear, but it became overcast before midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 57°1; and the mean reading at 7h. 30m. P.M., was 62°1; the mean readings at the Royal Observatory for the same times were 56°9 and 61°8 respectively.

† The mean direction of the wind for the week is N. by E.

# Births and Deaths registered in London,

During the Week ending Saturday, July 10th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 27.

(The tabular abstract on the first page is for the week ending Saturday, July 10th. The following selection of cases is made from the returns for the week ending July 3d.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Bathing:—	duration
In St. George's Hospital, son of a carpenter, 6, (post mort.)—fractured skull and lacerated brain—fell down stairs	7 days	In St. George's Hospital, gardener's labourer, (age not reported)—post mort.—fell from the kerb, under a dray drawn by two horses, at Walham Green—leg struck by some part of the dray	13 days	Surgical pupil, 20, epileptic seizure, induced by going into a cold bath	a few minutes
In St. George's Hospital, M. (supposed to be a private in Bombay Artillery), 44 (post mort.), delirium tremens, following fracture of the skull and laceration of the brain—fell down the steps of the Great Western Railway terminus at Paddington, when intoxicated	5 days	In University College Hospital, cab driver, 44, injury of the foot, from a cab upsetting at night, at a part of Flask Walk, Hampstead, rendered dangerous to life by neglect of the authorities of the road	10 days	Hanging and Suffocation:—	
In St. George's Hospital, linen draper's assistant, 40 (post mort.), secondary abscess in the lung—compound fracture of right leg, produced during delirium tremens, after simple fracture. No evidence how the simple fracture was caused—supposed from a fall in Bond Street, when intoxicated	28 days	In University College Hospital, sweep, 62, suppurating of the thigh, which was fractured by a waggon wheel. Thrown under it by a horse, when trying to stop him down hill, the load being too heavy	21 days	F. 49, hanged herself in a temporary state of insanity.	
In University College Hospital, painter, 59, fracture of the skull and several ribs, caused by an accidental fall into the area of a house, where he was at work as a painter	*	In University College Hospital, railway porter, 29, injuries of the mesentery. Crushed by railway waggon buffers, when incautiously standing between them to remove a lamp	7 hours	F. 51, hanging herself by a cord to the rail of a bedstead, her feet not being off the ground (temporary insanity)	almost instant
In King's College Hospital, labourer, 42, inflammation and fever, following wound of the right foot. Fell into a cellar when pulling down an old house in Short's Gardens, Drury Lane—the arch of cellar suddenly giving way	4 days	In University College Hospital, labourer, 30, fracture of the bones of the thigh, and laceration of the muscles of the thigh, caused by the wheels of a steam carriage passing over his lower extremities	*	Sweep, 26, suffocation from hanging—suicide in unsound mind.	
In London Hospital, hutter, 67, accidental by a fall down stairs	*	In Guy's Hospital, labourer, 35, injury to the lower part of the back, from being accidentally struck by the step of a railway engine, when working on a side line	1 week	Shoemaker, 45, hanged himself with a strap to the handle of a cupboard door—found dead with his feet on the floor—temporary insanity.	
In London Hospital, engineer, 50, accidental by a fall from a ladder at East London Water Works	1 day	Labourer, 47, inflammation of the lungs, set up by a fractured rib—how caused unknown	*	Wife of a servant, about 43, suicide by hanging herself during intoxication (an habitual drunkard).	
In Guy's Hospital, son of a shoemaker, 15, mortification from a fracture of the left leg, occasioned by an accidental fall from a tree, while taking sparrows' nests	23 days	Assistant to a frameworker (age not reported), post mort.—fracture of 2nd cervical vertebra—found dead—the framework of a steam saw mill resting upon his neck, supposed to have dropped upon it (after the engine had been stopped) by the crank being moved, from his playfully placing his head through a hole communicating with the crank	instant	M. 39, asphyxia—hung himself with a towel to a bedrail, in temporary insanity (found dead).	
F. 3, compression of the brain, by falling from a three-pair window (45, Carnaby Street), when at play in the window seat	*	F. 76, { general paralysis	*	F. about 59, accidental suffocation and congestion of the brain from lying in the passage intoxicated, with her head against the wall, and pressing on her chest (found dead).	
F. 42 (post mort.), injuries of the head from being knocked down stairs by her husband, and falling on a pavement (manslaughter against Thomas Marlin)	3 days	F. 61 (no inquest), fracture of femur	16 days	M. 3 days (post mort.), suffocation by a shawl and bed clothes—wilful murder against Ann Cleveland and a man known as Hill, otherwise Dolly—found dead in bed with his mother.	
Daughter of a cab proprietor, 8 mon., dislocation of the neck—was let slip from the lap of a child, when the edge of the chair fell on her neck	5 minutes	F. 61 (no inquest), disease of the brain, and concussion of the head	2 days	In London Hospital, M. 28, sudden from suffocation.	
Daughter of a coach painter, 3, fractured skull and compression of the brain, by falling from the first-floor window of 65, Dean Street, Soho, when at play	about 15 mins.	Wounds:—		The above return is imperfect, and of doubtful import—From violence or disease?	
Bricklayer, 63, falling down stairs, causing rupture of a blood vessel of the brain	immediately	In St. George's Hospital, wife of a copying clerk, 47, cutting her throat with a razor (in temporary insanity from painful disease)	3 days	Daughter of a porter, 1 mon., asphyxia accidentally caused, when laid to sleep in her mother's arms in bed—found dead in bed.	
M. 49, natural—may have been accelerated by a fall	sudden	In London Hospital, labourer, 21, accidental from the explosion of a congre rocket	2 days	M. a few minutes, suffocation in the soil of a privy, by falling therein at birth.	
In London Hospital, labourer, 28, leg crushed by the accidental fall of iron pipes in Goulston Square	23 days	In Guy's Hospital, M. 29, { puncture of knee joint	3 days	Burns and Scalds:—	
In University College Hospital, carpenter, 31, injuries of the legs and body, from brick arches falling in through the cement being deranged by frost, snow, and thaw	10 days	(post mort.—no inquest) { syncope	heart dilated.	In University College Hospital, widow of a bleacher, 63, burns from lucifer matches setting fire to her clothes, while in a fit or intoxicated	3 months
In University College Hospital, plough boy, 12, crushed by a waggon wheel, having fallen off the waggon when asleep	2 hours	M. 28, cutting his throat with a razor, in temporary insanity	a few minutes	In London Hospital, son of a coalwhipper, 8, accidental from burns	*
In University College Hospital, jobmaster about 67, injuries of the head by falling from a horse break. The firing of the troops in Hyde Park made the horses run away, and he was jolted off	3 hours	In King's College Hospital, papier maché maker, gangrene after amputation of the right arm, which had been drawn into and lacerated by the iron roller of a grinding machine, worked by steam at Mr. Bielefeld's papier maché manufactory, Wellington Street—(deceased playing with machinery)	10 days	Son of a collector to a company, 4, burns from his clothes taking fire at a grate, at which he stood on a fender	*
Son of a coffee-house-keeper, 3, fracture of the skull from being run over by a cart, as he was running across Fetter Lane	instant	Brass founder, 54, cutting his throat with a pocket knife in temporary insanity, caused by erysipelas of the face and head	40 hours	F. 44, accidentally burnt about the head, arms, and body, from falling, when intoxicated, against the fire in a room in which she was alone (found dead).	
M. 7, accidentally crushed to death by a cart wheel	*	Drowning:—		M. 4, hooping cough, and effects of injuries, from being burnt accidentally	*
M. 12 (post mort.), rupture of the liver and vena cava, from being run over by a cart furiously driven by a man unknown	15 mins.	M. 24, found drowned in the River Thames—no evidence how he came into the water.		F. 1, accidental death from scalds, by boiling broth falling on her chest	6 weeks
In St. George's Hospital, carrier, 22 (post mort.), hæmorrhage from laceration of right lung, from fractured ribs. Fell from a carrier's cart, and run over by the wheel, when endeavouring to stop a box from falling (at Knightsbridge)	2 hours	Carpenter, 36, drowning—not known how he came into the water—had chronic disease of the cerebral membranes (probably suicide).		M. 4, scalds from a pot upset with boiling water, which went on his legs, thigh, and abdomen	
		M. 17, accidentally drowned, when bathing.		Daughter of a carman, 3, effects of an accidental scald on the nates	
		Waterman, 26, drowning himself in the River Thames, in temporary insanity (under water 3 days).		Poison:—	
				In St. George's Hospital, gardener, 48 (post mort.), laudanum—suicide in temporary insanity	about 8 hours
				Wife of a coachman, 30 (post mort.), laudanum—taken for tooth ache (found dead in bed)	*
				In University College Hospital, landress, 33, arsenic (4 drachms), suicide—state of mind unknown	23 hours
				In King's College Hospital, son of a cab proprietor, 1 (post mort.), arsenic contained in bug oil, taken unobserved by his parents	about 5 hrs.
				F. 69, poisoned herself in a temporary state of insanity	*

**THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.**  
NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

{ erysipelas of lower extremities. ....	*
F. 57, { hernia, femoral. ....	*
{ operation. .... 1 month	
{ erysipelas—phlebitis. .... 7 days	
M. 35 (post mort.), peritonitis and abscess of liver. ....	*
M. 53 (post mort.), granular kidney—fistula—diffused cellular inflammation about rectum	*
M. 26, malignant disease of testis and liver ..	*
M. 54, renal dropsy. ....	*
M. 78, ossification of the arteries. ....	*
F. 33, obstructed bowel—perforation. ....	*
F. 30, phthisis—hæmoptysis. ....	*

**Dreadnought H.:**

M. 21, { pneumonia. .... 7 days	
(post mort.) { consequent on intemperance—very rapid decomposition. ....	*

M. 24, { phthisis. .... 3 months	
(post mort.) { pneumothorax and empyema, consequent on rupture of a vomica 2 weeks	

**Hæmorrhage (continued):**

Son of a single woman, newly born (inq., post mort.), hæmorrhage from the navel string (after unexpected birth) having been cut with scissors—said to have been held by a female—string not tied for half an hour, when medical assistance arrived—general bloodless state of body. ....	about 1½ hour
--	---------------

M. 60 (inquest), rupture of a blood-vessel of the thorax (natural). ....	5 minutes
--	-----------

Other cases of hæmorrhage are classed under apoplexy, phthisis, &c.

**Malformation.**

F. 4 days, malformation. ....	*
-------------------------------	---

**Hernia:**

F. 78, { irreducible hernia. .... many years	
{ constipation. .... 9 days	
M. 66 (post mort.), internal strangulated hernia, 4 days	

See Guy's Hospital Returns.

**Disease of Kidney, Diabetes, &c.**

M. 63, disease of kidney, prostrate gland; diabetes. ....	1 year
---	--------

**Stone:**—No deaths registered from this cause.

**Childbirth:**—The time elapsing from commencement of labour to death should invariably be returned.

F. 26, { abortion (in third month). .... 11 days	
{ peritonitis. .... 9 days	
F. 33, hæmorrhage; exhaustion after parturition *	
F. 29 (inquest), natural death—exhaustion after miscarriage. ....	*

See Return of Charing Cross Hospital.

**Delirium Tremens:**

M. 39, delirium tremens—debility—anasarca, 3 months	
M. 44, delirium tremens. ....	5 days

See Return of St. George's Hospital.

**Intemperance:**

F. 34 (inquest), found dead in bed—apparently from intoxication. ....	*
F. 29 (inquest), natural death, accelerated by drinking ardent spirits. ....	*

See Dreadnought Hospital Ship.

M. 42 (inquest), natural—suddenly seized with pain in the side, and died in half an hour—was a drunkard.	*
--	---

**Privation:**

In Limehouse, F. 4 (inquest), natural death—accelerated by want and privation. ....	*
---	---

See Return of University College Hospital.

**Want of Breast-milk:**

F. 5 weeks (p.m.), bowel irritation from deficient supply of milk. ....	2 weeks
---	---------

F. 9 mon., atrophy from weaning. ....	*
---------------------------------------	---

Son of a single woman, 8 mon., (inq.) natural death from atrophy and wasting, being deprived of his natural aliment. ....

F. 3 mon., { from an attempt to bring up by haud (the mother a wet nurse). ....	*
{ intestinal irritation. .... 6 days	

M. 6 days, debility from want of breast-milk. ....	*
--	---

M. 9 weeks, { want of breast milk. ....	*
{ convulsions. ....	*
{ diarrhoea. .... 8 days	

**Purpura, &c.:**

F. 19, { mucro-enteritis. .... 4 days	
{ purpura hæmorrhagica. .... 2 days	
M. 72, { scorbutus. .... 1 month	
{ atrophy, gradual. ....	*

**Hæmatemesis:**

M. 75, hæmatemesis—old age. ....	*
----------------------------------	---

Other cases of Hæmatemesis, classed under primary disease:

M. 62 (p.m.), ulceration of the stomach—hæmatemesis. ....	*
---	---

F. 26, { chronic hepatitis. .... several years	
{ hæmatemesis. .... 6 months	

**Miscellaneous Cases:**

M. 34, fever following the operation of tying piles 3 weeks	
---	--

F. 62, { excitement. ....	*
{ convulsions. .... 2 days	

F. 43 (inquest), sudden death from a fit caused by excitement. ....	*
---	---

F. 76, old age—mental shock. ....	*
-----------------------------------	---

F. 17, lupus excelsus. ....	9 months
-----------------------------	----------

M. 6 weeks, strophulus confertus. ....	3 weeks
--	---------

F. 78 (inquest), natural death from the visitation of God; with a recommendation to medical officers promptly to attend to orders.	
--	--

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 10th July, 1847.

Day.	Phase of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																	
			Dry			Dew Point	Highest in the sun, as shown by a self-regis- ter- ing Thermometer	Lowest on the grass, as shown by a self-regis- ter- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12 Days	Greatest	Least	General Direction			Pressure in lbs. on the square foot		Mean of 12 Obs.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at 9h. a.m. At other examinations it was positive with moderate tension.		Cumuli, cirri, and light clouds scattered about the sky during the day.
MON.	Nothing was shewn till 7h. a.m. From this time till 5h. 30m. p.m. it was positive with strong tension. During the remainder of the day nothing was shewn.		The sky was generally cloudless till 2h. p.m.; mostly cloudy from that time till 6h. p.m., and nearly cloudless during the remainder of the day.
TUES.	The apparatus was under repair during the day.		With the exception of a few cirri and fleecy clouds which prevailed during the afternoon, the sky was generally cloudless throughout the day. Flashes of sheet lightning were occasionally visible from 6h. 30m. p.m. till midnight
WED.	The apparatus was out of order till 9h. a.m. Throughout the remainder of the day it was positive, with moderately strong tension.		The sky was overcast till 6h. p.m., but generally cloudless during the remainder of the day. At about 6h. 15m. a very violent thunder storm occurred. It began first in the S.E. and from S.E. to N.E. The thunder followed the lightning at intervals from 6 sec. to 1 min. The rain ceased at about 1h. 30m. a.m., but the lightning was visible behind clouds in the North till 4h. a.m. From 6h. 45m. till 1h. 10m. the thunder and lightning were almost incessant. At 6h. 40m. a sudden gust of wind to 2lb. 5 pressure on the square foot, was recorded by the anemometer immediately before; after which it was nearly calm.
THURS.	Positive and tension variable throughout the day, with the exception of 6h. 5m. p.m., and midnight, when nothing was shewn.		Overcast till 2h. p.m., and about one-third covered with cumuli, cirrostratus, and haze during the remainder of the day. Rain was falling at intervals during the morning.
FRID.	Nothing was shewn till 9h. a.m. Throughout the remainder of the day it was positive, with variable tension.		The greater part of the sky was covered with cumuli, cirrostratus, and sand throughout the day.
SAT.	Positive and tension moderate throughout the day.		The sky was mostly overcast till 6h. p.m., but cloudless during the remainder of the day.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 61°6; and the mean reading at 7h. 30m. P.M., was 69°3; the mean readings at the Royal Observatory for the same times were 59°7 and 68°1 respectively.

† The mean direction of the wind for the week is S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, July 17th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 28. (The tabular abstract on the first page is for the week ending Saturday, July 17th. The following selection of cases is made from the returns for the week ending July 10th.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

duration	duration	duration
Fractures and Contusions:—	Fractures and Contusions (continued):—	Drowning:—
In St. Bartholomew's Hospital, bricklayer, 47, fracture of the skull, caused by an accidental fall from the roof of a house into the street about 1 hr.	Baker, 62, injuries received by being accidentally thrown from his cart ..... 7 days	M. 22, accidentally drowned whilst bathing in the water of the River Lea.
M. 72 (no inquest), broken rib from a fall—inflammation of the pleura, with effusion ... 4 days	In St. Bartholomew's Hos- { rupture of urethra pital, M. 40 (no inquest), { extravasation of urine.	M. 15, found dead in the water of the River Lea—how caused unknown.
F. 2 (no inquest), convulsions, from concussion arising from a fall in a passage ..... 7 days	Query—Was rupture caused by accident, or was it the result of disease?	Wife of a labourer, about 42, found dead in the River Thames.
In St. Bartholomew's Hospital, daughter of a brewer's servant, 1, compound fracture of the left leg, caused by a piece of timber accidentally falling upon it—leg amputated 6 days	In University College Hospital, M. 95 (no inq.), fracture of finger, followed by inflammation of absorbent of the arm ..... *	Driver in the Royal Horse Artillery, 18, accidentally drowned in the River Thames, whilst bathing.
In Westminster Hospital, clerk to a wine merchant, 62 (post mort.), shock and hæmorrhage—compound fracture of left thigh, from being knocked down and run over by a timber cart, drawn by one horse, on Westminster Bridge. The horse shied on to the foot pavement ..... 37 hours	M. 8 (no inquest), injury of the spine—abscesses of the back ..... 2 years	Hanging and Suffocation:—
In Charing Cross Hospital, son of a shoemaker, 7, internal injuries from his having been run over by an omnibus—having run against the horses, when crossing the carriage road at Charing Cross. .... about 45 minutes	Wounds:—	M. about 55, suicide by hanging—found suspended by the neck to a tree in a field—no evidence of identity or state of mind.
F. 1, bruises from the wheels of a phaeton passing over her loins accidentally ..... 2 hours	In Charing Cross Hospital, brass finisher, 36, (post mort.)—stah with a table knife, which entered between 8th and 9th ribs, passing through left lung and diaphragm into the stomach. Fluid contents of the stomach escaped into the chest. Manslaughter against Mary Ann Granton, alias Mary Ann Maids, with whom he cohabited (supposed to be his wife) ..... 33 hours	M. (newly born), post mort.—wilfully murdered at the birth, by strangulation by persons unknown.

### FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

duration	duration	duration
St. George's II:—	Middlesex II:—No deaths registered.	University College II. (continued):—

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.		The sky was generally overcast with thin cirrostratus till about 7h. p.m., and cloudless during the remainder of the day.
MON.	Positive and tension generally weak till 9h. a.m. Tension strong during the remainder of the day.		The greater part of the sky was cloudless, but hazy throughout the day.
TUES.	Positive and tension moderate throughout the day.		The sky was mostly cloudless, but very hazy, particularly in the north, throughout the day, except from about noon till 6h. p.m., when detached cumuli covered one-half of the sky.
WED.	Nothing was shewn till 6h. a.m. Positive and tension strong from this time till 9h. p.m. Nothing was shewn during the remainder of the day.		Cloudless but hazy till 2h. a.m.; from 7h. till 10h. a.m.; and from 9h. p.m. till midnight. A thin cirrostratus and haze generally covered the sky at other times.
THURS.	Positive and tension generally strong, from 9h. a.m. till 10h. p.m. Nothing was shewn at any other times.		Cloudless but hazy till 2h. a.m., and from 1h. p.m. till 6h. p.m. At other times the sky was mostly covered with cirrostratus. A fog prevailed from 5h. to 7h. a.m.
FRID.	Positive and tension moderate from 9h. a.m. till 10h. p.m. Nothing was shewn at any other times.		Overcast till 4h. a.m. The greater portion of the sky was free from cloud during the remainder of the day.
SAT.	Negative and very active from 3h. 25m. a.m. till 4h. 10m. a.m. Sparks were frequent, and galvanic current were shewn. Strong positive and occasionally negative from 9h. a.m. till noon. Sparks were frequent, and galvanic current were shewn. Positive and tension moderate from this time till 10h. p.m. Nothing was shewn at any other times.	<div> A thunder storm. </div> <div> Rain falling. Thunder heard in N.E., E. &amp; S.E. </div>	Overcast throughout the day. At 3h. 25m. a.m. a thunder storm occurred, which lasted till 4h. 15m. a.m. The thunder was heard mostly in the W. and N.W. Rain was falling very heavily during the storm. Rain was also falling from 9h. a.m. till 6h. 30m. p.m., between which times another thunder storm occurred; the thunder was heard in the N.W. and N., passing to the S.E.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed were opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 64.8; and the mean reading at 7h. 30m. P.M., was 72.4; the mean readings at the Royal Observatory for the same times were 63.7 and 71.8 respectively.

† The mean direction of the wind for the week for the first two days was W.S.W.; the air was principally calm during the three following days, and the direction was E. & N. on the two remaining days.

# Births and Deaths registered in London,

During the Week ending Saturday, July 24th, 1847.

ANNUAL SERIES VIII.]

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 29.

(The tabular abstract on the first page is for the week ending Saturday, July 24th. The following selection of cases is made from the returns for the week ending July 17th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.  
NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

*Fractures and Contusions:—*  
Brewer's servant, 49, accidental death by a fall from a waggon, and broken ribs ..... 7 months  
M. 67 (no inquest), fractured thigh ..... 2 months  
It should be stated in all cases how injury was caused.

M. 81, { fractured leg. .... 2 months  
(no inquest) { sloughing ..... 2 weeks  
F. 4, { irritative fever ..... 2 weeks  
(no inquest) { spinal injury, cervical ..... 9 months  
              { paralysis .....

*Wounds:—*  
F. 50 (no inquest), punctured wound of the abdomen, penetrating the thorax ..... \*  
M. 59, { incised wound ..... \*  
(no inquest) { erysipelas ..... 5 days  
                  { inflammation of head and throat.

*Drowning:—*  
Plasterer, 33, drowned himself—insane.  
Labourer to a gardener, 13, drowning—not known how he came into the water—but had suddenly disappeared after detection in a fraud.  
M. 18, east himself into the water of the River Lea, in a temporary state of insanity.  
Tailor, 62, found dead without marks of violence in the Regent's Canal—apparently drowned.  
Waterman, 24, brain fever, resulting from accidental immersion in the River Thames, by a steamboat coming in collision with a wherry, wherein deceased was ..... \*  
M. 12, drowned by accidentally falling off a barge into the River Thames (under water 2½ hours).

*Hanging and Suffocation:—*  
Shoemaker, 64, suicide by hanging himself from a bedpost (being in a state of mental derangement) ..... 3 hours  
M. 46, suicide by hanging himself to a bedpost (being of unsound mind).  
M. 66, accidentally choked with beef and pudding .....

*Burns and Scalds:—*  
Son of a labourer, 4 (no inquest), burns on the neck, chest, stomach, and upper extremities, from his clothes taking fire accidentally ..... 4 months  
convulsions ..... 3 weeks  
F. 3 (no inquest), scalded throat ..... 4 days

*Poison:—*  
Daughter of a leather-dyer, 1, inflammation of the mouth and throat, by drinking spirits of hartshorn accidentally ..... 3 days  
F. 6 mon., accidental by the administration of a quantity of syrup of poppies, accidentally supplied for syrup of buckthorn .....

THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.  
NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

*St. George's H.:—*  
M. 30, { aneurism of the ascending aorta. .... about 2 years  
(p. m.) { phthisis pulmonalis ..... \*  
M. 25, abscess of the back ..... \*  
M. 35, { malignant ulceration of the uterus ..... \*  
(p. m.) { and vagina ..... \*  
F. 20, consumption ..... \*

*Westminster H.:—*  
M. 63, fever ..... 3 weeks  
M. 32, typhus, petechiæ ..... 24 days  
M. 31, phthisis pulmonalis ..... -months  
F. 23, fever ..... \*  
F. 50, typhus ..... 21 days  
M. 66, phthisis pulmonalis ..... -months  
F. 57, profuse epistaxis supervening great chronic disease of central arteries and aorta; and central congestion ..... 10 days

*Charing Cross H.:—*No deaths registered.  
*Middlesex H.:—*  
M. 3, croup ..... 12 hours  
M. 68, stone in the bladder ..... \*  
F. 62, ascites ..... \*  
F. 52, phthisis ..... \*

*University College H.:—*No deaths registered.

*Fever H.:—*  
M. 52, { bronchitis ..... long standing  
          { from East London Union.  
M. 17, { fever ..... about 14 days  
(p. m.) { inflammation of the arachnoid and pia mater of the convex surface of the brain—in hospital 11 days.  
M. 29, { dysentery ..... long standing  
(p. m.) { serofulous peritonitis & pleuritis, from St. Pancras—in hospital 22 days.

*Small Pox H.:—*  
F. 48, { smallpox, confluent ..... \*  
          { vaccinated in early life at Hatfield; two large smooth cicatrices.  
F. 4, smallpox, confluent (unprotected) ..... \*  
M. 3 months, smallpox, confluent (unprotected) .....

*King's College H.:—*  
M. 39, phthisis ..... 7 months  
*St. Bartholomew's H.:—*  
M. 67, purpura and disease of the liver ..... \*  
M. 38, fever ..... \*  
M. 33, exhaustion consequent upon a long-continued and profuse suppuration in the gluteal region ..... \*  
M. 24, hæmoptysis—phthisis ..... \*  
M. 36, purpura and disease of the liver ..... \*  
F. 19, phthisis ..... \*  
F. 8, ulceration of intestines—tubercular disease of the mesentery .....

THIRTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued).—

London H.:-

M. 29, paralysis	18 months
M. 29, abscesses	*
F. 6, diseased spine	*
F. 54, hernia	*

St. Thomas' H.:-

F. 9, suppression of urine after scarlatina	*
F. 26, fever	14 days
M. 43, apoplexy	5 hours
M. 27, typhus	14 days
M. 41, { chronic peritonitis.	5 months
{ stricture of colon.	

duration

Guy's H.:-

M. 40, (p.m.) aneurismal dilatation of aorta	6 months
M. 64, malignant melanosis	*
M. 14, { caries of occipital bone	12 weeks
(p.m.) { encephalitis	5 days
{ calculus	*
M. 65, { lithotomy	*
{ sloughing and peritonitis	*
F. 29, { acute rheumatism	*
(p.m.) { sloughing on sacrum and trochanters	*
{ gastro-enteritis	*
F. 28, { malignant disease of the skin of left leg	3 months
{ malignant disease of pleura	*
{ hydrothorax-bronchitis	10 days

Dreadnought H.:-

M. 35, { typhus with copious eruption	3 weeks
(p.m.) { hemiplegia (right)	65 hours
{ softening of the left corpus striatum,	
{ and middle lobe of brain.	
M. 35, { febrile symptoms at sea	7 weeks
{ acute dysentery	11 days
{ syphilitic ulceration of the throat	4 months
{ urgent dyspnoea, laryngotomy	30 days
{ unable to swallow—fed by the ceso-	
(p.m.) { phageal tube	21 days
{ double pneumonia	5 or 6 days
{ necrosis of the thyroid cartilage.	

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, ETC.

Small Pox:-

duration

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

M. 1, small pox (unprotected)	8 days
M. 1, { small pox (not vaccinated)	7 days
{ had recently arrived from Ireland.	
M. 3, { small pox	*
{ vaccinated with effect at 9 months.	
M. 14 weeks, small pox (natural)	12 days
F. 3 mon, variola (natural)	12 days
F. under 1, { confluent small pox	14 days
{ vaccinated 3 weeks ago.	
F. 27, { confluent small pox (with petechiæ)	6 days
{ first attack—whether vaccinated could	
{ not be ascertained.	
F. 10, { variola maligna	10 days
{ vaccinated with effect when 3 months	
{ old.	
M. 2, { small pox	9 days
{ vaccination doubtful.

See Hospital Returns.

Ague:-

M. 67, { ague, quartan	*
{ pneumonia	15 hours

Dentition and fever:-

F. 1, dentition—infantile intermittent fever	6 weeks
--	---------

Remittent Fever:-

M. 7, remittent fever	*
M. 4, { remittent fever	15 days
{ continued fever	3 days

Syphilis:-

M. 5 mon, syphilitic symptoms	duration from birth
M. 11 days, syphilis—atrophy	from birth

See Return of Dreadnought Hospital.

Hæmorrhage:-

M. 31, (ing.) natural death—sudden from rup-	*
ture of a blood-vessel	
M. 1 hour, hæmorrhage	1 hour

Malformation:-

A child (sex doubtful) 1 hour, malformation (no	
sexual organs)—imperforate anus.	
M. 13 days (post mort.) imperforate rectum.	
M. 1, { congenital pulmonary deformity.	from birth
{ marasmus	
M. 24, malformed brain—imbecility—generally	
deficient power.	

Hernia:-

F. 56, { strangulated umbilical hernia	*
{ operation	16 hours
F. 73, hernia—fever	5 weeks
M. 3 days, strangulated intestines	*

See Return of London Hospital.

Diabetes:-

No deaths registered from this cause.	
---------------------------------------	--

Stone:-

M. 62, { urinary and biliary calculi	14 days
{ jaundice	*

See Returns of Middlesex and Guy's Hospitals.

Childbirth:-

The time elapsing from commencement	
of labour to death should invariably be returned.	
F. 42, { parturition	4 days
{ peritonitis	4 days
F. 36, { labour	*
{ flooding	9 hours
F. 33, { childbirth—metris—peritonitis	*
{ femoral hernia	of long standing

Disease, hæmorrhage from the womb, &c.:-

F. 41, { hypertrophy of the heart and chronic	3 years
{ bronchitis	7 weeks
{ confinement	9 months
F. 46, hæmorrhage from the womb	9 months

Delirium Tremens; Intemperance; Privation:-

No deaths registered from any of these causes.	
--	--

Want of Breast-milk:-

F. 4 mon, exhaustion from being brought up	*
by hand	
M. 6 wks, anaemia from dry nursing	from birth
F. 3 mon, { asthma	from birth
{ wasting away from want of the	
{ mother's milk	2 months
F. 3 mon, atrophy from want of breastmilk	*

Purpura:-

M. 10 mon, { pneumonia	6 weeks
(post mort.) { purpura	1 week

See Return of St. Bartholomew's Hospital.

Hæmatemesis:-

F. 53, hæmatemesis	*
M. 60, hæmatemesis	10 days
F. 64, hæmatemesis—gradual anaemia (confined	
to bed 3 weeks)	*

Miscellaneous Causes:-

M. 33 (inquest), phthisis and inflammation of	
the pleura, and disease of the heart, during	
which he was sent to prison for 21 days,	
and hard labour, for refusing to work at the	
Kensington Workhouse. Died 6 weeks	
after coming out of the House of Correction.	

obstruction of the bowels, with	
peritonitis	3 days
F. 21, { old adhesion of the colon—adhe-	
(post mort.) { sion of the vermiform process	
{ to the fundus of the uterus—	
{ disease of the right ovary—re-	
{ cent adhesions of the omentum.	
{ obstruction of the bowels	9 days
{ resulting from previous inflamma-	
{ tion.	
M. 43, { strangulation caused by a fibrous	
(post mort.) { band, encircling the bowels.	
{ gallstone impacted in appendix cæci.	
M. 11, { vermiformis	34 hours
{ peritonitis	*
M. 49, { malignant stricture of the ceso-	
(post mort.) { phagus	about 2 years
{ perforation of the trachea, with	
{ extensive bronchitis	16 days
M. 52, medullary sarcoma of the testicle, ter-	
minating in fungous hæmatodes	probably 2 years
F. 24, { phthisis	2 years
(post mort.) { pneumothorax occurred, and caused	
{ death in	an hour or less

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 12; disease of the heart, 2; other specified causes, 9; "natural death," "visitation of God," "found dead," &c., 4.—TOTAL, 27 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 23.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.		Generally overcast till the evening, when the clouds cleared off.
MON.	Nothing was shewn till 8h. a.m. Positive and tension moderate during the remainder of the day.		The sky was about one-half covered with cloud till 3h. a.m., and overcast during the remainder of the day. Fine rain was falling occasionally at about noon. Sheet lightning was frequently visible till 4h. a.m.
TUES.	Positive and tension generally strong throughout the day.		About two-thirds of the sky were covered with cloud till 3h. a.m. Overcast with cumulostrati, thin cirrostratus and scud during the remainder of the day. A faint solar halo was visible at about 10h. a.m. and 2h. p.m.
WED.	Positive and tension generally weak throughout the day.		Overcast till 5h. p.m. Detached cumuli, cirri, and light clouds covered about one-fifth of the sky during the remainder of the day.
THURS.	Nothing was shewn till 2h. p.m. Positive and tension moderate during the rest of the day.		Generally overcast till 5h. p.m., but nearly cloudless during the remainder of the day. Fine rain was falling occasionally during the morning.
FRID.	Positive and tension strong throughout the day.		Cumuli, cirrostratus, and scud covered about one-half of the sky from 8h. a.m. till about 8h. p.m. At other times it was cloudless.
SAT.	Positive and tension strong throughout the day.		Mostly cloudless till 9h. a.m. Cumulostrati, cirrostratus, and fleecy clouds generally covered the sky during the remainder of the day. A faint solar halo was occasionally visible from 5h. till 5h. 30m. p.m., and a perfect lunar halo was seen at about 10h. 30m. p.m.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 59.1; and the mean reading at 7h. 30m. P.M., was 66.8; the mean readings at the Royal Observatory for the same times were 57.4 and 65.7 respectively.

† The direction of the wind for the week has been variable.

Births and Deaths registered in London,

During the Week ending Saturday, July 31st, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at any examination throughout the day.		Cirrostratus and scud generally covered the sky till towards evening, when it became nearly cloudless.
MON.	Nothing was shewn till 8h. a.m. Positive and tension occasionally strong dur- ing the remainder of the day.		The sky was mostly cloudless till 9h. a.m., and about one-half covered with cumuli, cirri, and cirrostratus from that time till 11h. p.m., when it became overcast.
TUES.	Nothing was shewn till 6h. a.m. Positive and tension moderate during the rest of the day.		About seven-tenths of the sky was covered with cirrostratus and scud till 2h. a.m. A small portion of the sky was covered with cirrostratus, detached cumuli, and fleecy clouds during the remainder of the day. It was occasionally cloudless. At 1h. 30m. a.m. the arc of a faint lunar halo was visible.
WED.	Positive and tension very uniform throughout the day.		Nearly cloudless till 4h. a.m. The sky was generally covered with thin cirrostratus, fleecy clouds and scud during the remainder of the day.
THURS.	Positive and tension generally weak throughout the day.		Mostly overcast till 9h. a.m., and from 5h. till 8h. p.m. At other times the sky was cloudless.
FRID.	Slightly positive till 2h. a.m. Nothing was shewn from this time till 7h. a.m. Positive and tension generally strong dur- ing the remainder of the day.		The sky was cloudless till 5h. a.m. Cirrostratus and scud covered the greater part of the sky from this time till towards midnight, when it became cloudless.
SAT.	Positive and tension weak till 8h. a.m. During the remainder of the day the ten- sion was variable, and frequently very strong.		The sky was generally clear throughout the day, with the exception of the afternoon, when portions of cirrostratus and light clouds prevailed.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 58.4; and the mean reading at 7h. 30m. P.M., was 69.3; the mean readings at the Royal Observatory for the same times were 58.6 and 68.4 respectively.

† The direction of the wind for the week has been variable.

# Births and Deaths registered in London,

During the Week ending Saturday, August 7th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 31. (The tabular abstract on the first page is for the week ending Saturday, Aug. 7th. The following selection of cases is made from the returns for the week ending July 31st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
Son of a carpenter, 8, fracture of the skull, by falling when playfully walking upon the wall adjoining the steps at the foot of Waterloo-bridge .....	10 days	Cowboy, about 17, (post mort.) fracture of the skull and laceration of the brain—fell when riding astride a tub in a wascart drawn by one horse, in King's-row, Pimlico, and run over by the wheel of the cart .....	a few minutes	Son of an engineer, 11, found dead, apparently drowned—without marks.	
In University College Hospital, F. 2, (no inq.) injury to the head from a fall .....	*	In St. Bartholomew's Hospital, son of a carpenter, 15, (post mort.) fractured skull from having been thrown from a horse at Holloway, in consequence of some boys throwing stones at it .....	about 30 minutes	Mate of the schooner 'Thomas,' of Sunderland, 50, drowned by falling into the Surrey canal dock accidentally (under water 8 hours).	
In St. Bartholomew's Hospital, coachman about 33, (p.m.) fracture of the skull by falling from a loft, having missed the ladder .....	16 days	M. 3, accidentally run over by a cart, which crushed his head .....	instantly	M. (person unknown) 18, found drowned in the River Thames—no marks of violence—no proof by what means he came into the water (in the water 2 days).	
In St. Bartholomew's Hospital, labourer about 21, fracture of his left leg by the flooring of a house giving way at Glasshouse-yard, Aldersgate-street, the accident producing fever in his debilitated constitution .....	14 days	In St. Thomas' Hospital { scirrhus in the liver M. 40, (no inquest) { from a blow .....	*	M. about 18, (person unknown) found drowned in the river Thames, by what means no proof (in the water about 5 days).	
In St. Bartholomew's Hospital, tailor, 29, (post mort.) rupture of his bladder by a fall and a blow—extravasation of urine into the abdomen—peritonitis .....	55 hours	jaundice .....	4 months	Son of a waterman, 11, accidentally drowned by falling out of a boat into the river Thames (in water 5 hours).	
In St. Bartholomew's Hospital, shopman, 41, (p.m.), fracture of his skull and laceration of his brain by falling through an opening into a cellar, whilst raising a box of lamps at Newgate-street .....	3 days	Wounds:—		Hanging and Suffocation:—	
In St. Bartholomew's Hospital, printer, 43, (post mort.), rapid mortification of his right arm accelerated by inflammation from a wound of his scalp caused by a fall at Hungerford Market .....	2 days	In St. George's Hospital, carpenter, 39, cutting his throat with a penknife when of unsound mind .....	8 days	Widow of a captain in the merchant service, 52, strangled herself with a piece of list, and cut her throat with a knife whilst in a temporary state of insanity .....	*
In St. George's Hospital, silversmith, 48, (p.m.) rupture of the small intestines—fractured ribs—knocked down and run over by an omnibus—ran against the off horse when crossing the road at Knightsbridge .....	14 hours	In University College Hospital, labourer, 53, (no inquest), extensive abscess under the pectoral muscles from wound of the finger .....	*	Burns and Scalds:—	
In St. George's Hospital, coachman, 31, compound fracture of left leg—run over by an omnibus from which he fell when driving, being seized with giddiness (in King's-road-Chelsea), supposed secondary abscess in lungs .....	35 days	M. 42, shot himself with a pistol in a temporary state of mental derangement .....	*	In St. George's Hospital, daughter of a single woman, 2, burns of the back and shoulders—clothes took fire when left alone; supposed to have been playing with lucifer matches .....	26 hours
		Drowning:—		In St. Bartholomew's Hospital, daughter of a smith, 20, burned by falling in the fire in a fit (at Red Lion Market, St. Luke's) .....	10 months
		Son of a painter and glazier, 15, drowned in the Thames when bathing (under water about 20 minutes).		Son of a labourer, 1, accidentally scalded by the upsetting of a saucepan of boiling water in a room .....	2 months
		Cooper, 23, accidentally drowned, while bathing in the river Lea.		Improper Food:—	
		Sealing-wax-maker, 31, accidentally drowned while bathing in the river Lea.		M. 76 (no inquest), colic from a meal of cold beans .....	28 days
		Chairmaker, 17, found dead—apparently drowned whilst bathing in the Regent's canal.			
		M. (age and condition unknown) found dead in the waters of the London Docks without marks.			

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

<p><b>St. George's H.:</b>—  M. mendicant, about 36, (inquest—p.m.) { apoplexy—blood on the surface and in the substance of the brain ..... 2 days  fracture of the skull, supposed from a fall on the foot-pavement after seizure ..... 2 days  M. 63, { scalp wound ..... 5 weeks  sloughing phagedæna ..... 4 weeks  (post mort.) { suppurative between bone and dura mater, and in arachnoid. DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension strong at every examination.		The sky was generally cloudless throughout the day.
MON.	Positive and tension strong throughout the day, except at 1h. 30m., and 3h. 30m. a.m., and at midnight, when nothing was shewn.		The sky was mostly cloudless till 6h. p.m., and overcast afterwards till midnight. At 5h. a.m. a lunar halo was visible of 23° radius.
TUES.	Nothing was shewn till 7h. a.m.; during the remainder of the day it was positive, with variable tension.		Overcast till 3h. a.m.; cloudless till 7h. a.m.; from this time till 6h. p.m. the amount of cloud was variable; cloudless afterwards till midnight.
WED.	Positive and tension generally weak throughout the day.		Cloudless till 7h. a.m.; from this time till 6h. p.m. about three-fourths of the sky were covered. Overcast afterwards till midnight.
THURS.	Positive and weak till 5h. p.m. From 3h. 45m. till 5h. 30m. p.m. strong negative electricity was shewn, with frequent sparks, and a galvanic current; the latter, however, of small amount, and of short duration.		Overcast throughout the day; a slight shower of rain fell at 6h. 30m. a.m. From 3h. 45m. p.m. till 5h. 30m. p.m. rain was falling heavily. The amount collected was six-tenths of an inch.
FRI.	Positive and tension very uniform throughout the day.		Generally overcast till 6h. p.m. From 6h. p.m. till 10h. p.m. the amount of cloud was small; cloudless afterwards till midnight.
SAT.	Positive and tension variable till 6h. p.m. Nothing was shewn afterwards till mid- night.		The amount of clouds was variable till 5h. a.m.; from this time till 6h. p.m. the sky was generally overcast; and about one-half of it was covered between 6h. p.m. and midnight. A shower of rain fell at 8h. 30m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 56'6; and the mean reading at 7h. 20m. P.M., was 63'6; the mean readings at the Royal Observatory for the same times were 56'3 and 63'4 respectively.

† The direction of the wind for the week was variable.

# Births and Deaths registered in London,

During the Week ending Saturday, August 14th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn during the morning. Slightly negative at 1h. 30m. p.m. Positive and tension moderate in the evening.	Heavy clouds about.	Detached cumuli, cirrostratus, and scud generally covered about one-half of the sky till about noon. Between 1h. 50m. and 2h. 40m. p.m. there was a thunder storm. Rain was falling very heavily, and several peals of thunder were heard, mostly in the N.W. At 2h. 35m. a very vivid flash of lightning was seen, followed by thunder, after an interval of 3 sec. During the remainder of the day about one-half of the sky was covered.
MON.	Slightly positive at 9h. a.m., and from 6h. p.m. till midnight. Nothing was shewn at any other times.		Fleecy clouds and cirrostratus covered about one-third of the sky till 4h. a.m. Mostly overcast from this time till 10h. p.m., and partially clear during the remainder of the day.
TUES.	Positive but weak at 1h. a.m., at about noon, and from 7h. till 10h. p.m. Nothing was shewn at any other times.		The sky was nearly cloudless till 2h. a.m., and generally overcast during the rest of the day. A thin rain was falling at intervals from 7h. a.m. till 10h. p.m.
WED.	Positive and tension moderate from 9h. a.m. till 6h. p.m. At other times nothing was shewn.		Cloudless till 2h. a.m.; from this time till noon about three-fourths of the sky were covered; during the remainder of the day the amount of cloud was very variable; at midnight the sky was overcast.
THURS.	Nothing was shewn throughout the day.		Overcast till 7h. 30m. a.m.; from this time till 10h. a.m. one-half of the sky was covered; nearly overcast till 5h. p.m., and generally clear from 6h. p.m. till midnight. The prevailing clouds were cirrostratus and scud.
FRID.	Positive and tension generally strong from 9h. a.m. till 10h. p.m. Nothing was shewn at any other times.		The sky was overcast till 9h. a.m., and was about one-half covered till 6h. p.m.; overcast at 6h. p.m., and cloudless afterwards till midnight. Cirrostratus, light portions of cumuli, and scud, were the prevailing clouds.
SAT.	Nothing was shewn during the day, except at 4h. and 6h. p.m., when it was positive and weak.		The sky was mostly cloudless till 6h. a.m., and nearly overcast till noon; from noon till 10h. p.m. the amount of cloud was small, and it was overcast afterwards till midnight. Cumuli, cirrostratus, fleecy clouds and scud were the kinds of cloud prevalent.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 58.9; and the mean reading at 7h. 30m. P.M., was 64.3; the mean readings at the Royal Observatory for the same times were 58.6 and 64.0 respectively.

† The direction of the wind for the week is S.W

Births and Deaths registered in London,

During the Week ending Saturday, August 21st, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 33.

(The tabular abstract on the first page is for the week ending Saturday, Aug. 21st. The following selection of cases is made from the returns for the week ending Aug. 14th.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Drowning (continued):—	duration
In St. Bartholomew's Hospital, carpenter, 25, (post mort.)—fracture of his skull by falling down a staircase (at Canoubury) .....	2 hours	M. 10, drowned (could not swim).		Wife of a carman, 47, found dead in the Surrey Canal—suicide by drowning, being in a state of mental aberration .....	7 hours
Carman, 39, whether from a natural cause, or from the effects of an accidental fall, no sufficient evidence to prove.		Apprentice to a printer, 17, drowned while bathing, from being struck by a stone flung at him by a person unknown—manslaughter.		Hanging and Suffocation:—	
M. 76, { chronic bronchitis .....	12 years	Assistant cook on board a steamboat, 27, accidentally drowned from a skiff, in which he was alone at the time (in the River Thames, at Battle Bridge stairs).		Waiter out of place, 38, hanged himself—insane.	
(no inquest) { concussion of the spinal cord from a fall .....	9 days	Clerk in a flannel factory, 15, accidentally drowned while bathing in the River Thames (brought ashore at Battle-bridge Stairs).		Son of an engineer, 2 mon., accidental asphyxia—choked by an oyster.	
In St. Thomas' Hospital, M. 68 (no inquest), fracture of thigh .....	6 weeks	M. 6, found dead in Regent's Canal basin, apparently drowned.		In St. Thomas' Hospital, daughter of a news-vender, 6, suffocation caused by her accidentally having swallowed a cherry stone .....	7 days
(during which hemiplegia supervened, of which he died.)		Labourer, 34, accidental death from a fall into the waters of the West India Dock.		In Guy's Hospital, daughter of a wine-spinner, 1, suffocation brought on by drinking out of a teapot of boiling water .....	4 hours
NOTE.—It should be stated in all cases how injury was caused.		F. 68, asphyxia—found with head and arms in a tub of water—no sufficient proof how she came there (in water some hours).		Burns and Scalds:—No deaths registered from either of these causes.	
In Guy's Hospital, M. 47 (no inquest), phlebitis after slight injury to the hand .....	*	M. about 20 (name and profession unknown), found dead in the River Thames—drowned—no marks of violence—no proof by what means he came into the River (in water about 4 or 5 hours).		Poison:—	
Wounds:—		Single woman, 23, found dead in the River Thames—suicide by drowning, being of unsound mind from excessive drinking.		Wife of an engineer, 18, prussic acid, swallowed in the presence of her husband, at a moment of separation on ill terms .....	*
In St. Bartholomew's Hospital, wife of a wood-stainer (supposed to be 55), post mort., erysipelas brought on by an accidental wound of her right leg .....	about 10 days	Son of a labourer, 15, accidentally drowned in the Surrey Canal, when bathing .....	2 hours	Brass finisher, 19, poisoned by corrosive sublimate—suicide .....	*
Labourer, 26, suicide by cutting his throat with a razor .....	*			F. cook, 22, suicide with arsenic, in the eighth month of pregnancy (state of her mind unknown) .....	*
M. 47, cut his throat in a temporary state of insanity .....	*			Brass finisher, 48, poisoned himself by prussic acid, in a temporary state of insanity .....	*

### FOURTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's II.:—	duration	Charing Cross II.:—No deaths registered.	duration	Fever II. (continued):—	duration
M. 40, { chronic inflammation, and thickening of the peritoneum .....	*	Middlesex II.:—		M. 10, { fever .....	26 days
(post mort.) { diseased heart, ascites, and anasarca .....	about 6 months	F. 26, peritonitis .....	4 days	(post mort.) { general emphysema .....	3 days
M. 42, { hæmoptysis .....	1 month	F. 42, cancer uteri .....	1 year	M. 22 (post mort.), chronic peritonitis .....	*
(post mort.) { phthisis pulmonalis .....	*	University College II.:—No deaths registered.		M. 26, { fever and delirium tremens .....	*
{ pneumonia .....	1 week	Fever II.:—		M. 18, { fever .....	21 days
Westminster II.:—		M. 11, { fever .....	*	(post mort.) { typhoid pneumonia—fatty liver .....	*
M. 45, typhoid facial erysipelas .....	7 days	(post mort.) { pus in pleura—gangrene of lungs .....	about 3 days	F. 29, { fever .....	12 days
M. 41 (post mort.), cerebral hæmorrhage .....	3 days	M. 32, { cirrhosis of liver .....	long	(post mort.) { pneumonia .....	4 days
F. 18, febris continua—gangrene of lung .....	21 days	(post mort.) { diseased pancreas .....	*	F. 7, fever .....	*
M. 27, fever—marasmus consequent thereon .....	*	{ diseased spleen .....	long	F. 40, fever .....	*
				Small Poz II.:—No deaths registered.	

FOURTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued):—

King's College H.:—	duration
M. 59, gangrenæ senilis	3 days
St. Bartholomew's H.:—	
M. 19 (post mort.), peritonitis	10 days
M. 26, disease of the heart	
M. 11, { locked jaw	2 days
{ not sufficient evidence of the cause.	
See Violent Deaths.	
London H.:—	
M. 58, paralysis	*
St. Thomas' H.:—	
F. 48, febris	16 days
M. 25, phthisis and diarrhoea	long standing

St. Thomas' H. (continued):—	
M. 57, { morbus cordis.	*
{ anasarca	8 weeks
{ sloughing of the feet.	4 weeks
M. 50, cancer of the mouth and face	*
See Violent Deaths.	
Guy's H.:—	
M. 47, diseased heart—dropsy	*
F. 40, { lateral curvature of the spine	*
(post mort.) { bronchitis—anasarca	*
F. 46 (post mort.), capillary apoplexy	14 days
F. 19, { typhus	17 days
{ rupture of intestines	2 days
See Violent Deaths.	

Dreadnought H.:—	duration
M. 65, { acute dysentery	18 days
(post mort.) { ulcers through the entire length of the large bowel.	*
M. 17, { phlegmonous inflammation of the integuments of the left chest	16 days
(post mort.) { consecutive pleurisy and pericarditis	*
Royal Ordnance Hospital:—	
Gunner in the Royal Artillery, 20, chronic catarrh—consumption	*
(in hospital from 12th June.)	

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, WANT OF BREASTMILK, PURPURA, HÆMORRHAGE, HEMATEMESIS, ETC.

Small Pox:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.	
M. 3, variola, confluent, natural (not vaccin.)	8 days
{ small pox	8 days
M. 1, { first attack—vaccinated 5 days before eruption.	
F. 4, small pox (vaccinated without effect)	*
M. 2, variola	14 days
M. 25, { variola	8 days
{ first attack—vaccinated when a child.	
F. 2, variola—convulsions	14 days
M. 2, small pox (not vaccinated)	*
F. 3 mon., small pox (not vaccinated)	*
F. 1, variola, confluent, maligna (not vaccin.)	13 days
F. 10 mon., small pox (not vaccinated)	*
M. 22, small pox (not vaccinated)	*
M. 4 wks., variola	1 week
M. 3, small pox (after vaccination)	10 days
F. 3, { small pox	14 days
{ vaccinated with effect 16 months ago.	
M. 2, small pox (not vaccinated)	*
{ small pox	6 days
F. 7, { not vaccinated, having been ill from birth.

{ without vaccination.	
Typhus, &c.:—	
PADDINGTON; St. John.	
F. 79, { low continued fever	4 days
{ congestion of the brain and lungs.	
KENSINGTON; Brompton.	
F. 73, { fever	9 days
{ gangrene of the leg	2 days
St. GEORGE, Hanover-square.	
F. 29, bilious fever—typhus	10 days
WESTMINSTER; St. John the Evangelist.	
M. 7, typhus—meningitis	4 days
M. 1, typhus	2 weeks
M. 28 (post mort.), fever and typhoid pneumonia, 7 days	
— St. Margaret.	
M. 62, diarrhoea—fever	*
St. JAMES, WESTMINSTER; Berwick-street.	
F. 47, low fever	*
St. PANCRAS; Gray's Inn-lane.	
F. 19 (p.m.), typhoid fever	7 weeks
— Regent's Park.	
M. 15, typhus	7 days
— Kentish Town.	
F. 75, fever	9 days
HOLBORN; St. Andrew East.	
M. 1, { bilious fever	14 days
{ ulceration of bowels	8 days
F. 5, typhus	21 days
F. 2, fever	8 days
St. LUKE; Old-street.	
F. 55, typhus	10 days
EAST LONDON; Cripplegate.	
F. 6, typhus	3 weeks
WEST LONDON; North.	
M. 21, { fever	14 days
{ bronchitis	10 days
SHOREDITCH; Hoxton Old Town.	
M. 60, typhoid fever	*
M. 27, malignant typhus	9 days
— St. Leonard.	
F. 18, typhus	14 days
— Haggerstone, West.	
F. 62, typhus	4 days
BETHNAL GREEN; The Green.	
M. 6, fever	26 hours
F. 21, low typhus	*
WHITECHAPEL; Spitalfields.	
M. 2, fever	2 weeks

Typhus, &c. (continued):—	duration
WHITECHAPEL; Artillery.	
F. 3, fever	4 weeks
F. 6, typhus	3 weeks
— Mile End, New Town.	
F. 73, { erysipelas	*
{ typhus	14 days
F. 70, typhus	9 days
— North	
M. 36, typhus	12 days
M. 45, typhus	*
M. 28, typhus	*
M. 67, typhus	*
F. 67, synochus and infirmities of age	*
F. 40, fever	*
F. 11 mon., synochus	*
M. 41, synochus	6 days
F. 43, typhus	*
F. 47, synochus	*
F. 28, typhus	*
— The Church.	
F. 1, synochus	*
St. GEORGE IN THE EAST; St. Paul.	
M. 28, typhus	14 days
F. 45, typhus	10 days
— St. Mary.	
F. 55, { fever	8 days
{ pleuritis	16 hours
— St. John.	
F. 46, diarrhoea, consequent on fever	*
STEPNEY; Mile End, Old Town (Upper).	
F. 16, { fever and diarrhoea	14 days
{ effusion of serum into the brain	3 days
— Mile End, Old Town (Lower).	
F. 48, { synochus	8 days
{ erysipelas of the head	2 days
F. 40, fever—tympantitis	5 days
POPLAR; Poplar.	
M. 26, { continued fever	30 days
{ mortification of the bowels	9 days
M. 62, typhus	7 days
St. OLAVE; St. Olave and St. Thomas.	
F. 4, { fever	4 days
{ typhus	1 day
BERMONDSEY; St. Mary Magdalen.	
F. 62, fever	*
LAMBETH; Waterloo (1st part).	
M. 7, low fever	3 weeks
— Lambeth Church (2nd part).	
M. 4, typhus	2 weeks
— Kennington (first part).	
M. 78, { low fever	7 days
{ erysipelas	5 days
— Brixton.	
M. 60, continued fever	23 days
CAMBERWELL; Peckham.	
M. 68, fever	16 days
GREENWICH; St. Paul's, Deptford.	
M. 24, fever	14 days
— Woolwich Arsenal.	
F. 22, fever	1 week
— East.	
M. 56, fever—inflammation of the lungs	*
See Hospital Returns.	
Ague:—	
F. 40, { intermittent fever	6 days
{ abortion	4 days
{ rheumatism.	
Remittent Fever:—	
F. 68, remittent fever	14 days
M. 5, remittent fever	6 months
F. 11, remittent fever and atrophy	2 months
F. 1, remittent fever—convulsions	*
Infantile Fever:—	
F. 1, infantile remittent fever	15 days
F. 1, infantile fever	*
M. 1, { infantile fever	some weeks
{ diarrhoea	7 days
Syphilis:—	
F. 6 mon., secondary syphilis	from birth
Malformation.—	
F. 2 days and 18 hrs. (post mort.), malformation of the great vessels arising from the heart—convulsions before death. The case is peculiar. There was but one main trunk (in the usual situation of the pulmonary artery, but looking more like the aorta) arising from the heart, and from this all the other branches were given off. The ductus arteriosus immediately penetrated the upper lobe of the left lung.	

Malformation (continued):—	duration
F. 6 weeks, deficiency of the soft palate—atony.	
M. nuder 1, imperforate rectum.	
F. 10 days, cyanosis.	
M. 10 days, imperforate anus.	
F. 8 days, imperforate anus.	
Hernia:—	
F. 83, exhaustion from bilious vomiting, influenced by the presence of an old umbilical hernia	*
M. 20 (p.m.) strangulated inguinal hernia	*
Diabetes.—No deaths registered from this cause.	
Stone.—No deaths registered from this cause.	
Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
F. 37, { childbirth	3 days
{ puerperal peritonitis	2 days
F. 29, { fever after childbirth	5 days
{ paralysis of the right side of the body, 7 months	
F. 29, { flooding after delivery (at 7 months).	
{ delivery	12 hours
F. 28, hæmorrhage after labour	1 hour
F. 25, { childbirth	14 days
{ enteritis	4 days
{ typhus gravior	3 days
{ pneumonitis	14 days
F. 28, { gangrene of right lung	6 days
{ commencing 6 days after premature labour.	
Consumption and Childbirth:—	
F. 21, consumption (4 months after childbirth)	*
Inflammation of Womb:—	
F. 38, metritis	4 days
Delirium Tremens:—	
No deaths registered from this cause.	
Hepatitis and Delirium Trem.:—	
M. 49, { hepatitis	1 year
{ delirium tremens	5 weeks
Intemperance:—	
F. about 35 (inquest), natural death by the visitation of God—accelerated by drink	*
M. 62, excessive drinking of spirituous liquors for 10 days	sudden
F. 42 (ing.), natural death—apoplexy, resulting from habits of intemperance	2 days
Privation:—	
M. 55, general decay of nature, accelerated by want.	
Want of Breast-milk:—	
M. 3 wks., atrophy from want of breastmilk	*
F. 6 wks., convulsions—no breastmilk—no medical attendance	*
F. 5 wks., atrophy from want of breastmilk	*
M. 4 mon., debility—want of breastmilk—aphtha	*
F. 6 wks. (inquest), natural death—pined for want of breastmilk, having been brought up by hand	*
F. 1 mon., atrophy from want of breastmilk	3 weeks
F. 19 days, convulsions from inanition	2 weeks
M. 2 mon., atrophy from want of breastmilk	*
M. 4 mon., { atrophy from want of the breast	
{ diarrhoea	14 days
F. 3 wks., inanition	7 days
M. 2 mon., inanition	14 days
F. 5 wks., inanition	3 weeks
Purpura:—No deaths registered from this cause.	
Hæmorrhage:—	
M. 47, { dyspepsia	6 years
{ rupture of blood vessel in the chest a few hours	
M. 19, epistaxis—jaundice	7 days
Hæmatemesis:—No deaths registered from this cause	
Miscellaneous Causes:—	
M. 57, { operation for hypertrophied nose	9 days
{ erysipelas	4 days
M. 65, carbuncle—phthisis	12 hours
F. 5, { suppurative of the ankle joint (from fright)?	4 weeks
F. 48, { flooding from change of life	4 months
{ convulsions	6 hours
{ invagination of caput coli, and 9 inches of colon in the rectum	*
{ incipient mortification of caput coli	*
M. 5 mon., { inflammation of intestines—effusion	6½ days
(post mort.) { obstructed bowels—stercoraceous vomiting, and continued discharge of blood from the bowels	*

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 25; apoplexy, 6; neglect, 1; intemperance, 2; want of breast-milk, 1; other specified causes, 4; "natural death," "visitation of God," "found dead," &c., 9.—TOTAL, 48 cases.

THE NUMBER OF CASES IN WHICH IT IS RECORDED THAT A POST MORTEM EXAMINATION WAS MADE, IS 30.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at any examination during the day.		The sky was overcast with cirrostratus and scud till 3h. p.m., after which time the clouds became broken, and by 5h. p.m. they had entirely disappeared; the sky remained clear till near midnight, when it became suddenly overcast. Frequent flashes of lightning were seen during the evening in the S. and S.E.
MON.	Negative and very active till 7h. a.m. At 9h. a.m. nothing was shewn. From noon till 10h. p.m. positive with weak tension. At midnight strong negative electricity was shewn with frequent sparks.	Rain falling. } Rain falling heavily.	The sky was overcast with cirrostratus and scud throughout the day. Rain was falling heavily from 6h. a.m. till 5h. a.m., and again at midnight. Frequent flashes of lightning were visible from 10h. p.m. till midnight in the E. and S.S.E.
TUES.	Positive and tension variable throughout the day.		The sky was overcast throughout the day with cirrostratus and scud. A clap of thunder was heard in the W. at 6h. 35m. a.m. Drizzling rain was falling from 7h. to 9h. a.m., and occasionally during the evening.
WED.	Nothing was shewn till 4h. p.m. From 4h. p.m. till 5h. p.m. positive and tension variable. Nothing was shewn afterwards.		The sky was overcast throughout the day with cirrostratus and scud.
THURS.	At 9h. a.m., 4h., 8h., and 10h. p.m. positive with moderate tension. At other examinations nothing was shewn.		The sky was generally overcast throughout the day; cirrostratus and scud were the clouds prevalent. Thin rain was falling during the afternoon.
FRI.	Nothing was shewn till 6h. p.m., except at 6h. a.m., and at noon, when it was positive with weak tension. From 6h. p.m. till midnight strong positive electricity was shewn.		Overcast with cirrostratus and scud till 4h. p.m., and cloudless afterwards till midnight.
SAT.	Nothing was shewn throughout the day, except at 6h. p.m., when it was positive and weak.		Cloudless till 2h. p.m.; from this time till 5h. p.m. small portions of cumuli and cirri were prevalent, with slight haze; cloudless afterwards till midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The reading of the thermometer on grass for Aug. 19 was inadvertently omitted.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 60.4; and the mean reading at 7h. 30m. P.M., was 65.2; the mean readings at the Royal Observatory for the same times were 60.0 and 64.7 respectively.

† The mean directions of the wind for the week are N. by E. and N. by W., but the air was generally calm.

# Births and Deaths registered in London,

During the Week ending Saturday, August 28th, 1847.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn during the morning. Positive and tension very strong during the afternoon and evening.		The sky was overcast, with rain falling at intervals till about 9h. p.m. There were a few breaks in the clouds between this time and midnight.
MON.	Positive and tension moderate till 5h. a.m. Nothing was shewn from this time till 4h. p.m. Positive and tension generally strong during the remainder of the day.		The greater part of the sky was covered with cirrostratus and scud throughout the day.
TUES.	Very variable in quantity till 2h. p.m. Positive and tension generally strong after this time		The sky was mostly covered with cirrostratus and scud throughout the day.
WED.	Positive but very weak till 6h. a.m. Positive and tension strong during the rest of the day.		Overcast till 5h. a.m. Cumuli then covered about one-half of the sky till 6h. p.m., and it was overcast during the remainder of the day.
THURS.	Positive and tension moderate till 2h. a.m. Nothing was shewn from this time till 10h. a.m. Positive and tension moderate during the remainder of the day.		Overcast till 10h. a.m. Cumuli, thin cirrostratus, and light clouds then generally covered one-third of the sky till midnight. At 11h. 20m. p.m. a lunar halo was seen, whose radius was 22½°.
FRID.	Slightly positive till 4h. a.m., and at 1h. 20m. p.m. Nothing was shewn at any other times.		Thin cirrostratus, fleecy clouds, and haze, covered about two thirds of the sky throughout the day.
SAT.	Nothing was shewn till about noon. Positive and tension moderate during the remainder of the day.		The greater part of the sky was free from cloud till 2h. p.m. Generally overcast during the remainder of the day. At 9h. 15m. a.m. a solar halo was seen, whose radius measured 10°.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 53.6; and the mean reading at 7h. 30m. P.M., was 63.0; the mean readings at the Royal Observatory for the same times were 52.2 and 61.8 respectively.

† The directions of the wind for the week has been variable.

# Births and Deaths registered in London,

During the Week ending Saturday, September 4th, 1847.

**EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 35.**

*(The tabular abstract on the first page is for the week ending Saturday, Sept. 4th. The following selection of cases is made from the returns for the week ending Aug. 28th.)*

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

**RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.**

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Poison:—	duration
M. 87, general decay of nature, accelerated by a fall through weakness .....	*	M. 38, boot and shoe maker, found in the mud on the bed of the River Thames, off Western Wharf, Adelphi—no marks of violence—no evidence how and when he became drowned .....	*	M. 9, arsenic eaten in rhubarb pudding, mixed in the flour by his mother, in ignorance of its nature; it having been left carelessly within her reach on a shelf by her husband, but not with evil intent .....	4 hours
M. 6, { an injury of the head from a brick being let fall upon him. { locked jaw on the .....	6th day	M. 26, mate of a steam vessel, accidentally drowned by a fall into the River Thames, from a pier gangway .....	*	M. 3, arsenic eaten in rhubarb pudding, mixed with the flour by his mother, in ignorance of its nature; it having been left carelessly within her reach on a shelf by her husband, but not with evil intent .....	5½ hours
F. 3 mon., { fracture of the humerus .....	*	M. 43, Chelsea pensioner, drowned—no proof by what means he came into the water of the River Thames .....	6 days	M. 17 mon., arsenic eaten in rhubarb pudding, mixed with the flour by his mother, in ignorance of its nature; it having been left carelessly within her reach on a shelf by her husband, but not with evil intent .....	7 hours
F. 5, daughter of a merchant's clerk, accidentally run over by a carriage in the Hackney Road .....	*	<b>Hanging and Suffocation:—</b>		M. 34, arsenic eaten in rhubarb pudding, mixed in the flour by his wife, in ignorance of its nature; it having been left carelessly within her reach by her husband, but not with evil intent .....	23 hours
M. 66, rupture of an artery, resulting from violence, but how received no actual proof—supposed contact with a cart .....	5 months	M. 27 (post mort.), inhaling sulphuretted hydrogen gas when in a privy, vitriol having been poured into a defective and foul drain communicating with the privy .....	died instantly	F. 4, arsenic eaten in rhubarb pudding, mixed in the flour by her mother, in ignorance of its nature; it having been left carelessly left within her reach on a shelf by her husband, but not with evil intent .....	8 hours
F. 3 (post mort.), congestion of the membranes of the brain, resulting from a fall accidentally received .....	*	M. 60, suffocated by falling into a ditch accidentally .....	5 mins.	F. 6, arsenic eaten in rhubarb pudding, mixed with the flour by her mother, in ignorance of its nature; it having been left carelessly within her reach on a shelf by her husband, but not with evil intent .....	10 hours
M. 8 (post mort.), rupture of a blood vessel of the brain, resulting from blows or falls, how received unknown .....	15 hours	M. 2, { cynanche tonsillaris .....	3 days	M. 8, manslaughter—the cause not stated in the return.	
M. 1, son of a grocer, killed by the off wheel of a certain cart passing on and over his head accidentally .....	10 mins.	{ constitution enfeebled by the continued pressure of a farthing in the cardiacorifice of the stomach 2 months			
<b>Wounds:—</b>		<b>Burns and Scalds:—</b>			
F. 35, wife of a smith, suicide—cut her throat, being of unsound mind .....	5 mins.	M. 19 mon., son of a tailor, scald of the chest, producing inflammation of the bowels, supposed when about to drink from a mug of hot water .....	9 days		
		F. 8 mon., daughter of a labourer, scalds by upsetting a coffee pot, which had been placed on the floor .....	8 days		

**FIFTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.**

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's H.:—	duration	Charing Cross H.:—No deaths registered.	duration	Fever H.:—	duration
M. 23, stricture and disease of the bladder and kidneys .....	*	Middlesex H.:—		M. 15, { scarlatina maligna .....	*
M. 31 (post mort.), ulcer on leg, fatty kidney, liver, &c. ....	*	F. 39, diseased spine .....	10 months	{ in hospital 3 days.	
<b>Westminster H.:—</b>		F. 30, scarlatina .....	*	<b>Small Pox H.:—</b>	
M. 12, typhus .....	*	F. 22, ascites—anasarca .....	*	F. 23, { small pox, confluent .....	19 days
		<b>University College H.:—No deaths registered.</b>		{ fever .....	8 days

**FIFTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued):—**

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at 4h. p.m. At other examinations nothing was shewn.		Three-fourths of the sky were covered with cumuli, cirrostratus, and scud throughout the day. At 5h. a.m. a shower of rain fell.
MON.	Nothing was shewn till 9h. a.m. Positive and tension very variable during the remainder of the day.		The sky was cloudless at 6h. (stat.) and the greater part was covered during the remainder of the day. The prevailing clouds were cirrostratus, cumulostratus, and scud.
TUES.	Positive and tension moderate throughout the day, except at 9h. a.m., when nothing was shewn.		The sky was overcast till 2h. p.m.; from this time till 6h. p.m. the amount of cloud was variable; cloudless afterwards till midnight. The prevailing clouds were cirrostratus and scud.
WED.	Positive and tension weak till 7h. a.m. Nothing was shewn from this time till 4h. p.m. Positive and tension weak during the remainder of the day.		The amount of cloud was small till noon; overcast till 4h. p.m., and about one-half covered till midnight. Cirrostratus and scud were the prevailing clouds.
THURS.	Nothing was shewn during the morning. Negative and very active at 1h. 30m. p.m. Positive and very weak during the remainder of the day.	Rain falling.	Cloudless till 4h. a.m., and nearly overcast till 2h. p.m. The amount of cloud was variable till 6h. p.m., and cloudless afterwards till midnight. Cumulostratus, cirrostratus, and scud, were the prevailing class of clouds. A shower of rain fell at 1h. 30m. p.m.
FRID.	Nothing was shewn till 9h. a.m. From 9h. a.m. till 1h. p.m. positive and weak. Nothing was shewn afterwards.		Cirrostratus, scud, and haze, variable in amount, prevailed till 7h. a.m.; the sky was overcast till 6h. p.m., and about one-half covered till midnight. Rain was falling occasionally in the morning, and again in the afternoon.
SAT.	Nothing was shewn throughout the day.		The sky was overcast with cirrostratus till 2h. a.m.; nearly cloudless from this time till 6h. a.m.; about three-fourths covered till 6h. p.m.; and generally clear till midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 50.3; and the mean reading at 7h. 30m. P.M., was 58.8; the mean readings at the Royal Observatory for the same times were 49.2 and 56.0 respectively.

† The mean direction of the wind for the week is nearly W.

# Births and Deaths registered in London,

During the Week ending Saturday, September 11th, 1847.

ANNUAL SERIES VIII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn at any examination during the day.		The sky was one-half covered during the day with cumuli, cumulo-trati, and cirrostratus. A fog prevailed during the evening.
MON.	Nothing was shewn till 9h. a.m. Positive with moderate tension from 9h. a.m. till 4h. p.m. Negative and very active at 6h. p.m., with frequent sparks, and galvanic currents. Positive with tension strong during the remainder of the day.	A squall of rain.	Three-fourths of the sky were covered throughout the day with cumulostrati, cirrostratus, and scud. At 6h. p.m. a squall of rain occurred.
TUES.	Positive with moderate tension till 3h. a.m. Nothing was shewn afterwards.		The sky was generally clear till 9h. a.m., about one-half covered till 2h. p.m., and overcast afterwards till midnight. Cirrostratus and scud were the prevailing clouds. Rain was falling at intervals during the evening.
WED.	Nothing was shewn till 10h. 40m., when it was negative and active. Positive with weak tension during the remainder of the day.	Lightning with distant thunder.	Generally overcast till 9h. p.m.; the amount of cloud was variable afterwards till midnight. Cumuli, cumulostrati, and scud were the prevailing clouds. At 9h. a.m. a great gloom prevailed. Lightning, with distant thunder, were heard between 10h. 40m. and 11h. a.m.
THURS.	Positive and tension strong from 4h. to 6h. p.m. Nothing was shewn at any other time.		The greater part of the sky was free from cloud till 6h. a.m., generally covered till 6h. p.m., about one-half covered at 6h. p.m., and nearly cloudless afterwards till midnight. Cirrostratus and scud were the prevailing clouds.
FRI.	Nothing was shewn till 2h. p.m. Positive with moderate tension during the remainder of the day, except at midnight, when nothing was shewn.		The amount of cloud was variable till 6h. a.m., and nearly overcast afterwards till noon. During the remainder of the day the sky was generally clear. Cumuli, cirri, and light fleecy clouds were the class prevalent.
SAT.	Nothing was shewn till 9h. a.m. Positive with variable tension during the remainder of the day.		Overcast till 7h. a.m., and clear till 4h. p.m. The amount of cloud during the remainder of the day was variable in amount. Cirrostratus and scud were the prevailing clouds.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed opposite to the civil day which precedes that on which the thermometers are read. On Saturday the thermometer on grass was not exposed to the sky through inadvertence.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 49.0; and the mean reading at 7h. 30m. P.M., was 57.3; the mean readings at the Royal Observatory for the same times were 49.8 and 58.4 respectively.

† The mean direction of the wind for the week is W.S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, September 18th, 1847.

ANNUAL SERIES VIII.]

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 37.

(The tabular abstract on the first page is for the week ending Saturday, Sept. 18th. The following selection of cases is made from the returns for the week ending Sept. 11th.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words “no inquest.”

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning:—	duration
Labourer, age not known, fracture of the skull—fell from a scaffold in Drury Lane when at work .....	instant	Son of a brass-finisher, 2, injuries to his belly by being run over by a cart, as he was crossing Southwark Bridge Road .....	$\frac{1}{2}$ an hour	Labourer, 46 (post mort.), found dead in the River Thames, without marks of violence—no evidence how he became drowned .....	*
In Charing Cross Hospital, carpenter, 47, fracture of the base of the skull—fell on the stage from the flies of the scenery at the Italian Opera House, Haymarket, when at work .....	2 hours	Cab-driver, 30, rupture of a bloodvessel of the dura mater, resulting from a fall from a eab accidentally .....	9 hours	F. 29, a servant, found dead without marks of violence, apparently drowned .....	*
M. 36 (post mort.—no inquest), fractured spine .....	*	In St. Bartholomew's Hospital, widow, 76, fracture of the thigh bone, from being accidentally thrown down by a cart when crossing a street .....	*	M. 31, found drowned—how he came into the water unknown.	
M. 7, inflammation of the bowels, brought on by a kick received from a seboolfellow .....	*	Son of a boat-maker, 2, natural death—run over by a truck 10 days previously.		M. 18, drowned by falling out of a steamboat into the River Thames—under water ....	4 days
Son of a shoemaker, 9, contusions on the arm and body, being struck accidentally by a swing .....	7 days	F. 34, injuries to her head, caused by being thrown out of a gig accidentally .....	*	F. 18, found dead in the waters of the Regents Canal, without marks of violence—missing 2 days	
Wife of a bricklayer, 52, hemorrhage—rupture of bloodvessels of the stomach, the effect of blows given by her husband .....	4 days	M. 37, paralysis of the bladder, by a fall from a cart .....	1 week	Son of a printer, 7, accidentally drowned by falling out of a boat into the River Thames, when at play .....	7 days
Daughter of a grocer, 8, compound fracture of the left arm, by falling from a wall accidentally .....	4 days	Wounds:—		Burns and Scalds:—	
F. 35, fracture of the skull and concussion of the brain, by throwing herself from an upper window (temporary insanity).		In Westminster Hospital, gun case maker, 38 (post mort.), suffocation from inflammation of the epiglottis and trachea, after laceration of the tongue and broken jaw, caused by the discharge of a pistol (loaded with powder) into the mouth (no evidence whether with suicidal intent) .....	2 days	M. 2, { burn .....	2 days
Son of a warehouseman, 6, run over accidentally by a cabriolet—death immediate, from a fracture of the skull.		M. 63, { diseased antrum, from injury .....	12 months	{ convulsions .....	9 hours
Son of a greengrocer, 3, accidentally killed by the wheel of a cart passing over his body $\frac{1}{4}$ of an hour		(no inquest) { hemorrhage .....	*	Hanging and Suffocation:—	
		NOTE.—It should be stated in all cases how injury was caused.		Son of a barber, infant, suffocated in night-soil immediately after birth, and so wilfully murdered by his mother (illegitimate) .....	*
				Porter at an hotel, 17, hanged himself by a rope from a beam in a lodging-house, being at the time of unsound mind .....	*
				Poison:—No deaths registered from this cause.	
				Male infant, found dead, floating on the River Thames, off Whitefriars—navel-string not secured—cause of death unknown.	

### FIFTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

St. George's II.:—	duration	Charing Cross II.:—	duration	University College II. (continued):—	duration
F. 26, { cirrhosis .....	*	F. 39, { strangulation of a portion of the small intestines .....	*	{ stricture of urethra .....	*
(post mort.) { ascites .....	*	(post mort.) { (operation on July 15th).	*	M. 35, { fistula in perinaeo .....	*
		{ inanition .....	*	(post mort.) { dysentery .....	14 days
		See Violent Deaths.		{ ulceration and thickening of the colon.	
Westminster II.:—		Middlesex II.:—		Fever II.:—	
M. 25 (inquest—post mort.), rupture of aneurism of the aorta .....	instant	M. 54, cancrum lingue .....	3 months	M. 30, { fever .....	*
{ congestion of the brain .....	*	F. 57, epileptic fits .....	*	{ in hospital 18 days.	
M. 24, { diseased kidneys, and abscess of the prostate gland .....	*	F. 40, diseased heart .....	18 months	Small Pox II.:—	
See Violent Deaths.		University College II.:—		F. 3, { small pox, confluent, with diarrhoea ..	15 days
		M. 37, { large serous cyst of liver .....	*	{ said to have been vaccinated—no cicatrix.	
		(post mort.) { jaundice .....	*	King's College II.:—No deaths registered.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Slightly positive during the morning. Nothing was shown at any other ex- amination.		The sky was generally cloudy throughout the day.
MON.	Positive and tension moderate from 7h. till 10h. a.m. Nothing was shown at any other time.		Overcast throughout the day. Rain was falling from 2h. p.m. till midnight.
TUES.	Positive and tension moderate from 9h. till noon. Nothing was shown at any other time.		Overcast till 4h. a.m., at which time the sky became clear, and continued so till 6h. a.m. Cumuli, cirrostrati, and ad. A heavy shower of rain fell between 3h. and 5h. p.m. during the remainder of the day. Rain was falling occasionally during the afternoon.
WED.	Positive and tension generally strong from 1h. p.m. till 10h. p.m. Nothing was shown at any other time.		The sky was about one-half covered with cloud till 6h. a.m., and generally overcast during the remainder of the day. Rain was falling a little before midnight.
THURS.	Positive and tension variable from 5h. p.m. till 10h. p.m. Nothing was shown at any other time.		The sky was nearly cloudless from 7h. till 8h. a.m., and from 6h. p.m. till midnight. With these exceptions it was mostly overcast throughout the day. Rain was falling occasionally, and before 5h. a.m.
FRID.	Nothing was shown throughout the day.		Nearly cloudless from 3h. to 4h. a.m., and at about midnight. At other times it was overcast. Rain was falling occasionally from 10h. a.m. to 6h. p.m.
SAT.	Positive and tension strong from 11h. a.m. till 2h. p.m. Nothing was shown at any other time.		Cloudless at about 8h. a.m., and from 7h. p.m. till midnight. At other times the greater part of the sky was covered with cumuli, cirrostrati, and ad. A heavy shower of rain fell between 3h. and 5h. p.m., and at 4h. 30m. p.m. a squall of hail and rain occurred, which lasted 7 minutes. The direction of the wind, which had previously been S.S.W., suddenly veered round to the N.N.W. when the squall commenced, and then went round to the W. when the squall had ceased.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. On Monday the thermometer on grass was not exposed through inadvertence.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 51.6; and the mean reading at 7h. 30m. P.M., was 54.2; the mean readings at the Royal Observatory for the same times were 51.5 and 52.6 respectively.

# Births and Deaths registered in London,

During the Week ending Saturday, September 25th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 38.

(The tabular abstract on the first page is for the week ending Saturday, Sept. 25th. The following selection of cases is made from the returns for the week ending Sept. 18th.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning:—	duration
M. 49 (p.m.), injury of spine (no inquest), inflammation of the kidneys. 19 days		In London Hospital, F. 2, accidental, by a fall from a window (fractured skull) same day		M. 70, drowned, whether accidentally or otherwise not known to the jury.	
In Charing Cross Hospital, carpenter, 32 (post mort.), mortification after a lacerated wound of the right thigh—fell from a platform, by the slipping of a ladder, when at work at the Junior United Service Club. 7 days		M. 45, natural death; from inflammation of the lungs, accelerated by a fall, and intemperance		F. 28, found dead, without marks of violence, in the Regent's Canal.	
Widow of a labourer, 68, injuries to the head from an accidental fall down a flight of stone stairs.		M. 54, concussion of the brain—probable dislocation of the vertebrae of the neck a few minutes		M. 1, found dead, apparently drowned, in a pail of water.	
M. 83 (no inquest), fracture of thigh—shock to the nervous system.		M. 11, son of a brickmaker, run over by a cart wheel—the wheel passing over his head		M. 8, accidentally drowned in the River Thames, by falling from a barge	
In St. Bartholomew's Hospital, workman at a silk-dyer's, 51 (post mort.), fractured skull and lacerated brain, by falling from a ladder at Kingsland Road.	27 hours	In St. Bartholomew's Hospital, labourer, 29, delirium tremens, brought on by a fracture of his leg, from being run over by a cabriolet at Hoxton.	3 days	Seaman, 19, found dead, apparently drowned, without marks of violence.	
In St. Bartholomew's Hospital, labourer, 50, inflammation of his chest, caused by a fracture of his ribs—no evidence how occasioned		In St. Bartholomew's Hospital, picture dealer, 69, compound fracture of his left thighbone, from being run over by a cart, as he was crossing Ray Street, Clerkenwell.	3 days	M. 9, accidentally drowned by falling from the pier head	
In St. Bartholomew's Hospital, painter, 41 (post mort.), fracture of his skull by falling from a scaffold, at Wood Street, Cheapside.	9 days	M. 22, accidentally killed by a crush and fracture of the skull, from a railway engine		Sailor, 35, found dead in the River Thames, apparently drowned, without marks of violence.	
In St. Bartholomew's Hospital, son of a slaughterman, 11 wks., probable concussion of the brain, caused by falling on the floor of a room at Cow Cross Street.	a few minutes	In London Hospital, labourer, 20, accidental, by a fall from a ballast waggon train, on the Eastern Counties Railway.	10 days	Ballast heaver, 26, accidental death from drowning, by falling from a jetty	
In St. Bartholomew's Hospital, labourer, 77, fracture of the left thighbone, caused by falling down, in the road, at Hoxton.	15 days	In London Hospital, soldier, 41, accidentally killed by a cart running over him in the Commercial Road.		Son of a lighterman, 5, accidentally drowned by falling into certain water, called the Surrey Iron Railway Basin.	15 mins.
In St. Bartholomew's Hospital, a waiter, 53, inflammation of the pleura and membrane surrounding the heart, probably excited by a fractured rib from an accidental fall.		In London Hospital, daughter of a labourer, 9, accidentally run over by a dray at Ratelif—fractured thigh and leg.	1 day	Carver and gilder, 26, accidentally drowned in the River Thames, by the upsetting of a skiff.	17 hours
M. 38, injuries caused by his body having been crushed by a quantity of gravel having fallen accidentally upon him.		Wounds:—		Burns and Scalds:—	
In St. Bartholomew's Hospital, warehouseman, 55 (post mort.), delirium tremens, caused by a wound in his head, from a cask falling out of a crane at Upper Thames Street.	4 weeks	Footman, 25, suicide with a pistol, fired into his head		In St. Bartholomew's Hospital, son of a labourer, 4, accidentally burnt by his clothes catching fire, when in a room alone	
In London Hospital, seaman, 32, accidental, by falling down a ship's hold at the London Dock.	4 days	In St. Bartholomew's Hospital, a clerk to a solicitor, 52, cutting his throat with a razor (temporary insanity)	10 days	F. 3, accidental death from scalds, from drinking boiling water from a kettle.	
In London Hospital, labourer, 25, accidental by a fall from a mast upon a lighter—a blow on the head thereby.		In London Hospital, farrier, 22, accidentally shot by a gun lying in a boat, and wounded in the arm, thereby causing death.		In London Hospital, M. 1, accidental scalds, from falling into a tub of water.	same day
		Footman, 19, pistol shot wound, by shooting himself—what state of mind he was in no sufficient proof.		In London Hospital, hot-presser's daughter, 4, accidentally burnt by her clothes taking fire.	4 days
		NOTE.—It should be stated in all cases how injury was caused.		F. 74, found dead at the foot of a flight of stairs, apparently burnt to death by her clothes taking fire.	

### SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

Consumption II:—No deaths registered.		Fever II:—		St. Bartholomew's II. (continued):—	
St. George's II:—		duration		duration	
M. 27, { abscess over knee joint	1 year	M. 18, fever (in hospital 7 days)		M. 45, phthisis	
(post mort.) { bilious vomiting and fever	16 days	M. 23, { fever		M. 56, emphysema, followed by delirium tremens	
{ fatty kidneys—pulmonary tubercles.		(post mort.) { ulceration of ileum and colon.		See Violent Deaths.	
M. 31, { granular degeneration of the		M. 46, { dysentery		London H:—	
(post mort.) { kidneys		(post mort.) { ulceration of lower part of ileum		M. 39, { albuminuria	3 months

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn during the morning. Positive and tension moderate during afternoon and evening.		Thin cirrostratus, scud, and haze covered most of the sky during the day. Rain was falling after 9h. p.m.
MON.	Nothing was shewn from 2h. a.m. till 6h. a.m. Strong negative electricity was shewn between 2h. p.m. and 6h. p.m. At other times it was positive, with tension occasionally strong.	} Rain falling.	The sky was partially covered with cirrostratus and scud between 7h. a.m. and 2h. p.m. At other times it was overcast. A nearly perfect, but faint, lunar halo was visible at about 11h. 20m. p.m., whose radius as measured was 23°. Rain was falling occasionally during the day.
TUES.	Positive and tension moderate at 1h. 20m. a.m., and from 9h. a.m. till 2h. p.m. Nothing was shewn at any other times. No electricity was shewn during the remainder of the week.		Thin cirrostratus covered about one-half of the sky till 4h. a.m. At other times it was overcast. A drizzling rain was falling from 2h. p.m. till 10h. 30m. p.m. The arc of a faint solar halo was visible at 8h. 20m. a.m.
WED.			Cirrostratus and scud covered one-half of the sky till 4h. a.m. Nearly overcast from that time till 2h. p.m. The sky was occasionally cloudless between this time and midnight.
THURS.			The greater part of the sky was overcast throughout the day. At 9h. p.m. a faint lunar halo was visible.
FRID.			Generally overcast till 8h. p.m., and occasionally cloudless between that time and midnight. At about 9h. p.m. an aurora borealis was visible, bright streamers crossing the Zenith from the N.N.W. The magnets were violently disturbed during the greater part of the day.
SAT.			The sky was mostly covered with cirrostratus, scud, and fleecy clouds from 7h. a.m. till 4h. p.m., and at about midnight. At other times it was nearly cloudless.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 51.5; and the mean reading at 7h. 30m. P.M., was 57.3; the mean readings at the Royal Observatory for the same times were 52.3 and 57.0 respectively.

# Births and Deaths registered in London,

During the Week ending Saturday, October 2nd, 1847.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 39.  
(The tabular abstract on the first page is for the week ending Saturday, Oct. 2nd. The following selection of cases is made from the returns for the week ending Sept. 25th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.			
NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."			
Fractures and Contusions:—	duration	Wounds:—	duration
Schoolmaster, 62, irritative fever from a fracture of the thigh by a fall on the floor	3 weeks	F. 43, suicide—cut her throat with a razor, being in a state of mental derangement	20 mins.
F. 79 (no inquest), old age and debility—fracture of the neck of the thigh bone	*	A travelling draper, cut throat—felo-de-se.	
F. 47, injuries to the head from a fall down stairs	4 days	Laundress, 20, cut throat—wilfully murdered.	
F. 48, erysipelas from a wound on the head, caused by falling down stairs	1 week	Drowning:—	
In St. Thomas' Hospital, son of a shoemaker, 17, extravasation of blood on the brain, from a blow on his head, by falling into the River Thames	36 hours	Labourer, 19, drowned—boat (a light gig) filled with water, and swamped with deceased and four other persons	under water 58 hours
In Guy's Hospital, painter, 40 (post mort.), fracture of the bones of the pelvis, and other injuries, by being jammed between two steamboats, as he was painting a paddle box	4 days	M. 32, accidentally drowned while bathing in the River Lea	under water 20 minutes
M. 34, crushed to death between the wheels of a bark mill, his hand being caught when in the act of greasing the cogs	instantly	M. 11 noon, accidentally drowned by falling into a pan of water	*
A waterman, 27, compression of the brain, caused by a blow accidentally received from a paddle wheel of the "City of Limerick" steamboat	2 days	M. 16, drowned by falling off a barge	4 days
F. 9, internal injuries—run over by a cart wheel	instantly	Drill sergeant, 31, accidentally drowned in the River Thames, being thrown out of a cutter by coming in collision with a steamboat	6 days
		Shopman, 30, drowned while bathing in the River Thames	2 days
		Burns and Scalds:—	
		Son of a chair maker, 2, clothes took fire when left alone in a room by his mother—fire in the grate without a guard—found dead.	
		Burns and Scalds (continued):—	duration
		M. 1, scald	9 days
		F. 55, burns accidentally received by falling against a fire, when in a fit	11 weeks
		Hanging and Suffocation:—	
		A clerk, 34, hanged and suffocated himself (while of unsound mind)	*
		M. 63, suicide by strangulation with a handkerchief (of unsound mind)	*
		M. 69, suicide by hanging (of unsound mind)	*
		F. 36, hanged herself in a temporary state of insanity	*
		M. 85, choked himself while eating his dinner	5 minutes
		Weaver, 64, hanged himself in a temporary state of derangement	*
		M. 74, suicide by hanging himself, being at the time of unsound mind	*
		Poison:—	
		In Westminster Hospital, F. 27 (post mort.), opium taken in an overdose, accidentally	36 hours
		F. 13, suicide by taking laudanum (of unsound mind)	*

SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.			
NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.			
Consumption II:—	duration	Fever II:—	duration
F. 29, phthisis	8 months	F. 48, { pleuro-pneumonia	*
St. George's II:—		(post mort.) { effusion of pus in pleura	(in hospital 23 days)
M. 69, chronic bronchitis	*	Small Pox II:—	
M. 67, disease of heart and lungs	*	M. 37, small pox, confluent	8 days
Westminster II:—		said to have been vaccinated in infancy—no cicatrix.	
F. 49, { uterine disease	some months	M. 45, small pox, confluent	4 days
{ typhoid marasmus	some weeks	said to have been vaccinated at 5 years old—no cicatrix.	
See Violent Deaths.		King's College II:—	
Charing Cross II:—No deaths registered.		M. 23, bronchitis	3 weeks
Middlesex II:—		M. 35 (post mort.), phthisis	12 months
M. 53, pneumonia	*	M. 49 (post mort.), aneurism of aorta (burst).	
F. 11, febris	*	F. 55, { strangulated hernia (operation)	3 days
University College II:—No deaths registered.		{ low fever	12 days
Royal Free II:—No deaths registered.		M. 20 (post mort.), white softening of brain—meningitis	12 days
		St. Bartholomew's II:—	duration
		disease of the kidneys	*
		M. 20, { peritonitis	*
		(post mort.) { effusion into the chest	*
		{ left ventricle of the heart hypertrophied.	*
		M. 36, convulsions	*
		M. 3, pleurisy, with effusion	1 week
		M. 29, epilepsy	*
		M. 47, phthisis—disease of liver	*
		M. 30, dropsy	*
		F. 50, destitution	*
		F. 63, erysipelas of arm	*
		London II:—	
		M. 15, dropsy	*

SIXTEEN HOSPITALS.—CAUSES OF DEATH (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS (continued).—

St. Thomas' II.:	duration
F. 16, pneumonia	2 months
F. 38, corroding ulcer of uterus	many months
M. 41, cancer of the glands of the neck	*
M. 19, pneumonia	8 months
F. 47, irritative fever, after operation	*
See Violent Deaths.	
Guy's II.:	duration
M. 27 (post mort.), fever—ulceration of intestines	15 days
F. 19, fever	14 days
M. 26, diseased chest and heart	*
See Violent Deaths.	

Royal Ordnance II.:	duration
M. 31, consumption	5 months
Dreadnought II.:	duration
M. 19, { abscess of leg	5 weeks
(post mort.) { erysipelas of the leg and thigh, commencing Sept. 3rd., terminating in gangrene of integuments and collapse.	
M. 45, { phthisis	5 months
(post mort.) { gripping pains and vomiting.	
{ 2 days before death, excessive vomiting and exhaustion.	

Dreadnought II. (continued):	duration
M. 19, { typhoid fever	15 days
(post mort.) { accompanied with diarrhoea	*
{ ulceration of small intestines.	
M. 19, { phthisis	*
(post mort.) { emphysema of cellular tissue of neck	few days
{ general adhesions of both pleura, circumscribed abscesses of both lungs, one of them ulcerating through the costal pleura of the left side.	

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, WANT OF BREASTMILK, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.	
F. 5, { small pox	12 days
{ vaccinated about 4 years ago.	
{ small pox, confluent	36 days
{ variolous pleurisy, with effusion	15 days
{ paracentesis thoracis	5 days
{ vaccinated when 9 years old, two small cicatrices.	
F. 22, small pox, confluent (unprotected)	14 days
{ small pox, followed by measles, 5 weeks	
M. 11 mon., { inflammation of the lungs	*
{ small pox (1st attack)	9 days
{ not vaccinated.	
M. 6 mon., { small pox (1st attack)	*
{ not vaccinated.	
M. 1, { small pox	6 days
{ convulsions	2 hours
{ (not vaccinated)	
F. 2 mon., { small pox	8 days
{ not vaccinated.	
F. 3, { variola confluent	*
{ not previously vaccinated.	
M. 4, { variola, confluent	8 days
{ after vaccination.	
M. 10, { small pox	*
{ after vaccination.	
F. 4, { small pox	*
{ vaccinated without effect.	
M. 2, { small pox	*
{ not vaccinated.	
F. under { small pox	7 days
1 year, { not vaccinated.	
M. 4, { small pox	*
{ not vaccinated.	
M. 4 mon., { small pox	10 days
{ not vaccinated.	
M. 5, variola (natural)	*
F. 15, variola (natural)	*
M. 1, { variola	*
{ not vaccinated.	
M. 5 mon., { small pox	4 days
{ not vaccinated.	
M. 6, { small pox	1 week
{ not vaccinated.	
M. 21, confluent small pox	14 days
M. 7, { small pox	1 week
{ not vaccinated.	
F. 30, { confluent small pox	13 days
{ 1st attack, not vaccinated.	
F. 2, { small pox	9 days
{ not vaccinated.	
See Return of Small Pox Hospital.	

Typhus, &c.:	duration
WESTMINSTER; St. Margaret.	duration
M. 41, fever	10 days
ST. MARTIN-IN-THE-FIELDS, Long Acre.	duration
M. 16, brain fever	*
ST. JAMES, WESTMINSTER; Berwick-street.	duration
M. 28, febris simplex, terminating with typhoid symptoms	*
ST. MARYLEBONE; All Souls.	duration
F. 13, { gastric fever	4 days
{ typhus	3 days
F. 54, cynanche maligna	7 days
F. 24, bilious fever	6 days
F. 8, fever	3 weeks
F. 72, febris	*
The Rectory.	duration
F. 26, typhus	1 week
F. 63, typhus	*
St. Mary.	duration
M. 3, inflammatory fever	*
Christ Church.	duration
M. 8, fever—pneumonia	9 days
ST. PANCRA'S; Tottenham.	duration
M. 61, fever	7 days
Somers Town.	duration
M. 12, { typhus	13 days
{ peritonitis	3 days
Kentish Town.	duration
M. 1, pneumonia—fever	*
ISLINGTON; East District.	duration
M. 63, fever	5 days
F. 11, fever	3 weeks
ST. GILES IN THE FIELDS; South District.	duration
F. 55, fever	12 days
F. 5, typhus	3 weeks
North District.	duration
F. 67, fever	*
STRAND; St. Clement Danes.	duration
F. 2, { mesenteric disease—fever	7 weeks
{ bronchitis	*
F. 14, typhus gravior	5 weeks
HOLBORN; St. Andrew, East.	duration
F. 21, fever	25 days
F. 34, fever	10 days

Typhus, &c. (continued):	duration
ST. LUKE; City-road.	duration
M. 1, fever—diarrhoea	7 days
F. 1, cynanche maligna	7 days
CITY OF LONDON; South District.	duration
M. 55, typhoid fever	14 days
F. 39, febris	10 days
SHOREDITCH; Hoxton New Town.	duration
F. 4, typhus	*
Holywell and Moorfields.	duration
M. 17, synochus	14 days
M. 7, fever	6 days
F. 5, malignant sore throat	*
St. Leonard.	duration
M. 1, fever—effusion on the brain	8 days
Haggerstone West.	duration
M. 6 mon., continued fever	5 weeks
BETHNAL GREEN; The Green.	duration
M. 6, fever	4 days
WHITECHAPEL; Mile End, New Town.	duration
F. 2, fever	*
North District.	duration
M. 67, typhus	*
M. 1, synochus—diarrhoea	*
F. 2, continued fever	2 months
F. 69, synochus and infirmities of age	*
F. 28, typhus	*
ST. GEORGE IN THE EAST; St. Mary.	duration
M. 6, typhus	3 weeks
St. John.	duration
M. 61, fever—catarrh	*
M. 61, fever	*
F. 54, fever	*
STEPNEY; Limehouse.	duration
F. 26, typhus	14 days
Mile End, Old Town (Upper).	duration
F. 27, typhus	21 days
Mile End, Old Town (Lower).	duration
F. 5, { fever	14 days
{ small pox	8 days
{ vaccinated in infancy.	
POPLAR; Bow and Bromley.	duration
M. 29, typhus	17 days
F. 16, { hypertrophy	7 years
{ fever	14 days
ST. SAVIOUR; St. Saviour.	duration
M. 38, typhus—bronchitis	*
Christchurch.	duration
M. 32, { paralysis	several months
{ fever	10 days
M. 9, { typhus	3 weeks
{ bronchitis	*
BERMONDSEY; The Leather Market.	duration
F. 79, fever—debility	*
St. Mary Magdalen.	duration
M. 1, typhus	17 days
St. James.	duration
M. 56, { pneumonia	6 days
{ typhus	*
ST. GEORGE, SOUTHWARK; Kent Road.	duration
F. 30, { gastric fever	*
{ bronchitis	14 days
F. 46, fever—pneumonia	*
London Road.	duration
M. 32, { typhus	*
{ pneumonia	1 month
ST. MARY, NEWINGTON; St. Peter, Walworth.	duration
M. 53, fever	*
F. 64, fever	10 days
LAMBETH; Church (1st part).	duration
M. 26, typhus gravior	*
Kennington (1st part).	duration
F. 16, fever—convulsions	7 days
Brixton.	duration
F. 21, { erysipelas	7 days
{ fever	7 days
CAMBERWELL; Camberwell.	duration
M. 64, typhus	*
St. George.	duration
M. 72, fever	*
GREENWICH; St. Nicholas, Deptford.	duration
M. 57, synochus	7 days
M. 60, typhus	9 days
Greenwich West.	duration
M. 26, { typhus	5 weeks
(p.m.) { ulceration and perforation of the bowels	*
WANDSWORTH AND CLAPHAM; Clapham.	duration
F. 69, { English cholera	1 week
{ typhoid fever	3 days
Streatham and Tooting.	duration
F. 6, fever—bronchitis	*
See Hospital Returns.	

Remittent Fever:	duration
M. 4, remittent fever	*
M. 1, remittent fever	*
F. 1, { remittent fever	1 month
{ bronchitis	2 weeks
F. 5, { pertussis—remittent fever	4 weeks
{ convulsions	*
F. 2, remittent fever	7 days
Syphilis:	duration
F. 5 weeks, congenital syphilis.	
M. 3 mon., syphilis, secondary	3 months
Malformation:	duration
F. 1 mon., { bowel impervious—(natural defect)	
(p.m.) { inanition.	
M. 9 days, congenital malformation of the rectum.	
Hernia:	duration
F. 53, { umbilical hernia	1 year
{ strangulated	35 hours
{ crural hernia	*
F. 56, { strangulation	3 days
{ operation	30 hours
See Return of King's College Hospital.	
Diabetes:	duration
M. 29, diabetes, terminating in consumption	2 years
Stone:—No deaths registered from this cause.	duration
Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	duration
F. 22, puerperal fever	6 days
{ pleuro-pneumonia	4 days
{ labour supervening before the symptoms were fully developed, terminated in 24 hours with a living child, at full period.	
F. 22, puerperal fever	*
F. 19, (post mort.), puerperal peritonitis	8 days
F. 26, { puerperal peritonitis—gangrene	*
{ 5 days after delivery.	
F. 32, from exhaustion 7 days after confinement, caused by long standing disease of liver and lungs.	
F. 37, miscarriage—peritonitis	10 days
F. 28 (inquest), natural; from puerperal convulsions before delivery	6 hours
F. 25, { puerperal peritonitis	*
{ 5 days after delivery.	
F. 24, { puerperal peritonitis	3 days
{ 7 days after labour.	
F. 31, hæmorrhage after labour	*
Delirium Tremens:—No deaths registered from this cause.	duration
Intemperance:	duration
M. 55 (inquest), intemperate use of spirituous liquors	*
M. 43 (inquest), disease of the lungs, with severe cough of long duration—drunk two days before death.	
F. 56, { diarrhoea	1 month
{ bronchitis	5 days
(habitual intemperance)	
M. 53 (inquest), natural—accelerated by excessive drink	same day
M. 29, { intemperance	*
{ delirium tremens	4 days
Præcipation:	duration
M. 1, takes mesenterica	6 months
(aggravated by imperfect ventilation and improper food).	
See Return of St. Bartholomew's Hospital.	
Want of Breast-milk:	duration
M. 10 mon., inanition for want of breast-milk	*
F. 9 mon., atrophy from weaning	14 days
F. 4 mon., diarrhoea from want of breast-milk	2 months
F. 6 days, inanition	*
Purpura:	duration
M. 71, bronchitis—purpura	6 days
Hæmorrhage:	duration
M. 41, rupture of a blood vessel	*
Hæmatemesis:	duration
F. 23, gastritis—hæmatemesis	7 days
F. 54, { hæmorrhage	12 days
{ melæna	*
Miscellaneous Causes:	duration
F. 15 mon., ulceration of groin, mortification of thigh and abdomen, from obnoxious effluvia at Dorset Place, Bride Street, Liverpool Road (the drainage most defective)	9 days
{ debility and emaciation	3 years
F. 29, { œdema of lungs—relieved 10 days before death.	
{ granular disease of kidneys	*
M. 16, { disease of the heart	*
(post mort.) { suffocation from effusion into the thorax.	
M. 3, scarlet fever	*
(death accelerated by drinking cold water.)	
F. 37, { polypos uteri	several years
(post mort.) { ligature applied—death 7 days after.	

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 29; apoplexy, 4; intemperance, 3; disease of the heart, 2; bronchitis, 2; disease of the lungs, 2; convulsions, 2; other specified causes, 5; "natural death," "visitation of God," "found dead," &c., 12.—TOTAL, 61 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 25.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn till 3h. p.m. Positive with moderate tension during the remainder of the day.		The sky was generally covered with cirrostratus and scud till 9h. a.m. Detached portions of cumuli were prevalent during the afternoon, and the sky was cloudless afterwards till midnight.
MON.	Nothing was shewn till noon; positive with variable tension afterwards till 10h. p.m. At midnight nothing was shewn.		The sky was generally clear throughout the day except between noon and 4h. p.m., during which interval of time portions of cirri and scud were prevalent.
TUES.	Nothing was shewn during the remainder of the week.		The sky was cloudless till 5h. a.m. and overcast with cirrostratus during the remainder of the day.
WED.			The amount of cloud was very variable till 7h. a.m., and the sky was overcast afterwards till noon. From noon till 6h. p.m. about one-half of the sky was covered, and it was overcast afterwards till midnight. The prevailing clouds were cirrostratus, cumulostratus and scud.
THURS.			The sky was overcast till noon, and about three-fourths of it were covered till 4h. p.m., and it overcast afterwards till midnight. The prevailing clouds were cirrostratus and scud.
FRID.			The sky was generally overcast with cirrostratus and scud throughout the day.
SAT.			The sky was overcast with cirrostratus and scud throughout the day.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 46.5; and the mean reading at 7h. 30m. P.M., was 52.5; the mean readings at the Royal Observatory for the same times were 46.2 and 51.5 respectively.

# Births and Deaths registered in London,

During the Week ending Saturday, October 9th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 40. (The tabular abstract on the first page is for the week ending Saturday, Oct. 9th. The following selection of cases is made from the returns for the week ending Oct. 2nd.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

#### Fractures and Contusions:—

	duration
In St. George's Hospital, carpenter, 35 (post mort.), fracture of the skull—fell from a scaffold when at work, at a house in Grosvenor Square .....	6 hours
M. 37, (injury to the head .....	22 days
(no inquest) meningitis .....	8 days
In Charing Cross Hospital, call-boy of a steamboat, 14 (post mort.), fracture of the skull, from the boiler bursting of the "Cricket" steamboat, at Fox-under-the-Hill pier .....	5 hours
M. 2, fell on his head from a loft—overbalanced himself when trying to catch a strawberry basket .....	same day
Wife of a lampighter, 46, suicide by throwing herself from a window at the 2nd floor .....	*
In King's College Hospital, 14 (post mort.), fracture of skull—fell from a scaffold when at work, at a house at Serl's Place .....	5 days
F. 82, died from the consequences of a fall upon her hip, happening at a very advanced period of life .....	*
M. 44 (no inquest), compound dislocation of the elbow joint—erysipelas .....	11 days
In St. Bartholomew's Hospital, plasterer, 71, fracture of his left thigh, from accidentally slipping down .....	10 weeks
In St. Bartholomew's Hospital, carpenter, 66, bronchitis, arising from injury to his ribs, by falling from a ladder .....	3 days
In St. Bartholomew's Hospital, wife of a clerk, 25, fracture of her right ankle; also internal injuries, caused by throwing herself from an upper window, in Gray's Inn Road (temporary insanity) .....	2 days
In London Hospital, chimney sweep, 32, accidental, by a fall from a roof to the ground .....	6 weeks
In London Hospital, glazier, 18, accidental, by a fall on his head, through a skylight, at the Mint .....	same day
M. 4, accidental death, by a fall out of a basket, carried on the shoulder .....	11 days
F. 15 morn, natural death, accelerated by a fall, causing congestion .....	*
M. 61 (post mort.), manslaughter against a male person unknown, effusion on the brain, from blows and falls .....	*
Merchant's clerk, 24, fractured skull—accidental fall out of a second floor window .....	9 hours
Labourer, 39, death accelerated by a fall down stairs, accidentally, when in a weak state of body .....	*
F. 2, water on the brain, from concussion, caused by an accidental fall against a door cell .....	4 weeks

#### Fractures and Contusions (continued):—

	duration
M. 62, rupture of the bladder, from an accidental fall, whilst running .....	*
In Dreadnought Hospital, seaman, 59, injuries from broken ribs and left leg, from a case falling on him, whilst at work on board the "Severn," in the West India Docks .....	5 days
In St. Bartholomew's Hospital, furrier, 46 (post mort.—inquest), mortification of both hands, arising from a bad state of health, accelerated by a fall down stairs, whilst intoxicated .....	4 days
M. 53, injuries to his head, accidentally caused by being thrown out of a cart .....	*
In St. George's Hospital, a pipemaker, 50 (post mort.), secondary deposit in the lungs, fracture of left thigh—kicked by one of two horses drawing an omnibus, having slipped and fallen, by striking the horse with a stick, when getting on the omnibus .....	22 days
In St. George's Hospital, M. 79 (post mort.), fractured ribs, penetrating left lung—knocked down and trampled on by the horses of an omnibus, at Knightsbridge .....	19 hours
Cabriolet driver, 36 (post mort.), fracture of the 4th cervical vertebra, causing suffocation—fell from the driving seat of a hackney cabriolet .....	2 days
In St. George's Hospital, son of a chair-maker, 5 (post mort.), fracture of the base of the skull—run over by the wheel of a brick cart, when sweeping the brick dust from under the cart—horse suddenly moving on .....	10 days
Son of a plumber, 4, accidental death, from the kick of a horse on his head .....	4 days
In St. Bartholomew's Hospital, carman, 49 (post mort.), fracture of his skull, and laceration of his brain, by being thrown from a chaise-cart, the horse having taken fright .....	18 hours
Warchouseman, 26, concussion of the brain, by falling out of a chaise, from the horse stumbling, in the Goswell Road .....	*
M. 3, accidental death—run over by a parcel cart .....	instantly
Daughter of a hair-dresser, 5, laceration of some internal organ, from the wheel of a cart accidentally passing over the body .....	*
M. 63, rupture of a blood-vessel of the spinal column, by accidentally falling off a cart .....	3 days
M. 68, injuries received from being accidentally thrown from his cart—fracture of the base of the skull .....	instantly
Waterman and lighterman, 27 (p.m.), rupture of a blood-vessel on the brain, produced by an accidental fall from the box seat of a cabriolet, when intoxicated .....	3 days

#### Wounds:—

	duration
In St. George's Hospital, a sawyer, 36 (post mort.), peritonitis and pleurisy, after a wound on the left knee, which he struck with an axe, when at work, at Hampton .....	5 days
F. 20, wound in the throat, extending to the cervical vertebrae—tripped over a box, when dancing across a room, and fell upon an earthenware basin upon the floor .....	5 minutes
Labourer, 40, cut throat while insane—lived half an hour, having attempted in the interval to drown himself .....	*
F. 31, cut throat with a razor, carelessly left by her paramour (of unsound mind) .....	*
M. 52, suicide, by cutting his throat with a razor—insane .....	*
F. 36, cut her throat in a temporary state of insanity .....	*
F. 26, cut her throat in a temporary state of insanity .....	immediate
F. 32, found dead in the River Thames, with an incised wound under the chin, and extravasation of blood under the scalp—immersed about 12 days .....	*
Drowning:—	
F. 23, suicide by drowning herself in the River Thames .....	*
A hawker, 33 (post mort.), drowned—thrown into the River Thames, on the bursting of the boiler of the "Cricket" steamboat (when a passenger), at Fox-under-the-Hill pier .....	instantly
A hawker of fruit, 24, drowned—thrown into the River Thames, on the bursting of a boiler of the "Cricket" steamboat (when a passenger), at Fox-under-the-Hill pier .....	instantly
A watchmaker, 23, drowned—thrown into the River Thames, on the bursting of a boiler of the "Cricket" steamboat, in which he was a passenger, at Fox-under-the-Hill pier .....	instantly
Engineer, 18 (post mort.), drowned—thrown into the River Thames, on the bursting of a boiler of the "Cricket" steamboat, in which he was a passenger, at Fox-under-the-Hill pier .....	instantly
Tobaccoist, 29 (post mort.), found drowned in the Regent's Canal—how the body came into the water unknown .....	*
Cabinet-maker, 24, drowned himself, by putting his head into a pail of water, being at the time of unsound mind .....	*
M. 18, accidentally drowned, by falling from the brig "Meldon," into the River Thames .....	*
M. 30, found dead in the Regent's Canal basin, without marks of violence, apparently drowned—immersed about .....	12 hours

# RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Drowning (continued):—	duration
A rigger, 63, accidental from drowning, having fallen from and together with a mast, from a vessel, in the River Thames .....	*
A male infant, found dead in the Regent's Canal	*
Son of a lighterman, 8, drowned by falling into the River Thames, whilst shoving a hoat off, from a barge—under water.....	5 hours
M. 49, found drowned—how came into the water no sufficient evidence .....	*
Butcher, 57, drowned—no evidence how he came into the water .....	a few days
Wife of a plasterer, 32, drowned, but no evidence how she came into the water—under water about a week—body severely bruised before death.	*
M. 32, apparently from drowning—no marks of violence—body decomposed.	*
M. 27, accidentally drowned in the River Thames, by falling out of a barge.....	*
M. 19, accidentally drowned in the River Elbe, at Hamburgh.	*
Son of a mariner, 10, accidentally drowned whilst bathing in the River Thames ....	10 minutes
Soldier, 24, casually drowned in the Royal Arsenal Canal, whilst bathing .....	*
Son of a stoker, 13, accidentally drowned in the River Thames, at Woolwich .....	*
M. 16, accidentally drowned in the River Thames, by falling overboard from a brig	*
M. 2, accidentally drowned in a pond .....	*
M. 47, suicide by drowning—temporary insanity	*
A labourer, 40, apparently from drowning....	*
A clerk, 53, supposed from drowning.....	*
M. —, found in the River Ravenshourne.	*
M. —, found in the River Thames.	*
Sailor, 13, accidentally drowned .....	*
F. —, apparently from drowning—no evidence how caused—body much decomposed .....	*

Drowning (continued):—	duration
F. 24, suicide by drowning, whilst in a state of intoxication .....	*
Son of a labourer, 8, drowned accidentally in the River Thames, by falling off a wharf ..	9 days
Waterman, 43, accidentally drowned in the River Thames—collision between the boat the deceased was in, and a steamboat—under water 6 days	*
<b>Hanging and Suffocation:—</b>	
M. 1 (post mort.), suffocated by the face being accidentally pressed against the bed-clothes by his father, whilst asleep—found dead in bed.	*
M. 7 wks., suffocated by turning accidentally on his face in bed—had weakness of the back.	*
Carpenter, 72, suicide by hanging—of unsound mind.	*
F. 44, suicide by hanging herself with a neckerchief .....	*
Widow of a tobacconist, 63, hanged herself by a cord to a hook in the wall (temporary insanity).....	a few minutes
Labourer, 51, hanged himself in a loft, being at the time of unsound mind.....	*
M. 55, hanged himself, in a temporary state of insanity.....	*
F. 5 wks., found dead in bed, apparently from suffocation, but without marks of violence.	*
M. 10 wks., accidentally overlaid.....	*
Daughter of a labourer, 6, smothered by falling into a privy .....	*
M. 53, suicide by hanging—temporary derangement .....	*
M. 41, suicide by hanging—temporary derangement .....	*
M. 10 mon., smothered by accidentally falling into a privy .....	*
Soldier, 19, suicide by hanging—temporary insanity.....	*

Burns and Scalds:—	duration
F. 63, accidentally burnt in her bed room ....	*
In London Hospital, sawyer's son, 4, accidental, from burns, by clothes catching fire .....	same day
In London Hospital, gardener's son, 4, accidental burns from clothes catching fire ....	1 day
Daughter of a labourer, 2, ulceration of the howels from having been accidentally scalded on the breast with hot toast and water, by another child in the work-house.....	13 days
F. 2, accidentally scalded by falling into a saucuppan of hot water.....	7 weeks

## Poison:—

M. 24, poisoned himself, not being in a sound state of mind.....	*
Wife of a hosier, 37, suicide with oxalic acid, after a fit of passion (not known if insane) 8 hours	*
F. 72, the essential oil of bitter almonds taken, whether to destroy life or otherwise not ascertained.	*
Son of an innkeeper, 2, accidentally killed by swallowing some corrosive poison .....	*
Wife of a cooper, 47—arsenic—wilful murder against the husband.	*
F. 27, suicide by sulphuric acid, temporary insanity.	*
Daughter of a shoemaker, 8 mon., from drinking a solution of saltpetre by chance.	*
M. 50 (post mort.), died from having swallowed landamm when of unsound mind, brought on by excessive drinking.....	28 hours
F. 42, natural death by poisoning—suspected by medicine.	*

## SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

Consumption H:—	duration
M. 31, phthisis .....	14 months
F. 33, phthisis .....	9 months
<b>St. George's H:—See Violent Deaths.</b>	
<b>Westminster H:—</b>	
M. 56, pleuro-pneumonia .....	*
<b>Charing Cross H:—</b>	
M. 17 (post mort.), acute rheumatism, followed by vegetations on the semilunar valves of the aorta, and on the mitral valves, with effusion in the thorax and abdomen—nutmeg liver .....	*

(p.m.) { pneumonia .....	4 days
<b>not vaccinated.</b>	
F. 2, small pox, natural.....	*
M. 7, variola .....	3 weeks
<b>vaccinated without effect.</b>	
F. 2, natural death, supposed small pox.....	*
<b>no medical attendant.</b>	
<b>See Return of Small Pox Hospital.</b>	

<b>Syphilis:—</b>	
M. 4 mon., infantile syphilis .....	2 months
<b>Malformation:—</b>	
M. 12 days, spina bifida.	*
M. 3 weeks, { takes mesenterica .....	17 days

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 99; apoplexy, 17; disease of the heart, 7; intemperance, 5; enteritis, 3; convulsions, 3; disease of the brain, 2; hæmorrhage, 3; privation, 1; other specified causes, 19; "natural death," "visitation of God," "found dead," &c., 39.—TOTAL, 198 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 44.

Hernia:—	duration
M. 75, strangulated hernia .....	*
<b>Diabetes:—No deaths registered from this cause.</b>	
<b>Stone:—</b>	
<b>See Return of University College Hospital.</b>	
<b>Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.</b>	
F. 36, childbirth.....	*
F. 31, { childbirth.....	5 days
<b>{ inflammation of the uterus .....</b>	
F. 21, childbirth.....	*
F. 36, { typhus .....	3 weeks
<b>{ childbirth (still born child).....</b>	
<b>See Return of Middlesex Hospital.</b>	
<b>Delirium Tremens:—</b>	
M. 38, { pleuro-pneumonia .....	5 days
<b>{ delirium tremens .....</b>	
F. 38, delirium tremens.....	3 days
F. 46, delirium tremens .....	9 months
<b>See Return of Middlesex Hospital.</b>	

<b>Intemperance:—</b>	
M. 59 (inquest), spirituous liquors taken incessantly to produce intoxication .. for many weeks	*
F. 37, diarrhoea .....	5 weeks
<b>with exhaustion of constitutional powers, by using spirits and morphia as stimulants for many years.</b>	
M. 40 (inquest), natural death; delirium tremens resulting from excessive drinking of ardent spirits .....	*
F. 45, diseased liver, from excessive drinking	*
Widow 48, (inquest), inflammation of the brain induced by intemperance .....	*
M. 44 (post mort., inquest), died from exhaustion, produced by a fit of intoxication ....	2 hours
M. 36 (post mort., inquest), chronic inflammation of the liver, brought on by the excessive use of ardent spirits.....	*

Privation:—	duration
F. 64 (post mort., inquest), disease of the lungs, accelerated from the want of proper sustenance and attention .....	some months
<b>Want of Breast-milk:—</b>	
M. 3 mon., deprived of natural nourishment, the mother having died.	*
F. 2 days, inanition—want of breast-milk.	*
F. 3 days, inanition—jaundice.	*
<b>Purpura:—No deaths registered from this cause.</b>	
<b>Hæmorrhage:—</b>	
M. 55 (inquest), rupture of a blood-vessel near the heart.....	sudden death
M. 73, { paralysis .....	20 years
<b>{ hæmorrhage .....</b>	
M. 33 (inquest), natural, sudden, from a rupture of a blood-vessel on the lungs.	6 days
Wife of a coal-dealer, 64 (inquest), natural; hæmorrhage from the rupture of a blood-vessel of the lungs in the act of coughing, 2 minutes	*
<b>Hæmatemesis:—</b>	
F. 59, hæmatemesis .....	*

<b>Miscellaneous Causes:—</b>	
M. 6 (post mort.), apoplexy—diseased brain—brain congested, clot of blood in the right lateral ventricle, a small clot also in the left; the cerebellum diseased, and its upper surface covered with extravasated blood.	*
M. 31 (post mort.), diseased kidneys—morbus Brightii, with suppression of urine, producing suspension of the functions of the brain, and organic nervous system.....	6 days
F. 46 (post mort.), disease of stomach—peritonitis .....	12 hours
<b>perforation of stomach—deposit of lymph over omentum—contents of stomach over peritoneum.</b>	
M. 57, eclampsia .....	9 years
M. 2 (inquest), natural death from mortification, arising from a blister .....	3 weeks

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 9th October, 1847.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND							Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																															
			Dry			Dew Point	Highest in the sun, as shown by a self-register- ing Thermometer	Lowest on the grass, as shown by a self-register- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12 Diff.	Greatest	Least	General Direction			Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			The sky was principally overcast throughout the day with cirrostratus and scud, with occasional gleams of sunshine.
MON.			The sky was covered with cirrostratus and scud till noon, when the clouds became broken for a short time; the sky remained cloudy during the remainder of the day.
TUES.			The sky was overcast till about 10h. a.m., after which it became partially clear, and remained so till midnight.
WED.	During this week no electricity has been shown, except at times when heavy rain was falling, during which negative electricity was exhibited, and about noon on the 8th day, when a small quantity of positive electricity was shown.		The sky was cloudless till 5h. a.m.; at this time a thick fog came up, and lasted till about 10h. a.m., after which the sky became partially clouded. At 4h. p.m. a shower of rain fell. About 5h. p.m. several flashes of lightning were seen in the S.E., followed soon after by a heavy rain, which lasted about two hours, and during which 0·24 in. fell.
THURS.			The amount of cloud varied continually till about noon, when the sky became quite overcast, and heavy rain fell; the clouds cleared off about 2h. p.m., and the sky remained cloudless till midnight. Several flashes of sheet lightning were seen in the N.E. about 5h. p.m.
FRID.			The sky was cloudless till 8h. a.m., and afterwards remained partially clear till 6h. p.m., when it became completely covered with cirrostratus and scud.
SAT.			The sky was overcast throughout the day with cirrostratus and scud; a light rain of short duration fell about 5h. a.m., and at 10h. p.m. heavy rain commenced falling.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 49°3; and the mean reading at 7h. 30m. P.M., was 53°0; the mean readings at the Royal Observatory for the same times were 49°4 and 52°0 respectively.

† The air was very nearly in a calm state during the first four days of the week, the air being in very gentle motion. The direction of the wind has been variable.

# Births and Deaths registered in London,

During the Week ending Saturday, October 16th, 1847.

ANNUAL SERIES VIII.]

Specified Ages	Deaths registered last week in London	Deaths which would have been registered if the rate of mortality had been the same as in Dorsetshire, Dec. Quarters, 1838-44.	Excess of Mortality in London during the week
0-15	421	255	166
15-35	140	125	15
35-55	146	100	46
55 and upwards	245	179	66
All Ages	953	659	294

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 41.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 16th. The following selection of cases is made from the returns for the week ending Oct. 9th.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
In Middlesex Hospital, widow, 72 (no inquest), fracture of the neck of the thighbone, from a fall .....	14 days	F. 25 (no inquest), injury of the liver by lifting, followed by peritonitis .....	*	M., person unknown, 7, drowned by falling out of a boat, into the East-County Dock, accidentally (under water about 20 minutes).	
In St. Thomas' Hospital, labourer, 28 (post mort.), concussion of the brain, caused by falling down a shaft of a tunnel, on a new line of railway, at Blackheath .....	15 hours	In St. Thomas' Hospital, son of a shepherd, 14, fracture of his left leg, by slipping into a threshing machine, at Chipstead, Surrey ..	20 days	Hanging:— Commission merchant, 60, suicide by hanging—of unsound mind.	
F. 68, rupture of a bloodvessel of the brain—manslaughter against James Bruce, by throwing her down .....	*	Extraction of a tooth:— F. 37, natural death, from congestion of the vessels of the brain, producing fits, after the extraction of a tooth .....	*	M. 52, suicide by hanging himself—delirium tremens, resulting from habits of intemperance.	
M. 42, fractured ribs, apparently from pressure on the chest, his body being found partly hanging over his crib—but how caused unknown .....	*	Drowning:— Daughter of a labourer, 18, found dead in the Regent's Canal, without marks of violence.		Burns and Scalds:— Son of a carman, 3, effects of accidental burns ..	*
In Charing Cross Hospital, carman, 49, mortification, following amputation of the right thigh, which was crushed by the tailboard of a cart, laden with stones, on the cart tilting back, 20 days amputation .....	6 days	F., person unknown, newly-born, found dead, without marks of violence, in the Regent's Canal.		F. 2, scalds by a saucepan of boiling water falling from a fire, a poker having been withdrawn from under it, by a child aged 6 years .....	24 days
In St. Thomas' Hospital, carrier, 50 (post mort.), rupture of the small intestine, and some large bloodvessels in the abdomen, from being run over by an omnibus, in the Borough High Street .....	44 hours	M. 8, found drowned.		In Guy's Hospital, daughter of a labourer, 1, scalded by upsetting a pot of hot coffee over herself (at Dockhead) .....	26 hours
M. 45, accidental death, by a fall from a cart, which he was driving .....	instant	M. 12, accidentally drowned, whilst bathing in the River Lea.		Son of a gilder, 1, accidental scald on the neck and chest .....	10 days
F. 38, manslaughter against her husband, William Joseph Clifton—By what means?		F. 18, found dead, without marks of violence—apparently drowned.		Poison:— Daughter of a confectioner, 16 (post mort.), arsenic taken by herself, but without intention to destroy life .....	about 8 hours
		M. 19, accidentally drowned, by throwing himself out of a boat, being alarmed at the approach of a steamboat (under water 4 ds.).		Bootmaker, 48, suicide with arsenic—of unsound mind .....	*
		Apprentice seaman, 15, accidentally drowned, by falling out of a ship's boat, into the Surrey Canal Dock (under water 20 min.).			

### SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

Consumption II:—	duration	Charing Cross II:—	duration	Royal Free II:—	duration
M. 36, phthisis .....	11 months	M. 56 (post mort.), phthisis pulmonalis—cirrhosis of the liver—Bright's disease of the kidney .....	*	M. 42, { disease of heart, lungs, and kidneys in hospital 1 month.	*
St. George's II:—		F. 3 mon. (inquest—post mort.), natural inflammation of the mucous membrane of the colon .....	*	M. 15, { typhus .....	*
M. 2, inflammation of the lungs .....	*	See Violent Deaths.		F. 55, { erysipelas .....	*
M. 23 (post mort.), disease of the lungs, and diabetes .....	*	Middlesex H:— F. 44, anasarca .....	1 year	Small Pox II:— M. 19, small pox, confluent (unprotected) ...	13 days
Westminster II:—		See Violent Deaths.		F. 26, small pox, confluent (unprotected) ...	12 days
F. 33, hepatic ascites .....	— months	University College H:— F. 36 (inquest), extravasation of blood on the brain, produced by a natural cause .....	*	{ small pox, confluent. ....	7 days
M. 55 (post mort.), gastro-intestinal fever ..	7 days			F. 27, { said to have been vaccinated at Wal- lingworth—no cicatrix.	
M. 19 (post mort.), phthisis pulmonalis .....	— months

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn during the day.		The sky was generally overcast throughout the day. The prevailing clouds were cirrostratus and scud. Rain was falling at intervals during the morning.
MON.	Positive and tension moderate from 2h. p.m. to 10h. p.m. Nothing was shewn at any other times.		About three-fourths of the sky were covered till 8h. p.m., and it was nearly clear afterwards till midnight. Cirrostratus and scud were the prevailing clouds. Rain was falling occasionally during the morning.
TUES.	Positive and tension variable till 8h. p.m. Nothing was shewn afterwards.		The sky was cloudless till 2h. a.m., and about one-half covered till 8h. p.m. Overcast from 8h. p.m. till midnight. Cirrostratus, fleecy clouds, and scud were the prevailing clouds.
WED.	Nothing was shewn during the day.		Overcast till 2h. p.m.; from that time till 6h. p.m. the sky was mostly clear, and overcast afterwards till midnight. Cirrostratus was the prevailing cloud.
THURS.	Nothing was shewn during the day.		The sky was overcast throughout the day. Cirrostratus was the prevailing cloud.
FRID.	Nothing was shewn till noon. During the remainder of the day positive, with moderate tension.		Overcast till 8h. p.m., and nearly cloudless afterwards till midnight. Cirrostratus and scud were the prevailing clouds.
SAT.	Positive and tension moderate at 1h. and 3h. a.m., and at 4h. p.m. Nothing was shewn at any other times.		Generally overcast throughout the day with cirrostratus and scud.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Heury, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

• In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 51.3; and the mean reading at 7h. 30m. P.M., was 55.2; the mean readings at the Royal Observatory for the same times were 51.1 and 54.3 respectively. The readings of the thermometer on the mainmast on Tuesday at 2h. p.m. was 71°.

† The direction of the wind for the week has been variable; the air has been in very gentle motion.

# Births and Deaths registered in London,

During the Week ending Saturday, October 23d, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 42.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 23rd. The following selection of cases is made from the returns for the week ending Oct. 16th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds (continued):—	duration
F. 5, unknown whether by natural disease or an accidental fall .....	*	Carpenter, 38, suicide—cut his throat with a razor, being at the time of unsound mind..	instant	Son of a cigar maker, 1 (no inquest), severe scald 3 days	
Wife of a carpenter, 54, concussion of the nervous system, from falling down stairs accidentally, being intoxicated.				convulsions .....	6 hours
M. 84, fracture of the thigh bone, from being run over by a cart .....	*	Drowning:—		How the injury occurred should have been stated.	
M. 35, crushed accidentally between the wheels of a saw mill.....	*	M. 39, drowning—slipped on jumping from a steamboat to Cricketer's pier, and fell into the water (under water 8 days).		Poison:—	
M. 45, diseased liver .....	*	F. 17, found dead in the waters of the London Docks, apparently drowned.		In Hackney, two boys, aged respectively 1 year, and 11 weeks, natural death, from mesenteric disease, accelerated by the noxious and poisonous exhalations of a common sewer, open and exposed.....	*
(no inquest) { mortification from injury to the arm.....	3 days	Burns and Scalds:—		Exposure, or Immersion:—	
How was injury caused?		Son of an omnibus driver, 4, burnt by his clothes taking fire accidentally .....	11 hours	M. 58 (no inquest), obstinate constipation of bowels, from a very severe cold, caused by getting wet .....	*

### SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn during the first three days of the week.		The sky was overcast with cirrostratus till 1h. p.m., and cloudless afterwards. A dense fog prevailed during the morning and evening.
MON.			The sky was generally overcast during the day. Cirrostratus and scud were the prevailing clouds. Rain fell at intervals during the morning and afternoon.
TUES.			The sky was clear till 6h. a.m., and nearly overcast from that time till 2h. p.m. Nearly cloudless till 9h. p.m., and overcast afterwards till midnight. Cumuli, cirrocumuli, cirrostratus, and scud were the prevailing clouds. Rain was falling at 1h. 20m. a.m.
WED.	Nothing was shewn till noon. From noon till 5h. p.m. positive with tension variable. Nothing was shewn afterwards.		Overcast till 7h. a.m., and about one-third of the sky was covered during the remainder of the day. Cumuli, cirrostratus, and scud were the prevailing clouds. At 11h. p.m. the upper arc of a lunar halo was visible, of 22½ radius. Rain was falling between 1h. and 2h. a.m.
THURS.	Nothing was shewn till noon. During the remainder of the day, positive with strong tension, except at midnight, when nothing was shewn.		The sky was nearly overcast till 10h. a.m., about one-half covered till 5h. p.m., and generally clear afterwards. Cirrostratus and scud were the prevailing clouds. A heavy shower of rain fell at 6h. a.m.
FRID.	Nothing was shewn during the remainder of the week.		Clear till 9h. a.m., and about three-fourths of the sky were covered during the remainder of the day. Cirrostratus and scud were the prevailing clouds. The magnets were greatly disturbed during the day.
SAT.			Overcast with cirrostratus and scud throughout the day. Rain commenced falling soon after noon, and continued falling heavily at intervals during the remainder of the day. After 1h. 30m. p.m. the readings of the barometer declined rapidly; its lowest reading occurred at 7h. 30m. p.m., which was 29.258 in. The magnets were very greatly disturbed during the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Heury, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 50.9; and the mean reading at 7h. 30m. P.M., was 52.7; the mean readings at the Royal Observatory for the same times were 51.2 and 52.3 respectively.

† The mean direction of the wind for the week was S.S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, October 30th, 1847.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 48.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 30th. The following selection of cases is made from the returns for the week ending Oct. 23rd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Poison:—	duration
M. 2 mon. (no inquest), fell out of the arms of nurse, when on the street	*	Son of a servant, 8 mon., found dead in the Regent's Canal, at Hoxton, appended to his mother, also apparently drowned.		M. 17, poisoned himself with oil of bitter almonds, in a state of temporary derangement	*
Licensed victualler, 57, accidental death, by a fall from a ladder	*	F. servant (single woman), 24, found dead in the Regent's Canal, at Hoxton, apparently drowned, without marks of violence.		Daughter of a lace porter, 10, accidentally poisoned by an irritant and poisonous potion from berries, supposed to be innoxious—given without intention to destroy life	*
F. 59, natural death, accelerated by a fall, causing wound and rupture of a vessel of the head	*	Cooper, 23, drowned in the Surrey Canal—no proof how he came into the water.		Widow of a stationer, 76, natural death, accelerated by laudanum, taken medicinally, and without intention to destroy life	*
M. 19, mortal concussion of the body, by falling off a moveable crane, 20 feet high	instant	M. (person and age unknown), found in the River Thames.		M. 8 days, convulsions, resulting from too great a quantity of aniseed administered to him	*
F. 56, injury of the head	3 weeks	Hangings and Suffocation:—			
(no inquest) erysipelatos inflammation	12 days	Retired licensed victualler, 84, suicide by hanging himself, being of unsound mind, from bodily infirmity and old age.			
It should have been stated how the injury was caused.		Daughter of a plasterer, 1 day, suffocated at the breast of her mother, accidentally.			
Wounds:—					
Powder refiner, 30, cut his throat in a temporary state of insanity	*				

### SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

Consumption II:—	duration	Fever II:—	duration	St. Thomas' II:—	duration
F. 41 (post mort.), phthisis	14 months	M. 63, fever	about 8 days	F. 50, corroding ulceration of uterus	some years
St. George's II:—		in hospital 30 hours.		F. 42, febris	18 days
M. 11, hectic fever—abscesses in lower extremities	*	M. 28, { pneumonia	14 days	M. 21, gangrene of lung—syphilis	3 weeks
M. 46, fever	*	(post mort.) { consolidation of right lung—		M. 26, diseased heart—hemorrhage	8 weeks
M. 40, anasarca—chronic pleurisy	*	pleurisy—pericarditis—lymph		M. 41, ascites	*
M. 4, ophthalmia	*	and pus in pericardium	about 4 days	M. 37, { phthisis	7 months
M. 39 (post mort.), chronic pleurisy—anasarca	*	(post mort.) { typhus	10 days	(post mort.) { hæmoptysis	*
—disease of the kidneys	*	in hospital 3 days.		M. 23, { albuminuria	8 months
M. 43, anasarca—diseased heart	*	M. 62, { typhus	12 days	(post mort.) { typhus	14 days
M. 39, diseased heart	*	(post mort.) { in hospital 4 days.		M. 63 (post mort.), disease of the bladder, and stricture	2 years
F. 59 (post mort.), scirrhous of mamma, uterus, liver, and intestine, causing stricture	*	F. 41, { typhus—effusion of serum beneath		M. 47, strangulated hernia—operation—inflammation	*
F. 45, dropsy and diseased heart	*	(post mort.) { arachnoid	*	M. 18, tuberculous disease of the kidneys—effusion on the brain	*
M. 34 (post mort.), paralysis—serofulous tubercle in the medulla oblongata—sloughing of back—inflamed bladder and kidneys	*	F. 30, { fever	about 30 days	Guy's II:—	
		(post mort.) { relapse	8 days	M. 38, diffused inflammation of the cellular tissue about the arm and throat	*
Westminster II:—		phthisis	*	M. 39, pleuro-pneumonia	8 weeks
M. 12, caries of temporal bone, perforating into the brain	7 weeks	Small Pox II:—		M. 38, phthisis	*
Charing Cross II:—		F. 5, small pox, confluent (unprotected)	21 days	M. 19, anasarca	5 weeks
F. 23 (post mort.), sero-purulent effusion in left side of chest—ulceration of the pleura, the consequence of preceding inflammation	*	M. 25, { vaccinated when young in Germany—		M. 36, { disease of aorta	13 months
F. 18, acute mania—serous effusion between dura mater and cerebrum	1 week	one good cicatrix.	*	(post mort.) { anasarca	*
Middlesex II:—		M. 33, { vaccinated in Wiltshire—one good cicatrix.	*	F. 14, typhus	3 weeks
F. 48, cancer uteri	*	F. 23, { small pox, confluent (unprotected)	*	M. 25, sweeps' cancer	*
F. 50, cancer mamma	2 years	in hospital 26 days.		F. 42, malignant disease of the rectum	*
University College II:—No deaths registered.		King's College II:—		M. 35, stricture	*
Royal Free II:—No deaths registered.		M. 53, phthisis	many months	Royal Ordnance II:—No deaths registered.	
		St. Bartholomew's II:—		Dreadnought II:—	
		M. 19, peritonitis	*	typhus	9 days
		M. about 40, fever—dropsy—disease of the liver	*	(post mort.) { extensive ulceration of Peyer's glands, and appendix vermiformis	*
		M. 15, water on the brain	*	(post mort.) { —enlargement of the mesenteric glands.	*
		M. 27, hæmoptysis—emphysema—tubercles and cavities in the lungs	*	M. 17, { acute dysentery	3 weeks
		F. 48, hepatitis	*	(post mort.) { sloughing of the whole of the mucous membrane of the large intestine.	*
		London II:—		(post mort.) { pneumonia	6 days
		{ pneumonia	10 days	M. 39, { the right lung in a state of grey hepatization, weighing 4 lbs.	*
		M. 45, { abscesses around the pharynx and œsophagus	7 days	(post mort.) { congestion of the brain—effusion of serum into ventricles.	*
		{ delirium tremens	3 days		
		F. 48, strangulated hernia	*		

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, WANT OF BREASTMILK, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

	duration
M. 2, variola second attack—vaccinated about 21 months ago without effect.	14 days
F. 8 mon., small pox, first attack—not vaccinated.	9 days
M. 3, { confluent small pox. . . . . convulsions . . . . .	3 weeks
M. 5 mon., variola (not vaccinated).	5 days
M. 26, confluent small pox (after cow pox)	15 days
M. 10 weeks, small pox . . . . .	1 week
M. 29, small pox (not vaccinated)	12 days
F. 2, small pox (not vaccinated)	10 days
F. 10 mon., small pox (natural)	14 days
M. 2, variola confuens (without vaccination)	11 days
F. 3, variola confuens . . . . .	14 days
F. 11 mon., small pox (not vaccinated)	14 days
F. 2, variola (not vaccinated)	7 days
M. 2, confluent small pox (not vaccinated)	*
M. 2, small pox (vaccinated when 2 mon. old)	*
F. 6, small pox . . . . .	10 days
F. 2, variola . . . . .	14 days
M. 2, small pox, confluent (natural—not vaccin.)	8 days
M. 5 mon., small pox (not vaccinated)	10 days
F. 4 mon., variola . . . . .	10 days
M. 9 mon., ulceration of the mouth and general debility, the consequence of small pox (not vaccinated)	7 weeks
M. 31, small pox . . . . .	7 days
F. 1, small pox . . . . .	5 weeks
M. 3 mon., { small pox. . . . . convulsions . . . . .	1 day
M. 1, small pox (first attack—not vaccinated), 11 days	11 days
M. 6, small pox . . . . .	10 days
M. 10 mon., small pox (no medical attendant)	9 days
M. 2 small pox . . . . .	14 days
F. 8, small pox . . . . .	14 days
F. 3, variola (not vaccinated)	3 weeks
M. 1, small pox, with convulsions . . . . .	8 days
M. 3, variola . . . . .	14 days

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and weak at noon. Nothing was shewn at any other ex- amination.		The sky was generally overcast during the day with cumulostratus, cirrostratus, and scud, till 5h. p.m., and nearly clear afterwards. Rain was falling during the afternoon. At 6h. 23m. a.m. a faint streamer of an aurora borealis was seen, and between this time and 10h. p.m. occasional streamers were seen; at 10h., and again at midnight the aurora borealis was mag- nificent. The magnetic instruments were very greatly disturbed during the whole day. At about 10h. p.m. the horizontal force magnet was in a position which it had never reached since the establishment of the magnetic observatory, and such as to shew a great decrease of the horizontal component of the magnetic dip.
MON.	Nothing was shewn till 8h. p.m. From 8h. p.m. till 10h. p.m. positive with tension variable. Nothing was shewn afterwards.		The amount of cloud was variable till noon, nearly overcast till 6h. p.m., and generally clear afterwards; cirrostratus and scud were the prevailing clouds. The aurora borealis continued visible till 2h. a.m., and the magnetic instruments were disturbed till towards the evening of this day.
TUES.	Positive and tension strong from 9h. 30m. a.m. till 4h. p.m. Nothing was shewn at any other times.		One-half of the sky was covered till 9h. a.m., overcast till 6h. p.m., and clear afterwards. Cumulostratus, cirrostratus, and scud were the prevailing clouds.
WED.	Nothing was shewn throughout the day.		The sky was generally overcast throughout the day, except at 4h. a.m., when about one-third of the sky was covered; cirrostratus and scud were the prevailing clouds. Rain was falling during the afternoon and evening.
THURS.	Nothing was shewn throughout the day.		The sky was overcast with cirrostratus throughout the day. Rain was falling from 0h. a.m. till 9h. a.m.
FRID.	Nothing was shewn till 3h. 30m. p.m.; from that time till 5h. p.m. positive and weak. Nothing was shewn afterwards till near midnight, when it was positive with very weak tension.		The sky was overcast till 6h. a.m.; from that time till 2h. p.m. the amount of cloud was variable, and overcast afterwards.
SAT.	Positive and very weak at 4h. p.m.; no- thing was shewn at any other times.		The sky was generally covered with cirrostratus of a variable character throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

• In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 45.1; and the mean reading at 7h. 30m. P.M., was 52.2; the mean readings at the Royal Observatory for the same times were 45.1 and 51.0 respectively.

† The mean direction of the wind for the week was S.S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, November 6th, 1847.

1846	813	949	919	835	896	991	958	909
Average of 7 yrs	919	915	900	887	925	978	952	926
1847	1052	1143	1022	953	967	945	1052	1019

The mortality of Wandsworth and Clapham, and that of Lewisham and sub-district of Hampstead, are included in this table throughout the eight years.

DEATHS from Purpura or from Scurvy in LONDON;—

YEARS	Quarters of 13 weeks each, ending in				Total in the Year
	March	June	Sept.	Dec.	
1842	3	5	4	4	16
1843	2	1	6	4	13
1844	5	3	7	6	21
1845	2	4	11	8	25
1846	5	9	9	5	28
1847	16	25	20		

1	2	3	4
Specified Ages	Deaths registered last week in London	Deaths which would have been registered if the rate of mortality had been the same as in Dorsetshire, Dec. Quarters, 1838-44.	Excess of Mortality in London during the week
0-15	542	255	287
15-35	136	125	11
35-55	138	100	38
55 and upwards	236	179	57
All Ages	1052	659	393

In Week ending Nov. 6th, causes of Deaths were;—

(1) Certified by written statement of Medical Attendant in	980 cases
(2) Attested by Coroner, or stated by him to be "natural," "sudden," or not ascertainable, in	25 "
(3) Stated to have had no medical treatment	9 "
(4) Not certified, or not otherwise than by verbal statement	33 "
Total	1052 "

Cases included under first and second heads show a proportion to the total number, equal to 95 per cent. Under the fourth head are probably included some cases which had no medical attendance.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 44.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 6th. The following selection of cases is made from the returns for the week ending Oct. 30th.)

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

duration	duration	duration
<b>Fractures and Contusions:—</b>	<b>Fractures and Contusions (continued):—</b>	<b>Burns and Scalds (continued):—</b>
In St. George's Hospital, gardener, 40 (post mort.), fracture of cervical vertebra—fell from a walnut tree at Frogmore farm, Mortlake, when thrashing walnuts. .... 6 days	In St. George's Hospital, blacksmith and farrier, 40 (post mort.), fracture of the skull, and laceration of the brain—kicked by a horse which kicked at a mule he was shoeing in his shop, at New Manor-street, Chelsea. .... 4 days	In St. George's Hospital, bricklayer, 33, scald of the legs and back, from falling when intoxicated into hot wort, at the Star Brewery, Old Brompton. .... 7 days
In St. George's Hospital whitesmith, 52, wound in the head, extending into the lateral sinus—fell when at work on a scaffold at Archbishop Tenuison's chapel, Regent-street—his head struck the spike of railing. 5 days	M. 27 (no inquest), lumbar abscess, originating from accident. .... "	In St. George's Hospital, son of a shoe-maker, 3 (post mort.), scald of the back and thighs by the falling of a kettle from the fire, near which deceased was sitting. .... 30 days
Labourer, 43 (post mort.), fracture of the skull, and shock by falling through the well of a staircase, when at work at an unfinished house in Ennismore-place, Kensington. .... a few min.	M. 4 (post mort., no inquest), concussion of the brain. .... 35 hours	Daughter of a police constable, 8 mon. (no inq.), scald of the chest. .... 7 days
M. 25, fracture of his skull, by throwing himself out of a window in the Debtor's prison (temporary insanity). .... 10 min.	<b>Wounds:—</b>	pneumonia—meningitis. .... 2 days
Umbrella-maker, 52, accidental death from a fall down stairs. .... 3 days	M. 40, { traumatic erysipelas of the arm from slight abrasion of the (no inquest) { thumb. .... 10 days	<b>Poison:—</b>
In St. George's Hospital, labourer, 24, internal hemorrhage—fell when driving a cart in Pelham-road, Kensington—the wheels passed over his body. .... about 30 min.	jaundice. .... some time	In St. George's Hospital, servant (single woman), 20 (post mort.), corrosive sublimate in bug poison—suicide in temporary insanity, 5 days
	<b>Drowning:—</b>	M. 70, poisoned himself with prussic acid (temporary insanity). .... about 15 min.
	M. formerly a gentleman's servant, 63, suicide by drowning (insane at the time). .... duration	F. 40 (no inq.), phlegmonous erysipelas. .... 24 days
	<b>Burns and Scalds:—</b>	brought on from poison inbibed in the thumb, with excessive discharge of pus.
	M. 2, accidental burns caused by clothes taking fire. .... "	Doubtful case. In this entry it should have been stated whence the poison was derived.

### SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

duration	duration	duration
<b>Consumption II:—No deaths registered.</b>	<b>Westminster H:—</b>	<b>University College H:—No deaths registered.</b>
<b>St. George's H:—</b>	M. 36 (post mort.), febris typhoides. .... 12 days	<b>Royal Free H:—No deaths registered.</b>
M. 57, disease of the liver—dropsy. .... *	<b>Charing Cross H:—No deaths registered.</b>	<b>Fever H:—</b>
M. 27 (post mort.), urinary abscess—cavity communicating with the bladder. .... *	<b>Middlesex H:—</b>	duration
F. 46, disease of the heart and liver—erysipelas of the face. .... *	M. 32, diseased heart. .... 3 weeks	M. 40 (post mort.), typhus. .... 18 days
M. 36 (post mort.), ulcers of rectum—fistula in ano—operation—peritonitis—perforation. .... *	M. 51, diseased liver. .... 6 months	in hospital 11 days.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing was shewn during the day.		The sky was generally overcast throughout the day with cirrostratus.
MON.	Nothing was shewn till near midnight, when it was positive with weak tension.		The sky was overcast till 6h. a.m. and about one-third covered during the remainder of the day. Cirrostratus and scud were the prevailing clouds. There was an aurora at night and the magnets were disturbed.
TUES.	Nothing was shewn till noon. During the remainder of the day positive with weak tension, except at 9h. 30m. p.m. when nothing was shewn.		The sky was cloudless till 6h. p.m. and from this time till midnight there was a dense fog.
WED.	Positive and very weak at 3h. 30m. p.m.; nothing was shewn at any other times.		The sky was overcast with cirrostratus throughout the day. A dense fog prevailed during the day, and particularly during the evening.
THURS.	Nothing was shewn on Thursday, Friday or Saturday.		The sky was overcast with cirrostratus and scud throughout the day.
FRID.			The sky was generally overcast till 6h. p.m.; it was clear from that time till 10h. p.m., and overcast afterwards. Cirrostratus, decy clouds and scud were prevalent.
SAT.			The sky was partially clear till 3h. 30m. a.m. after which time it became overcast with cirrostratus and scud, with occasionally heavy rain, till midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The thermometer, whose bulb was placed in the full rays of the sun, was broken at the beginning of this week.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 48.7; and the mean reading at 7h. 30m. P.M., was 51.8; the mean readings at the Royal Observatory for the same times were 48.3 and 50.2 respectively.

† The mean direction of the wind for the week was S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, November 13th, 1847.

1843	1083	977	1133	1143	1087	1043	1257	1103
1844	974	1031	908	948	979	1002	1085	990
1845	867	797	782	785	959	955	952	871
1846	949	919	835	896	991	958	930	925
Average of 7 yrs	915	900	887	925	978	952	983	934
1847	1143	1022	953	967	945	1052	1098	1026

The mortality of Wandsworth and Clapham, and that of Lewisham and sub-district of Hampstead, are included in this table throughout the eight years.

1	2	3	4
Specified Ages	Deaths registered last week in London	Deaths which would have been registered if the rate of mortality had been the same as in Dorsetshire, Dec. Quarters, 1838-44.	Excess of Mortality in London during the week
0-15	546	255	291
15-35	154	125	29
35-55	142	100	42
55 and upwards	256	179	77
All Ages	1098	659	439

In Week ending Nov. 13th, causes of Deaths were:—

(1) Certified by written statement of Medical Attendant in .....	957 cases
(2) Attested by Coroner, or stated by him to be "natural," "sudden," or not ascertainable, in .....	58 "
(3) Stated to have had no medical treatment .....	14 "
(4) Not certified .....	69 "
Total .....	1098 "

Cases included under first and second heads show a proportion to the total number, equal to more than 92 per cent. Under the fourth head are probably included some cases which had no medical attendance.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 45.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 13th. The following selection of cases is made from the returns for the week ending Nov. 6th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

### RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Suffocation:—	duration
M. 9 mon., (no inq.), fell out of bed—fracture of left parietal bone—effusion of blood under pericranium—acute meningitis .....	5 days	M. 60, drowned no marks of violence—no proof how he came into the river (under water about 1½ hour).		F. under 1, found dead in bed without marks of violence—apparently suffocated.	
NOTE.—The following is the Coroner's return of a case of "concussion of the brain" which was imperfectly reported last week:—		M. about 23, found dead in the River Thames—cause unknown.		Burns:—	
Son of a waiter, 4 (p.m.), effects of a blow on the head—manslaughter against a boy unknown.		Sea-apprentice, 13, accidental death by a fall from a plank, and drowning, in the London Docks.		Widow of a cabinet-maker, 75, burnt in a house on fire—origin of the fire unknown—deceased was too nervous to descend the stairs and escape.	
		F. (person unknown) about 25, found dead without marks of violence—apparently drowned.			

### SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

Consumption II:—No deaths registered.	duration	Middlesex II:—	duration	Royal Free II:—No deaths registered.	duration
St. George's II:—		F. 52, erysipelas of hand and arm .....	7 days	Fever II:—	
M. 50, malignant disease of the œsophagus ..	*	F. 36, dropsy .....		M. 53, f typhus .....	12 days
F. 56 (post mort.), pneumonia—diseased kidneys ..	*	University College II:—		(p.m.) (cirrhosis of liver .....	long standing
F. 27, fever, and inflammation of the lungs ..	*	M. 56 (post mort.), albuminuria—anasarca—chronic bronchitis ..	*	in hospital 6 days.	
Westminster II:—		M. 32, { hypertrophy and dilatation, with valvular disease of the heart. } (p.m.) { albuminuria—anasarca—pulmonary apoplexy—hæmoptysis. } ..	2 years	M. 10, peritonitis .....	*
M. 56, f disease of the rectum .....	months	M. 22 (post mort.), erysipelas of the head and face—death from exhaustion .....	on the 11th day	in hospital 10 hours.	
F. 56, f erysipelas .....	4 days	M. 56 (post mort.), morbus cordis—consolidation of both lungs ..	*	M. 45, typhus .....	*
F. 25, phthisis pulmonalis .....	months	F. 60 (post mort.), stricture of rectum—constipation .....	16 days	in hospital 16 hours.	
Charing Cross II:—				F. 35, fever .....	*
M. 61 (post mort.), peripneumonia (dying when admitted) ..	*			in hospital 12 hours.	
M. 24 (post mort.), diseased kidneys—dropsy ..	*			F. 17, scarlet fever .....	11 days
				in hospital 4 days.	
				M. 43 (post mort.), typhus .....	9 weeks
				in hospital 2 days, from St. James', Westminster.	
				M. 22 (post mort.), pericarditis and pleurisy, 12 days from Lambeth.	

Small Pox II.:—No deaths registered.

King's College II.:—No deaths registered.

St. Bartholomew's II.:—

M. 5, scarlatina—anasarcæ	6 weeks
M. 29, diabetes	6 weeks
M. 54, dropsy	6 weeks
F. 20, disease of the brain	6 weeks
F. 17, dropsy	6 weeks
F. 10, atrophy	6 weeks
F. 21, vomiting of blood	6 weeks
M. 14, putrid sore throat	6 weeks
M. 21, fever—pneumonia—pleurisy	6 weeks
M. 38, disease of the heart	6 weeks

London H.:—

M. 22, diseased lungs	3 months
M. 48, { retention of urine	3 months
{ spasms	3 days
{ apoplectic clot in left hemisphere	16 days
{ half an inch layer of fully organized lymph between the reflex and loose pericardium—right kidney atrophied—fatty degeneration of left kidney—large lobulated liver	6 months
F. 18, paralysis	4 months

DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, WANT OF BREASTMILK, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

M. 1, { small pox	14 days
{ measles	6 days
{ vaccinated when 4 months old with effect	8 days
F. 1, small pox—(natural—not vaccinated)	9 days
F. 1, variola, confluent	9 days
M. 13 weeks, variola with vibices and petechiæ (not vaccinated)	6 days
M. 3, small pox (not vaccinated)	10 days
F. 8 months small pox (not vaccinated)	10 days
no medical attendant	16 days
F. 9 months, variola	14 days
F. 6, { confluent small pox	4 days
{ bronchitis	4 days
whether vaccinated, could not be ascertained	10 days
M. 1, variola (not vaccinated)	21 days
F. 6, variola	14 days
M. 4, small pox (not vaccinated) 1st attack	6 days
F. 11, confluent, small pox (not vaccinated)	6 days
M. 9, small pox	6 days
apparently vaccinated some years ago, but imperfectly—vaccinated again 14 days ago, 4 days before the eruption	1 week
F. 8 months, variola (not vaccinated)	14 days
M. 2, { small pox	7 days
{ diarrhoea	7 days
second attack—vaccinated a year ago without effect	7 days
M. 9 months, small pox (not vaccinated—no medical attendant)	7 days
M. 13, variola—diarrhoea	7 days
F. 4, small pox	7 days
first attack—not vaccinated	12 days
M. 2, small pox (after vaccination)	10 days
M. 3, variola	14 days
F. 2, variola (not vaccinated)	14 days
F. 11 months, small pox (10 days after vaccination)	9 days
M. 8 months, small pox (not vaccinated)	14 days
M. 6 months, small pox (not vaccinated)	14 days
F. 4, small pox—convulsions	12 days
vaccinated 3 years ago without effect	12 days
F. under 1, variola	12 days

Typhus:—

PADDINGTON; St. John.	24 days
M. 20, typhus	24 days
took fever at Derby, where it is very prevalent, and died 3 weeks after his arrival in London	3 weeks
KENSINGTON; Town.	3 weeks
M. 52, fever	3 weeks
CHELSEA; South.	36 days
M. 49, { bilious remittent fever	4 days
{ typhus	4 days
North West.	10 days
M. 5, typhus	10 days
ST. GEORGE; MAY FAIR	10 days
M. 27, fever	10 days
Belgrave.	18 days
M. 32, typhus	18 days
WESTMINSTER; St. Margaret.	1 week
M. 2, typhus	1 week
ST. JAMES, WESTMINSTER; Berwick Street.	7 weeks
M. 11, typhus	7 weeks
Golden Square.	2 days
M. 35, febris	2 days
ST. MARYLEBONE; The Rectory.	2 days
M. 72, fever	2 days
M. 67, typhus	2 days
F. 33, typhus	2 days
M. 11, typhus	2 days
Christ Church.	7 days
F. 15, typhus	7 days
ST. PANCRA'S; Tottenham.	10 days
M. 1, fever	10 days
EDMONTON; Hampstead.	10 days
F. 55, { fever	10 days
{ pressure on the brain	10 days
{ frequent paralysis	10 days
ST. PANCRA'S; Camden Town.	10 days
F. 3, debility after fever	10 days
Regent's Park.	10 days
F. 37, { fever	10 days
{ acute insanity	10 days

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 6; pulmonary apoplexy, 1; disease of the heart, 2; intemperance, 1; other specified causes, 5; "natural death," "found dead," "visitation of God," &c., 10.—TOTAL, 25 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 39.

London H. (continued):—

M. 41, { ulceration of larynx	6 weeks
{ tubercular disease of both lungs	8 months
(p.m.) { fatty degeneration of kidneys—myristicated liver	8 months
M. 32 (post mort.), delirium tremens	4 days
serous effusion in the ventricles—great congestion of membranes of the brain—kidneys in the early stage of Bright's disease—myristicated liver	4 days
M. 42, suffocative catarrh	1 year
hypertrophy of the heart	1 year
F. 21, { synochus	17 days
{ deep purple congestion of lower intestines—nutmeg liver	17 days
(p.m.) { hæmorrhage from the bowels	2 days
ST. THOMAS' H.:—	
M. 36, ascites—cardiac disease	7 months
M. 38, phthisis	7 months
M. 27, gastro-enteritis—irritation—typhus	7 months
M. 36, dropsy	7 months
M. 38, phthisis with ascites	1 year
GUY'S H.:—	
M. 29, stricture	1 year
M. 42, lobulated liver	1 year
F. 49, dropsy—diseased heart	1 year

Guy's H. (continued):—

M. 28, phthisis	1 year
M. 34, malignant disease of the testicle	1 year
M. 30, hypertrophy of the heart—disease of aortic valves—ascites	1 year
ROYAL ORDNANCE H.:—	
M. 34, { disease of the knee-joint	91 days
{ erysipelas	91 days
M. 39, consumption	about 3 months
M. 29 (post mort.), fever	50 days
DREADNIGHT H.:—	
M. 28, { phthisis	1 year
{ diarrhoea	13 days
M. 19 (post mort.), phthisis	13 days
extensive cavities in each lung—consolidation of base of left lung	13 days
M. 62, { chronic bronchitis	12 days
(p.m.) { pneumonia of right lung	12 days
{ emphysema—extensive old adhesions of both pleura	12 days
M. 30, hypertrophy of heart with dilatation	12 days
(p.m.) { general dropsy	12 days
M. 25 (post mort.), hypertrophy of heart with dilatation—thickened aortic semilunar valves	9 days
M. 19 (post mort.), typhus	9 days
ulceration of Peyer's patches	9 days

Typhus, &c. (continued):—

BLACKNEY; Stamford Hill.	3 days
F. 52, typhus	3 days
ST. GILES-IN-THE-FIELDS; South.	6 weeks
M. 1, typhus	6 weeks
F. 38, low fever	6 weeks
North.	6 weeks
M. 30, typhus	6 weeks
F. 59, fever	6 weeks
F. 45, typhus	3 weeks
HOLBORN; St. Andrew, East.	2 weeks
F. 61, fever	2 weeks
Saffron-hill.	3 weeks
F. 4, fever—bronchitis	3 weeks
CLERKENWELL; Amwell.	3 weeks
F. 9, congestive fever	3 weeks
St. James.	6 days
M. 69, typhus	6 days
F. 21, typhus	3 weeks
ST. LUKE; Whitecross Street.	3 weeks
F. 33, typhus—bronchitis	3 weeks
EAST LONDON; Cripplegate.	10 days
M. 44, typhus	10 days
M. 45, continued fever—typhus	17 days
F. 7, { typhus	4 days
{ apoplexy	8 hours
CITY OF LONDON; North East.	a few days
M. 68, low fever	a few days
South West.	11 weeks
F. 14, typhus	11 weeks
SHOREDITCH; Holywell and Moorfields.	11 weeks
F. 46, fever—bronchitis—mucous-enteritis	11 weeks
St. Leonard.	7 days
F. 4, typhus	7 days
Haggerstone, West.	14 days
M. 37, typhus	14 days
F. 72, typhus	14 days
BETHNAL GREEN; The Church.	14 days
M. 1, fever—convulsions	14 days
F. 12, typhus	14 days
The Town.	3 weeks
M. 17, { continued fever	3 weeks
{ inflammation of the lungs	3 weeks
WHITECHAPEL; Spital Fields.	3 days
F. 11 months, fever—effusion on the brain	3 days
North.	14 days
M. 42, { typhoid fever	14 days
{ diarrhoea	14 days
F. 5, { typhus	14 days
{ cancerum oris	14 days
F. 33, fever	10 days
F. 47, typhus	16 days
Church.	11 days
F. 65, simple continued fever	11 days
ST. GEORGE-IN-THE-EAST; St. Mary.	10 days
M. 4, typhus	10 days
M. 50, typhus	10 days
STEPNEY; Limchouse.	5 days
M. 86, typhoid fever	5 days
Mile End, Old Town (Lower.)	11 days
F. 63, fever	11 days
ST. OLAVE; St. Olave and St. Thomas.	5 months
M. 4, { pertussis	1 week
{ typhus	1 week
ST. MARY, MAGDALEN, Bermondsey; Leather Market	12 days
F. 8, cold and low fever	12 days
St. Mary Magdalen.	20 days
F. 20, typhus	20 days
ST. GEORGE, SOUTHWARK; Kent-road.	1 month
F. 39, fever	1 month
Borough-road.	7 days
M. 9, { typhus	7 days
{ cancerum oris	7 days
F. 88, typhus	14 days
LAMBETH; Waterloo (first part).	17 days
M. 30, typhus	17 days
Lambeth Church (first part).	17 days
M. 14, icterus, typhoid	17 days
Lambeth Church (second part).	5 days
M. 2, typhus	5 days
M. 3, typhus	6 weeks
F. 9 months, typhus	14 days

Typhus, &c. (continued):—

LAMBETH; Kennington (second part).	12 days
F. 38, typhus	12 days
CAMBERWELL; Camberwell.	5 days
M. 4, simple fever, with congestion of the brain	5 days
F. 47, typhus	5 days
GREENWICH; Woolwich Arsenal.	8 weeks
M. 13, typhus with enteritis	8 weeks
F. about 70, fever and exhaustion	14 days
WANDSWORTH, ETC.; Wandsworth, &c.	14 days
M. 83, low fever	14 days
LEWISHAM; Plumstead and Charlton.	10 days
M. 25, fever	10 days
Infantile Remittent Fever:—	14 days
M. 1, { infantile fever	14 days
{ congestion of the brain	6 days
Syphilis:—	3 weeks
M. 3 weeks, syphilitic psoriasis	3 weeks
F. 10 weeks, syphilis	3 weeks
M. 15 days, congenital secondary syphilis	3 weeks
Malformation:—	3 weeks
M. 5 days, anus imperforatus	3 weeks
F. 11 days, (post mort.), anus imperforatus—rectum forming a cul-de-sac, adherent to the sacrum	3 weeks
M. 11 mons. { cyanosis	2 months
{ hooping cough	2 months
{ teething	3 weeks
F. 7 months, imperforate urethra	3 weeks
Hernia:—No deaths registered from this cause.	3 weeks
Diabetes:—	3 weeks
M. 7, diabetes—fever terminating in typhus	3 weeks
See Return of St. Bartholomew's Hospital.	3 weeks
Stone:—No deaths registered from this cause.	3 weeks
Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	7 days
F. 33, { childbirth	7 days
{ puerperal peritonitis	7 days
F. 29, puerperal fever	7 days
F. 26, { phlegmasia dolens	5 weeks
{ diarrhoea	5 weeks
{ pneumonia	5 weeks
after delivery attended by adhesion of placenta	5 weeks
F. 26, exhaustion from difficult labour	5 weeks
F. 28, { childbirth	9 days
{ inflammation—rapid effusion on the brain	9 days
F. 38, exhaustion after delivery	9 days
F. 31, puerperal mania	9 days
F. 27, puerperal fever	7 days
F. 33, puerperal peritonitis	9 days
F. 30, { childbirth	3 weeks
{ hysteritis	3 weeks
Disease and Childbirth:—	13 days
F. 30 (post mort.), childbirth	13 days
apoplexy of lungs—diseased heart	13 days
F. 34, { phthisis	9 months
{ miscarriage	2 days
Delirium Tremens:—	14 days
M. 28, { hæmoptysis	14 days
{ delirium tremens	7 days
M. 57, { delirium tremens	4 days
{ jaundice	3 days
See Returns of London Hospital.	3 days
Intemperance:—	3 days
F. 30 (inquest), natural death—fits, resulting from habits of intemperance	3 days
Privation:—No deaths registered from this cause.	3 days
Want of Breast-milk:—	3 days
M. 4 mon., atrophy—want of breast-milk	3 days
F. 6 weeks, atrophy—want of breast-milk	3 days
F. 2 weeks, debility from want of breast-milk	3 days
Purpura:—No deaths registered from this cause.	3 days
Hæmorrhage:—	2 weeks
M. 5 mon., epistaxis	2 weeks
Hæmatemesis:—	3 days
M. 58, hæmatemesis	3 days
F. 74, hæmorrhage from the liver	3 days
See Return of St. Bartholomew's Hospital.	3 days
Miscellaneous Cases:—	4 weeks
F. 6 wks., { vaccination	4 weeks
{ convulsions	30 hours
F. 76, cirrhosis of the liver, and ascites	30 hours
F. 6 mon. (post mort.), hydrocephalus	5 months
punctured three times	5 months

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			The sky was generally covered with cirrostratus, cumuli, and send throughout the day. Rain was falling at about 9h. a.m.
MON.			The sky was about one-half covered with cirrostratus and light clouds till 2h. p.m., and overcast during the remainder of the day. Rain was falling occasionally between 3h. and 10h. p.m.
TUES.	Positive and tension moderate from 1h. p.m. till 4h. p.m. This is the only instance of electricity being shown throughout the week.		Thin cirrostratus and haze generally covered about one-half of the sky throughout the day. At about noon, and at a little before midnight, it was cloudless.
WED.			Cirri and light clouds covered one-fifth of the sky between 11h. a.m. and 6h. p.m. At other times it was quite cloudless.
THURS.			Cloudless till 2h. a.m., but generally overcast during the remainder of the day.
FRID.			Overcast throughout the day. Rain was falling from 1h. a.m. till 6h. a.m., but it was so fine that no amount was shown by the rain gauges.
SAT.			Thin cirrostratus and send covered about one-third of the sky between 5h. a.m. and noon. Generally overcast at other times. Rain was falling for a short time at about 3h. 30m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The thermometer, whose bulb was placed in the full rays of the sun, is broken.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 46°7; and the mean reading at 7h. 30m. P.M., was 50°3; the mean readings at the Royal Observatory for the same times were 47°9 and 49°3 respectively.

† The mean direction of the wind for the week was S.S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, November 20th, 1847.

In Week ending Nov. 20th, causes of Deaths were:—

(1) Certified by written statement of Medical Attendant in .....	987 cases
(2) Attested by Coroner, or stated by him to be "natural," "sudden," or not ascertainable, in .....	33 "
(3) Stated to have had no medical treatment .....	20 "
(4) Not certified .....	46 "
Total .....	1086 "

Cases included under first and second heads show a proportion to the total number, equal to nearly 94 per cent. Under the fourth head are probably included some cases which had no medical attendance.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 46.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 20th. The following selection of cases is made from the returns for the week ending Nov. 13th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness; and when the place is supplied by an asterisk (\*), the Coroner, Medical Practitioner, or other Informant, has not been able to ascertain, or has omitted to state the time in which the person has been subject to the disease or injury which has proved fatal. In making the return, it should invariably be stated that duration of illness could not be ascertained, when this is the case.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation (continued):	duration
In London Hospital, labourer, 33, accidental from injured head and spine, by a fall from a ship at London Docks .....	3 days	Son of a labourer, 5, internal injuries from being forced against a post, at which he was playing, in Great Peter-street, by the wheels of a cart drawn by one horse .....	instant	Hawker of confectionery, 63, hanged himself in a temporary state of derangement.	
In London Hospital, labourer, 29, accidental death from the fall of a pear tree, causing fracture of ribs and spine .....	15 days	Wounds:—		Single woman, 31, suffocated accidentally in bed, being seized with epilepsy.	
In London Hospital, ship-joiner, 24, accidental by a fall from a ladder—injured spine .....	13 days	Clerk in a counting-house, 27, suicide by cutting his throat with a razor (being of unsound mind) .....	5 minutes	Daughter of a tailor, 5 months, suffocated by her face becoming imbedded in a pillow accidentally, when sleeping with her parents.	
In London Hospital, daughter of a ham-curer, 7, accidental from a fractured arm and a lock-jaw, caused by a fall .....	23 days	Drowning:—		Burns and Scalds	
F. 77, injuries to her head by an accidental fall down a flight of stairs .....	*	Wife of a waiter in a coffee-house, 26, drowning—found dead in the Thames at "Blind Dock"—no mark of violence.		In London Hospital, son of a labourer, 2, accidental from clothes taking fire in Long Alley .....	died the same day
M. 38 (no inq.), myelitis—paralysis of the lower extremities .....	7 years	M. (newly born), found dead in the Kensington canal—wilfully murdered by a person or persons unknown.		Son of a chair-maker, 3, burns by his clothes accidentally igniting, when he was taking a piece of paper from the fire.	
Son of a carpenter, 7 mon., convulsions resulting from an affection of the brain, caused by falling from his chair to the ground accidentally .....	6 days	M. 22, found dead in the Regent's Canal.		Poison:—	
The Registrar adds—"No medical aid was called in by the parents till the child was dying."		Joiner, 22, found dead without marks; apparently drowned.		M. 2 (no inq.), cephalitis, after eating several morphia lozenges .....	a week before
In London Hospital labourer, 34, fell and was run over by a waggon from his horse being frightened by a railway train .....	5 days	Waterman and lighterman, 28, found dead without marks of violence; apparently drowned.		Exposure:—	
In London Hospital, carman, 37, accidentally crushed in his abdomen by a fall from a cart at Wapping .....	2 days	Hanging and Suffocation:—		M. 10 hours, wilful murder against some person or person unknown, by wilfully exposing him to cold at his birth.	
		Mason, 22, suicide in insanity—hanged himself with a handkerchief to a hook in the wall of his bed-room—feet on the ground (suspended 30 min.)		Self-Neglect and Uncleanliness:—	
				M. 48, neglecting to provide for himself proper food, and breathing the impure air of a filthy room .....	*

SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

Consumption II:—No deaths registered.	duration	Middlesex II:—	duration	Fever II:—	duration
St. George's II:—		F. 50, cancer uteri .....	3 years	{ erysipelas .....	14 days
M. 65, disease of the bladder and kidneys .....	*	F. 62, intussusception .....	7 days	F. 54, { pericarditis and pleurisy .....	3 days

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			Generally overcast throughout the day.
MON.	No electricity was exhibited throughout the week.		Overcast till 4h. p.m. with light rain and mist falling occasionally. About one-fifth of the sky was covered with thin cirrostratus during the remainder of the day.
TUES.			The sky was nearly cloudless till 3h. a.m., and from 9h. p.m. till midnight. At other times it was overcast. Rain was falling from about 9h. a.m. till 2h. p.m. The arc of a faint lunar halo was visible at 7h. 20m. p.m.
WED.			The amount of cloud was very variable throughout the day, but the greater part of the sky was generally covered with cirrostratus and masses of scud, except from 11h. a.m. till 2h. p.m., and again at about 11h. p.m., when it was cloudless. There were several showers of rain during the afternoon.
THURS.			Overcast till 2h. a.m., but generally cloudless and hazy during the remainder of the day.
FRID.			Cloudless till 8h. a.m.: the greater part of the sky was covered with cirrostratus and haze from that time till 8h. p.m.: cloudless during the remainder of the day. It was very hazy during the evening.
SAT.			Cloudless but hazy till 2h. a.m. Cirrostratus covered the sky during the remainder of the day. A dense fog prevailed from 3h. a.m. till 8h. p.m., when it cleared off.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The thermometer, whose bulb was placed in the full rays of the sun, is broken.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Heury, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 39'6; and the mean reading at 7h. 30m. P.M., was 41'6; the mean readings at the Royal Observatory for the same times were 38'5 and 40'7 respectively.

† The general direction of the wind for the week was S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, November 27th, 1847.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 47.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 27th. The following selection of cases is made from the returns for the week ending Nov. 20th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Hanging and Suffocation (continued):	duration
F. 58, erysipelas, caused by a fall in a state of intoxication	15 days	In St. George's Hospital, M. 27 (no inquest), bite on the arm from a donkey—cellular cutaneous inflammation	7 days	Daughter of a carpenter, 15 weeks, suffocation accidentally caused in bed—found dead.	
Labourer, 68, concussion of the body, by falling accidentally down the scuttle-hole of a barge	*	Drowning:—		M. 27 days, found dead in his mother's arms, supposed from suffocation.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			The sky was generally overcast throughout the day. The air was very damp.
MON.			Cirrostratus and scud covered the sky throughout the day, except from noon till 4h. p.m., when it was generally about one-half covered with fleecy clouds and loose scud. Rain was falling occasionally during the early part of the morning.
TUES.			Overcast till 2h. p.m. Generally cloudless during the remainder of the day. Rain was falling heavily from 9h. a.m. till 0h. 30m. p.m.
WED.	Negative and tension moderate on Friday at noon, during rain. Nothing was shewn at any other times throughout the week.		The sky was generally about one-half covered with thin cirrostratus, scud, and haze, throughout the day, except from 5h. to 8h. p.m., when it was cloudless. A lunar halo was visible at 4h. a.m. Its radius by measurement was 22½°.
THURS.			Generally overcast with cirrostratus and scud throughout the day.
FRID.			Overcast throughout the day. Rain was falling steadily from 3h. a.m. till midnight.
SAT.			Overcast throughout the day. Rain was falling till 1h. 30m. a.m., and again from 4h. 20m. a.m. till 6h. 30m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The thermometer, whose bulb was placed in the full rays of the sun, is broken.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

• In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 45°3; and the mean reading at 7h. 30m. P.M., was 47°8; the mean readings at the Royal Observatory for the same times were 46°0 and 45°4 respectively.

† The general direction of the wind for the week was S.S.W.

# Births and Deaths registered in London,

During the Week ending Saturday, December 4th, 1847.

DAY	ELECTRICITY	GENERAL REMARKS
SUN.		Overcast with rain falling at intervals throughout the day. The barometer readings were very low this day, the minimum being 26.617 in., and occurring about 3h. p.m.
MON.		Cirrostratus, fleecy clouds, and a few cumuli covered about one half of the sky till 2h. p.m.; cloudless during the remainder of the day.
TUES.		Generally overcast, with rain falling at intervals throughout the day.
WED.	Positive and tension weak on Friday at 1h. 20m. p.m., and on Saturday from 9h. a.m. till 2h. p.m.	Overcast, with rain falling generally till 6h. a.m. The sky was mostly cloudless during the rest of the day. There was a gradual rise in the barometer from Nov. 28th, at 3h. p.m. till this day (Dec. 1st) at 10h. p.m., when the maximum (30.237 in.) took place.
THURS.	Nothing was abewn at any other times throughout the week.	Nearly cloudless at 1h. a.m., and from 9h. a.m. till about noon; at other times the sky was overcast. Rain was falling in the evening.
FRID.		Overcast throughout the day. Rain was falling from 3h. p.m. till midnight. The temperature was remarkably high.
SAT.		Most of the sky was free from cloud from 5h. a.m. till noon,—at other times it was overcast. Rain was falling occasionally in the evening. There was a great fall in the readings of the barometer on this day. At 9h. a.m. the reading was 29.857 in., and it fell to 29.376 in. by 11h. 20m. p.m., and was then still falling. During the evening a gale of wind was blowing from the S.W. At 8h. 15m. and 9h. 35m. pressures of 4.5lbs. were recorded at the Anemometer, and at 11h. 53m. a pressure of 5lbs. was recorded.

## NOTE BY MR. GLAISHER.

The month of November was remarkable on account of the mean temperature of the air, being very different from the average for the season (the deviation from the average temperature being great and continuous); and for a period of cold between the 17th and 21st days.

From the 1st to the 16th inclusive, the temperature of the air was high every day, the departure from the average being in excess, the mean amount of which was 5°4. From the 17th to the 21st, both days inclusive, the temperature of the air was low, and below the average for the season, every day; its mean amount of depression below the average was 5°7. From the 22nd to the end of the month, the temperature was again high, and its mean amount of elevation above the average was 5°0.

On November 15th the temperature was high, the extremes were 48°5 and 57°5, and the average for the day was 53°; this high temperature continued throughout Monday night, and till noon on Tuesday the 16th. At this time there was a remarkable darkness, to such extent as to render the use of candles necessary; during its continuance the direction of the wind suddenly changed from the W. to the N. From this time the temperature of the air declined rapidly, and before midnight it was at 39°. During Wednesday the 17th, the temperature of the air was low, and during the day there was but little change, and its average value was 37°. The night following was very cold, and the temperature of the air on the morning of the 18th was as low as 29°; it did not rise above 41° during the day, and it sank to 24° during the following night. On November 19th the temperature of the air did not reach the point 32° till 11 a.m., and it did not pass this point till after noon; at 1h. p.m. it was 33°; at 19th was 30°2 being no less than 22°8 below that on the 15th, i.e. four days only before this day. This great change of temperature was very painful. The extreme change amounted to 34°5, it having been at both 24° and 58°5, between the 15th and 19th days. On November 20th there was a dense fog all day; the temperature of the air was below 32° till noon, after this time it slowly increased, and it had nearly reached 40° by midnight. The 21st day was cloudy throughout; the air was nearly saturated with moisture all day, and there was but little change of temperature. After this day the character of the weather was similar to that at the beginning of the month, viz., a high temperature; an unusual quantity of water held in solution in the atmosphere, which was nearly always saturated. The degree of humidity for the month was 0.9 when complete saturation is represented by unity.

The pressure of the atmosphere was great till the 7th, and on the 8th the reading of the barometer declined rapidly, and it increased as quickly on the 9th; it then continued high till the 20th; on the 21st it declined rapidly and to a low point; and was low on the 22nd, it began to increase on the 23rd; it fell rapidly on the 26th, and was very low on the 27th, and continued rather low till the end of the month.

# Births and Deaths registered in London,

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension moderate at every examination.	The greater part of the sky was covered with cloud till noon. Cloudless during the remainder of the day. Rain was falling very heavily between 5h. 50m. and 5h. a.m. At 6h. 30m., 2h. 45m., and 3h. 20m. a.m. pressures of 9 lbs. on the square foot were shown on the anemometer.
MON.	The apparatus was under repair from 6d. till 7d. 6h.	The sky was cloudless between 5h. and 10h. p.m. Generally overcast at other times. It was squally throughout the day. Many flashes of lightning were seen between 6h. p.m. and midnight. A gale of wind was blowing throughout the day.
TUES.	Nothing was shewn from noon till midnight.	Generally overcast throughout the day. The minimum reading of the barometer took place at 2h. 35m. a.m., and was 28.381 in. It remained at this reading till 2h. 50m. a.m. A gale of wind was blowing throughout the day.
WED.	Positive and tension generally strong from 7h. a.m. till midnight. Nothing was shewn at any other times during the day.	The greater part of the sky was cloudless till 6h. p.m. Overcast during the remainder of the day.
THURS.	Positive and tension weak at 1h. 20m. a.m., and at 7h. 20m. a.m. Negative and tension moderate from 2h. to 6h. a.m. during rain.	Generally overcast throughout the day. Rain was falling till 6h. 30m. a.m.
FRID.	Nothing was shewn throughout the day.	Overcast throughout the day, except at a little before midnight, when it was nearly cloudless. Fine drizzling rain was falling during the morning.
SAT.	Positive and tension occasionally strong from 9h. till midnight.	Overcast till 6h. p.m. Cloudless during the remainder of the day.

REMARKS ON THE WEATHER OF THE FIRST ELEVEN DAYS OF DECEMBER, 1847.—By MR. GLAISHER.

On December 1, there were unusual changes of temperature of the air; the temperature during the preceding night was high, and generally above 50°; towards sun-rise, on the sky becoming free from cloud, it began to decline and continued doing so till very nearly noon, at which time it was 40°; at 1h. p.m., it had increased to 50°, and continued at nearly this point till after 4h. p.m.; it then began to decline, and at midnight it was as low as 38°, and after midnight it declined to 31°. On Tuesday the sky became cloudy, and the temperature increased from 40° at 7h. a.m., to 56° at midnight, it did not decline below 55° during the night. On the 3rd, the sky was clouded throughout the day, the temperature was high and nearly uniform, till after 8h. p.m., between which time and midnight it declined from 53° to 41°. On the 4th the temperature of the air increased till 1h. p.m., at which time it was 50°, and it continued very nearly at this point throughout the remainder of the day; after midnight it declined to 41°. The highest point reached on the 5th was 47°, and this decreased to 37° by 11h. p.m.; after this time the temperature increased rapidly all night, and at 7h. a.m., on the 6th was 53°, and from this time it slowly declined during the day, and at midnight was 41°. The 7th day was cold, and there was but little change of temperature during the day. On the morning of the 8th the temperature was 32°, which increased to 41°, by 1h. p.m., and decreased to 31°, by 7h. p.m.; at 8h. p.m., it had increased a little; at 9h. p.m., it was 36°, and from this time it increased all the night, and at 1 h. p.m., on the 9th it was 50°, being 25° higher than it was 18h. previously. The period of time between the 9th at 2h. p.m., and the 11th at 2h. p.m., was remarkable both for the high temperature and its uniformity, the extremes between those times being 50° and 54°. After 1h. p.m., on the 11th the temperature declined from 51° to 39° by midnight.

From the preceding remarks it will be seen that the usual uniform rise and fall of temperature during the day has frequently been reversed. The reading of the barometer was high on the 1st and 2nd, during the 3rd it decreased about a quarter of an inch, and on the 4th it further decreased half an inch, on the 5th it was low all day, and on the 6th it was remarkably low, (see the usual Meteorological Report for this week,) and it has continued rather low till the end of the 11th day.

The following shews the comparative Meteorology for the first eleven days in December, since the year 1841.

Period from December 1st, to December 11th, both Days inclusive	Years,						Excess in the Year 1847, above that in the Years					Mean Excess

DAY	ELECTRICITY	GENERAL REMARKS
SUN.		The sky was occasionally cloudless till 4h. p.m. At other times it was mostly covered with cirrostratus, badly formed cumuli, and fleecy clouds.
MON.		The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read each day at 6h. 39m. a.m., was 43°·9; and the mean reading at 7h. 30m. p.m. was 49°·3; the mean readings at the Royal Observatory for the same times were 47°·7 and 47°·5 respectively.
TUES.		Cloudless till 4h. a.m., and from 11h. a.m. till 4h. p.m. Generally overcast at other times.
WED.	Weak positive Electricity was shewn at different times, on every day throughout this week.	Overcast till 11h. a.m. Generally cloudless during the remainder of the day.
THURS.		Cloudless till noon. Generally overcast during the remainder of the day. Slight rain was falling from 9h. till midnight.
FRID.		The sky was about one-half covered with cloud from 1h. p.m. till 10h. p.m. At other times it was overcast.
SAT.		Generally overcast throughout the day. Thin rain was falling at intervals. The magnets were very much disturbed throughout the day. The wind blew strongly nearly throughout the day.
		Overcast throughout the day. Slight rain was falling during most of the day. At 7h. 20m. p.m. the minimum reading of the barometer took place, being 29.224 in. It then began to rise, and at midnight the reading was 29.304 in.

REMARKS ON THE WEATHER DURING THE WEEK ENDING DECEMBER 18.—By MR. GLAISHER.

On Sunday, December 12, the temperature of the air early in the morning was 35°, which increased to 51°·5 during the day, and decreased to 42° by midnight. On Monday the temperature of the air was 40° in the morning; it was 52° at 1h. p.m.; it was 47° at 3h. p.m.; it was 43° at 5h. p.m., and continued at this value throughout the following night. On Tuesday it had increased to 46° only by 11h. a.m.; at 1h. p.m., it was 50°; at 3h. p.m., it was 47°; at 5h. p.m., it was 43°; and remained at about this reading till midnight, after which time it decreased to 37°·5. On Wednesday, December 15, at 1h. p.m., the temperature of the air was 51°·4, and from this time till Saturday morning, December 18, at 7h. a.m., the temperature of the air was remarkable both for its very high value and its uniformity; the extreme difference between these times was 6° only, and the extreme thermometrical readings were 48° and 54°; but the durations of these extreme readings were very short. On Saturday, after 7h. a.m., the temperature declined all day, and was at 40° at midnight; it further decreased to 30° on Sunday morning, being 25°·5 less than it was at the same time the previous day. It will, therefore be seen, that the usual diurnal rise and fall of temperature has only taken place on one day during this week, viz., on Sunday, December 12. The temperature throughout the week has been greatly above its average for the season. The temperature of the dew point has been about 3° below that of the air throughout the week; but it has frequently happened that the largest differences between these temperatures have occurred during the evening or night hours, and not during those of the day. The amount of water mixed with the air has been unusually large. The following are the average weights each day contained within a cubic foot of air:— Sunday, 3.5 gr.; Monday, 3.5 gr.; Tuesday, 3.4 gr.; Wednesday, 3.6 gr.; Thursday, 3.7 gr.; Friday, 3.9 gr.; and Saturday, 3.3 gr.; but during the morning hours of Saturday, there were above 4 grains in the same mass of air. The whole mass of air this week has passed over from the S.; and during Friday and Saturday its velocity was such as almost to amount to a gale. On Sunday the reading of the barometer increased during the day; and it was moderately high during Monday, Tuesday, and Wednesday. On Thursday it decreased by above one-tenth of an inch; on Friday it further decreased two-tenths of an inch; and on Saturday it still further decreased four-tenths of an inch, and its reading was rather low. (See the usual Meteorological return for this week). The following table shows the comparative Meteorology of each year since 1841.

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HEMORRHAGE, ELEMATEMESIS, ETC.

**Small Pox:—**

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

F. 2, small pox—previous vaccination. . . . . 7 days  
 M. 16 months, confluent small pox. . . . . 14 days not vaccinated.  
 F. 1, { small pox . . . . . 21 days  
       { pneumonia . . . . . 10 days not vaccinated.  
 F. 11, natural small pox . . . . . 10 days  
 F. 3 months, small pox . . . . . 9 days first attack—not vaccinated.  
 M. 8, small pox (not vaccinated). . . . . 3 weeks  
 M. 18 months, small pox . . . . . 8 days  
 F. 3, small pox . . . . . 14 days without previous vaccination.  
 F. 21 months, small pox . . . . . 11 days not vaccinated.  
 M. 9, variola . . . . . 7 days after vaccination.  
 M. 1, { variola . . . . . 7 days  
       { pneumonia . . . . . \* without previous vaccination.  
 M. 18, small pox . . . . . 11 days first attack—not vaccinated.  
 M. 3 weeks, small pox (not vaccinated). . . . . \*  
 M. 15 months, small pox . . . . . \* was vaccinated about 7 weeks ago without effect; symptoms of the disease about 14 days before death.  
 M. 8 months, small pox . . . . . \*  
 F. 4 months, not vaccinated. . . . . \*  
**Chicken Pox:—**  
 M. 6 months, chicken pox. . . . . 4 days

**Syphilis:—**

F. 27, { secondary venereal disease. . . . . \*  
       { severe disease of the bronchia and lungs . . . . . \*  
 F. 24, { syphilis—ulceration of larynx and trachea—edema of glottis—died suffocated . . . . . \*  
 (p. n.) {  
 M. 3 months, syphilis . . . . . \*

**Malformation:—**

F. 2 weeks, spina bifida—convulsions. . . . . 5 hours  
 M. 3 days, imperfect rectum—operation afforded temporary relief . . . . . \*  
 M. 15 days, (post mort.), congenital contraction of the colon . . . . . \*  
 F. 2, deformed chest—pneumonia—ill from birth . . . . . \*

**Hernia, Diabetes, and Stone:—**

No deaths registered from these causes.

**Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.**

F. 22, childbirth—puerperal fever . . . . . 8 days  
 F. 27, { childbirth . . . . . 8 days  
       { puerperal peritonitis . . . . . 7 days  
       { childbirth . . . . . 23 days  
 F. 24, { puerperal mania . . . . . 7 days  
       { bronchitis . . . . . 3 days  
 F. 19, puerperal peritonitis—childbirth. . . . . 7 days  
 F. 43, abortion—phlegmasia dolens. . . . . 3 days confined . . . . . 12 days  
 F. 44, { acute pleuritis . . . . . 6 days  
       { effusion into the left pleura and pericarditis . . . . . 24 hours  
 F. 33, { puerperal fever . . . . . \*  
       { uteritis . . . . . 3 days  
 F. 32, { phlebitis . . . . . \*  
       { post parturition . . . . . 1 week  
 F. 34, haemorrhagia uteri . . . . . \* (query, in childbirth?).  
 F. 37, childbirth. . . . . \*  
 F. 40, phlegmasia dolens . . . . . 10 days  
 F. 22, puerperal peritonitis . . . . . 30 hours (four days after childbirth).  
 F. 31, (inquest), died in labour suddenly—natural.  
**Childbirth and Disease:—**  
 F. 40, an epileptic patient . . . . . died in 10 days after delivery of a premature child.

**Delirium Tremens:—**

F. 46, { delirium tremens . . . . . 6 days  
       { epileptic fits . . . . . \*  
 M. 39, delirium tremens . . . . . 1 month  
 M. 30, delirium tremens . . . . . 8 days  
 M. 48, delirium tremens . . . . . 10 days  
 M. 42, { (p. m.) delirium tremens . . . . . \*  
       { disorganized liver. . . . . \*  
 M. 65, delirium tremens . . . . . \*

**Delirium tremens and diseased Heart:—**

M. 33, (inquest), natural death from diseased heart, and delirium tremens. . . . . \*

**Intemperance:—**

M. 58, (inquest), inflammation of veins of left arm, caused by habits of drunkenness . . . . . \*  
 M. 55, (inquest), whether from intoxicating liquors, natural disease, or an accidental fall—unknown.

**Privation:—**

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Nothing was shewn during the morning. Positive and tension moderate in the afternoon.	The sky was generally about one-half covered with cirri, fleecy clouds and scud till 4h. p.m., and overcast during the remainder of the day.
MON.	Positive and tension moderate from 8h. a.m., to 6h. a.m., and tension strong from 4h. p.m. till midnight. Nothing was shewn at any other times.	Overcast throughout the day. The magnets were disturbed during the day.
TUES.	Positive and tension strong throughout the day, except at about 7h. a.m., when nothing was shewn.	Overcast throughout the day. The magnets were disturbed during part of the day.
WED.	Nothing was shewn from 5h. a.m. till 8h. a.m. At other times it was positive with strong tension.	Overcast throughout the day.
THURS.	Positive and tension strong throughout the day.	Overcast throughout the day. Fine rain began to fall shortly before midnight.
FRID.	*Negative and tension moderate at 5h. 20m. p.m. during rain. At other times it was positive, and tension generally strong.	Overcast throughout the day. A fine rain was falling occasionally.
SAT.	Positive but tension weak at each examination.	Overcast throughout the day. A fine rain was falling occasionally.

The air was generally in a calm state throughout the week.

During the months of September, October, November, and December, till the 20th day, the amount of Electricity was very small, as shewn by the several Instruments, and during this time the apparatus was frequently examined and at all times was found to be in a satisfactory state. On December 20, active positive electricity was shewn all the day, and the electricity has been very active since that time, generally recovering the same degree of tension within five minutes after being discharged.

REMARKS ON THE WEATHER DURING THE WEEK ENDING DECEMBER 25, AS OBSERVED AT BLACKHEATH.—By MR. GLAISHER.

On Sunday, December 19, the temperature of the air early in the morning was 30°, which increased to 49° by 11h. p.m., and decreased to 40° by 7h. p.m.; after which time it slightly increased, and was 41° at midnight. On Monday it decreased slowly throughout the day, from 41° early in the morning to 35° at midnight, and continued to decrease till 7h. on the morning of Tuesday, at which time it was 32°, it then slightly increased to 34°5 at 3h. p.m., after which it decreased to 33° by 10h. p.m., and increased to 33°5 by midnight. On Wednesday, December 22, there was only a change of 2° in the temperature of the air throughout the day, and its average value was 32°3, being 19°2 less than that of the 17th instant. On Thursday, December 23, the temperature of the air was 33° in the morning, which increased to 38° by 1h. p.m., and decreased to 35° at 4h. p.m., from which time it increased to 37°5 by midnight. On Friday the temperature of the air increased from 37°5 early in the morning to 40° at 1h. 30m. p.m., from this time it decreased to 36° at 9h. p.m., and then increased to 38° by midnight. On Saturday, December 25, the temperature of the air was 38°5 in the morning, which increased to 40° by 3h. p.m., and it remained at this value without any change till midnight.

From these remarks it will be seen that the usual diurnal rise and fall of temperature has only taken place on one day this week, viz., on Sunday, December 19.

The average temperature for each day was as follows:—

Sunday, 39°6; Monday, 37°8; Tuesday, 33°3; Wednesday, 32°3; Thursday, 35°7; Friday, 38°2; and Saturday, 38°. The difference of temperature during each day from Monday has been very small; it was as follows:—Monday, 5°5; Tuesday, 2°5; Wednesday, 3°5; Thursday 5°3; Friday, 4°3; and Saturday, 4°. The period between Sunday, December 19, at 7h. p.m., and Saturday, December 25, at midnight, was remarkable, on account of the great uniformity of temperature, the extremes between these times were 30°5 and 40°5, and during this period the sky was wholly covered by cirrostratus and scud; and with the exception of the moon having been seen on Friday morning for a few minutes only, no celestial object whatever has been seen during the week.

The average temperature of the dew point on each day has been as follows:—

Sunday, 36°6; Monday, 35°3; Tuesday, 30°3; Wednesday, 30°8; Thursday, 29°3; Friday, 36°2; and Saturday, 36°. The average amount of water contained within a cubic foot of air was as follows—Sunday 2·7 gr.; Monday 2·7 gr.; Tuesday 2·2 gr.; Wednesday 2·3 gr.; Thursday 2·1 gr.; Friday 2·7 gr., and Saturday 2·7 gr. The air has been in gentle motion throughout the week, its direction on Monday changed to N., and since then it has passed from E.N.E.; N.N.E.; E.S.E. and E., but during Wednesday and Thursday the air was nearly in a calm state. The weather during this week is very different from that of the preceding week, both with respect to its temperature and humidity, as well as in the direction of the wind.

The following table shows the comparative Meteorology since the year 1841.

Week ending December 25.	In the Years,						Excess or deficiency in the Year 1847, above or below that in the Years*					Mean values less in the Year 1847
	1842	1843	1844	1845	1846	1847	1842	1843	1844	1845	1846

{ influenza	*
LEWISHAM; Lewisham Village.	
F. 43, { influenza	2 weeks
{ enlarged liver, and tuberculous lung	some years
Sydenham.	
M. 62, influenza	*

NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending December 25th; for all returns in which it is named, though in complication with other forms of disease, have almost without exception been classed under this epidemic.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 48; disease of the heart, 4; intemperance, 1; privation, 1; other specified causes, 10 "found dead," "natural death," "visitation of God," &c., 16—TOTAL, 80 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 27.

26 SEP 1942

**RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—**

<i>Fractures and Contusions (continued):—</i>	<i>duration</i>	<i>Drowning (continued):—</i>	<i>duration</i>	<i>Burns and Scalds (continued):—</i>	<i>duration</i>
Carrier, 36, injuries from being accidentally run over by a carrier's cart, out of which he jumped and fell.		Engineer, 27, accidentally drowned in the river Thames, by being drawn overboard in a coil of rope.		In Guy's Hospital, son of a machine-driver, 2, scalded by attempting to drink a cup of hot mutton fat.	18 days
M. 57, injuries on the head, but how caused not known.		F. 7, accidentally drowned in the river Ravensbourne, by falling therein.		Spinster, 73, injuries from being burnt, but how the fire originated no evidence to prove.	
Daughter of a teacher of languages, 4 months, concussion of the brain, from an accidental fall from a small bed, whilst the nurse was asleep.	1 hour	<i>Hanging and Suffocation:—</i>		<i>Poison:—</i>	
<i>Wounds:—</i>		Butcher, 41, hanging himself by a cord to a bed-post, his feet not being off the ground—found dead—temporary insanity.		A waiter, M. 37, poisoned himself in a temporary state of insanity, with essential oil of bitter almonds.	*
Captain in the army, 26 (no ing.) injury to spinal cord by a shot, in India—1½ year paralysis and sloughing of the back.	*	Fisherman, 46, suffocation by carbonic acid gas, from being shut up in a cabin with a fire.		Labourer in an iron-foundry, 51, poisoned himself with laudanum in a temporary state of insanity.	1 day
Wife of a broker's man, 55, cut her throat in a temporary fit of insanity.	*	A pauper, M. 78, found hanging—suicide—state of mind unknown.		In Guy's Hospital, son of a plumber, 19, taking arsenic, being at the time in a state of temporary insanity.	6 days
In Guy's Hospital, millwright, 38, fever brought on by a wound on the left thigh, which had been torn by machinery.	15 days	<i>Burns and Scalds:—</i>		Wife of a pensioner, 58, suicide—poison—2 drachms of powder of nux vomica—imbecility	7 hours
In Guy's Hospital, a widow, 28, cutting her throat with a razor, at Deptford—temporary insanity.	12 days	F. 1, {burn .....	3 weeks	Widow, 63, suicide by laudanum—temporary derangement.	
<i>Drowning:—</i>		no ing. {influenza .....	2 days	Daughter of a dairyman, 2, congestion of venous blood in the heart and brain, whether produced by morphia given in a medicine prescribed by a druggist, or natural causes accompanying scarlatina, not discoverable.	
F. servant, 22, found drowned in the waters of the Victoria Park.		Son of a hawker, 4, burns from his clothes taking fire at a grate, while with a fishing-rod imitating the sweeping of a chimney by a soot machine.	3 hours	(Classed under Scarlatina in abstract).	
Barge-man, 23, accidentally drowned by the upsetting of a boat.		In Guy's Hospital, daughter of a labourer, 3, burned by her clothes taking fire at Longwalk, Bermondsey-square.	18 hours	<i>Other Means:—</i>	
A sea-apprentice, 18, accidentally drowned by a fall from a ship's side into the dock.		In St. Thomas' Hospital, daughter of a labourer, 18, burned by her clothes taking fire whilst in a fit at Peckham.	5 days	F. newly born, loss of blood and neglect at birth, without medical aid, and so murdered by some person unknown.	
Mariner, 25, accidentally drowned in the river Thames by falling overboard from a barge—under water 24 hours.		In Guy's Hospital, son of a labourer, 9 mon., burned by his clothes taking fire at Vauxhall-road.	9 days	M. 70, sudden—natural death, which may have been accelerated by bathing in warm water.	

**SIXTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.**

NOTE.—Deaths in hospitals from fractures, wounds, burns, scalds, poison, are not contained in this list. See deaths by violence.

DAY	ELECTRICITY	GENERAL REMARKS	
SUN.	Positive and tension moderate at each examination.	Overcast throughout the day. Fine rain was falling during the morning.	<p>The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.</p> <p>The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The former is under comparison with a standard thermometer.</p> <p>Wheeler's anemometer has been under repair throughout this week.</p> <p>The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.</p> <p>* In reading the 16th column, it will be borne in mind that + is read "higher;" and "lower," than the average.</p> <p>The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the main-mast, and read each day at 6h. 30m. A.M., was 31.5; and the mean reading at 7h. 30m. P.M. was 35.8.</p>
MON.	Positive at each examination at 5h. p.m.; the electricity was very active.	Overcast throughout the day.	
TUES.	Positive at each examination except at 1h. 20m., when it was negative with strong tension, during rain.	Overcast throughout the day; at about 6h. a.m. some snow fell, being the first that has fallen here this season. At 1h. 10m. p.m. a shower of small hail fell. It lasted but a short time.	
WED.	Positive and tension moderate at each examination. The maximum occurred at 11h. a.m.	Overcast throughout the day, with the exception of some time early in the morning.	
THURS.	Negative and tension very strong at each examination. Frequent sparks and galvanic currents were exhibited.	Overcast throughout the day. Rain was falling from 8h. a.m. till midnight; at times, before 2h. p.m. heavily.	
FRI.	Positive and tension generally moderate at each examination.	Overcast throughout the day. Rain was falling during the early part of the morning.	
SAT.	Positive and tension generally strong at each examination.	There were occasional breaks in the clouds between noon and 6h. p.m. At other times the sky was overcast.	

REMARKS ON THE WEATHER DURING THE WEEK ENDING JANUARY 1, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, December 26, the temperature of the air early in the morning was 37.5, which decreased to 36.2 by 8h. A.M., and increased to 37.2 by 1h. P.M., at which value it remained for some hours, and decreased to 34° by midnight. On Monday it was 33° till 8h. A.M., it then slowly increased to 38° by noon; at 1h. P.M. it was 36.5, at which value it continued without change till midnight. On Tuesday, December 28, the temperature of the air was 36.5 early in the morning, which decreased to 35.6 by 7h. A.M.; at 8h. A.M. some snow fell, being the first which has fallen this season at this part of the country; after this some rain fell, and at 1h. P.M. some hail fell; the temperature of the air at the time was 36.5, which decreased to 35.2 by 3h. P.M., and to 33° by 5h. P.M., at which value it continued till midnight. During a part of the morning of Wednesday the sky was partially free from cloud, and the temperature of the air descended to 26.5, a point lower than any since the 18th day of April, 1847, and at the time a thermometer placed on grass read 19°; at 11h. A.M. the temperature of the air was 33°; at 1h. P.M. it was 35°, and it continued to increase slowly till 5h. P.M., at which time it was 36°, and it continued at this value till after 7h. P.M.; at 8h. P.M. it was 35°, and after 9h. P.M. it began to increase, and was 37.5 at midnight. On Thursday, December 30, the temperature of the air was 38° till 7h. A.M., after which it increased to 40° by 11h. A.M.; it then began to decrease, and was 39° at noon; and was 37° at 1h. P.M.; at 2h. P.M. the direction of the wind was S., and it then veered by the E. to the N. by 2h. 30m. P.M., and the temperature decreased to 35°, and still further decreased till 6h. P.M., at which time it was 34°; it then began to increase, and was 38° at midnight. Rain was falling on this day from 8h. A.M. till 2h. P.M. at times rather heavily. On Friday, December 31, there was only a change of 2° in the temperature of the air throughout the day, and its average value was 35.3. The day was gloomy and dull. On Saturday, January 1, 1848, the temperature of the air was 31.5 early in the morning, which increased to 38° by 2h. P.M., and decreased to 32° by 6h. P.M., (at this time the sky was partially free from cloud); at 7h. P.M. it was 34°, and it continued at this value till midnight, the sky being overcast during this interval; and at times a thin misty rain was falling. The general character of this week has been in almost all particulars similar to that of the preceding week; its temperatures have, however, been somewhat lower. The average temperature of the air for each day was as follows:—

Sunday, 35.7; Monday, 35.3; Tuesday, 34.7; Wednesday, 31.3; Thursday, 37.5; Friday, 35.3; and Saturday, 34.3.

The difference of temperature during each day has been small; it was as follows:—Sunday, 3.3; Monday, 5.5; Tuesday, 3.5; Wednesday, 9.5; Thursday, 5.0; Friday, 2.5; and Saturday, 5.7. The difference of temperature during the week was 13.5, the extremes being 26.5 and 40°. During the week the sky was, with very slight exceptions, wholly covered by cirrostratus, and therefore, the period between December 19, 1847, at 7h. P.M., and January 1, 1848, at midnight, was remarkable for the clouded state of the sky, and it is the longest period of cloudy weather in the year 1847. The air during the week was frequently saturated with moisture, and at all times, except on Wednesday, it was nearly in that state, so that the temperature of the dew point has been but little below that of the air; the following is its average value each day:—

Sunday, 33.1; Monday, 31.1; Tuesday, 32.1; Wednesday, 26.5; Thursday, 35.5; Friday, 33.4; and Saturday, 32.5; consequently, the average amount of water contained within a cubic foot of air, was as follows:—

Sunday, 2.5 gr.; Monday, 2.3 gr.; Tuesday, 2.5 gr.; Wednesday, 2.0 gr.; Thursday, 2.6 gr.; Friday, 2.5 gr.; Saturday, 2.4 gr. The air has been in gentle motion, and it has passed from the N. and E., except in parts of Wednesday and Thursday, when it passed from the S.

The following table shows the comparative meteorology since the year 1842:—

Week ending January 1.	In the Years,						Excess or deficiency in the Week ending 1848, January 1, above or below that in the Years *					Mean values less in the Week end- ing 1848, Jan. 1.
	1843	1844	1845	1846	1847	1848	1843	1844	1845	1846	1847	
Temperature of the Air	41.9	42.2	36.7	43.7	29.9	34.9	-10.0	- 7.3	- 1.8	- 8.8	+ 5.0	4.6
Temperature of the Dew Point	42.5	40.4	35.0	38.8	24.4	32.0	-10.5	- 8.4	- 3.0	- 6.8	+ 7.6	4.2
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	3.4	2.8	2.7	3.0	1.8	2.4	- 1.0	- 0.4	- 0.3	- 0.6	+ 0.6	0.3

\* In reading this table, it will be borne in mind that the minus sign (-), implies that the following number is read thus:—the temperature of the week ending 1848, January 1, was 10.0 below the temperature of the corresponding week of 1843, &c., &c.
